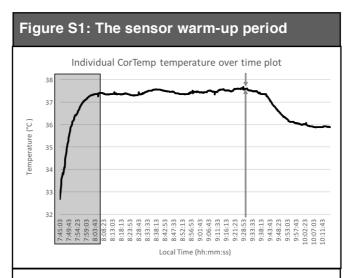

Figure S1: The sensor warm-up period. The figure demonstrates how the sensor warm-up period was identified in the data.

The figure represents a section of the raw CorTemp data plot for participant number fourteen. The grey arrows indicate the time of spinal anesthetic injection at 09:29:00. After ingestion the CorTemp sensor requires time to warm up to the surrounding tissue temperature. For each participant the warm-up period (grey shaded area) was identified by visual inspection and cut from the CorTemp data prior to statistical analysis.
