

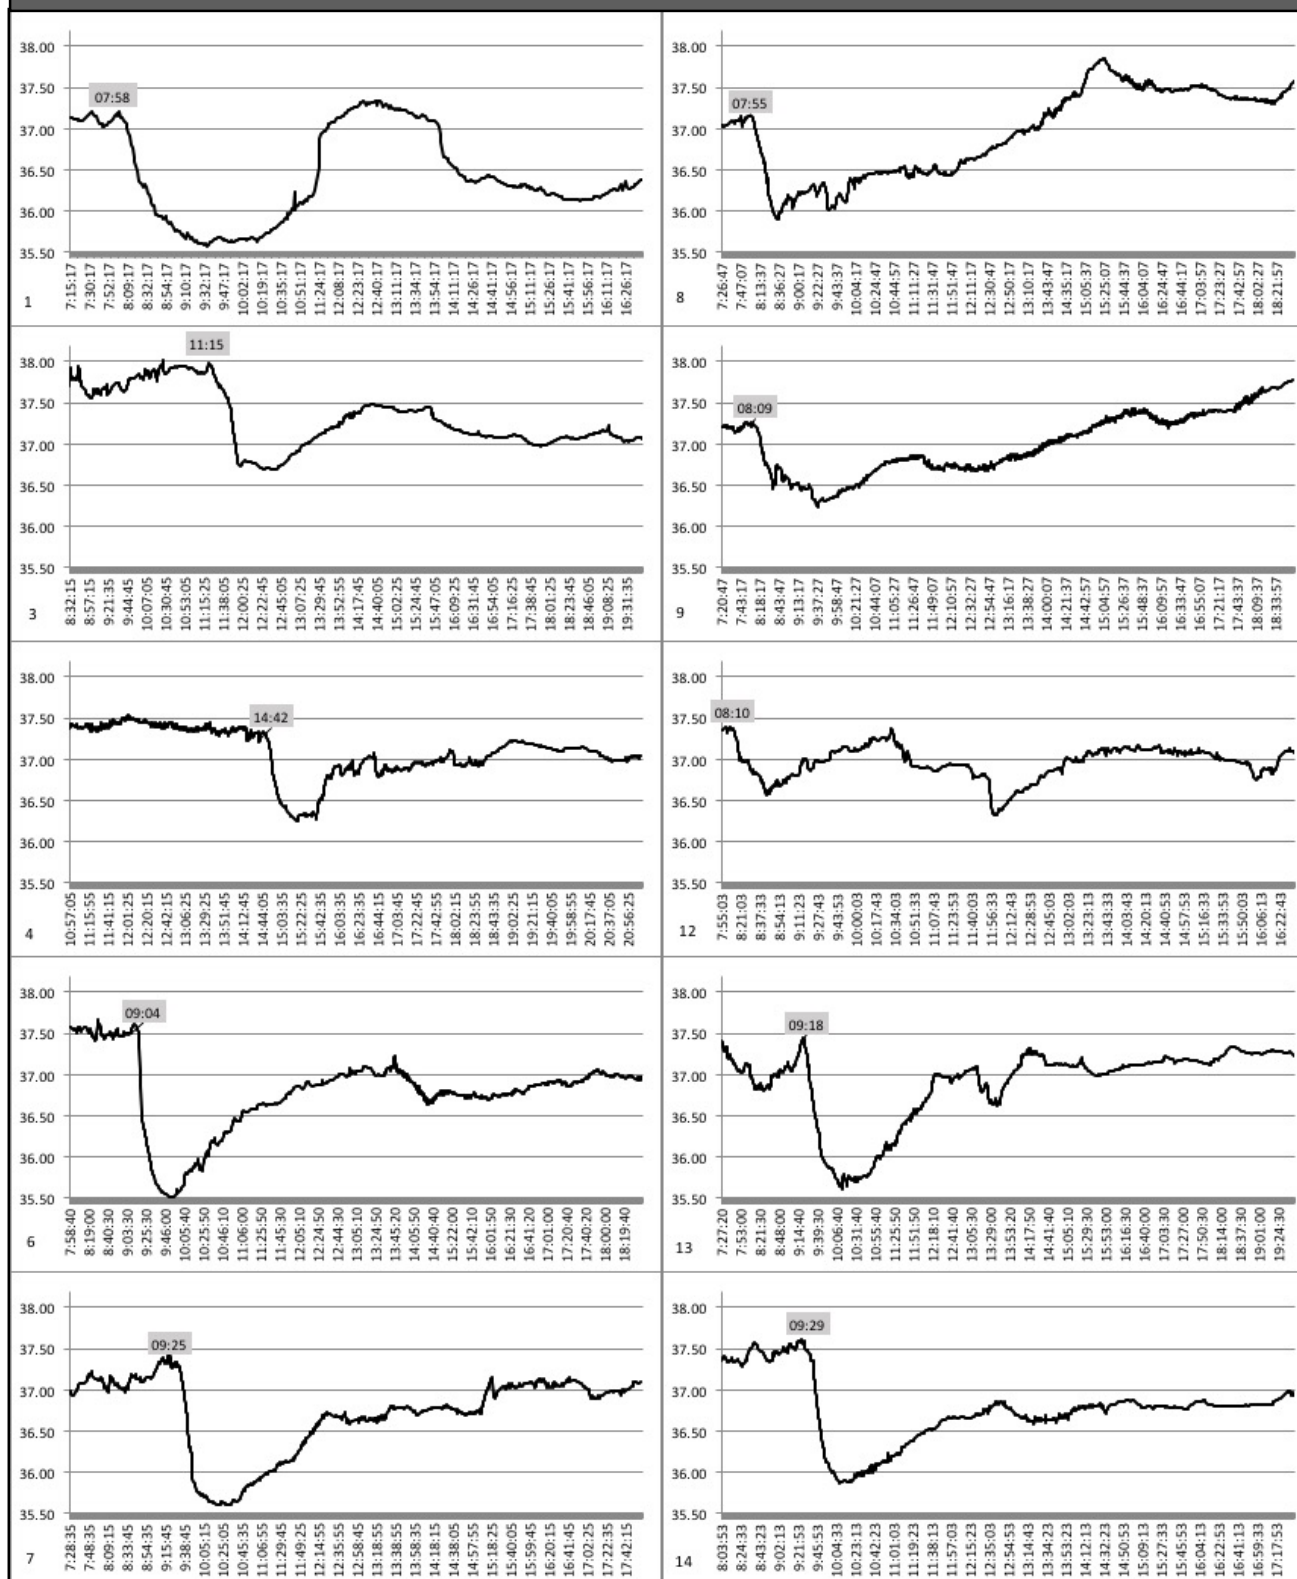

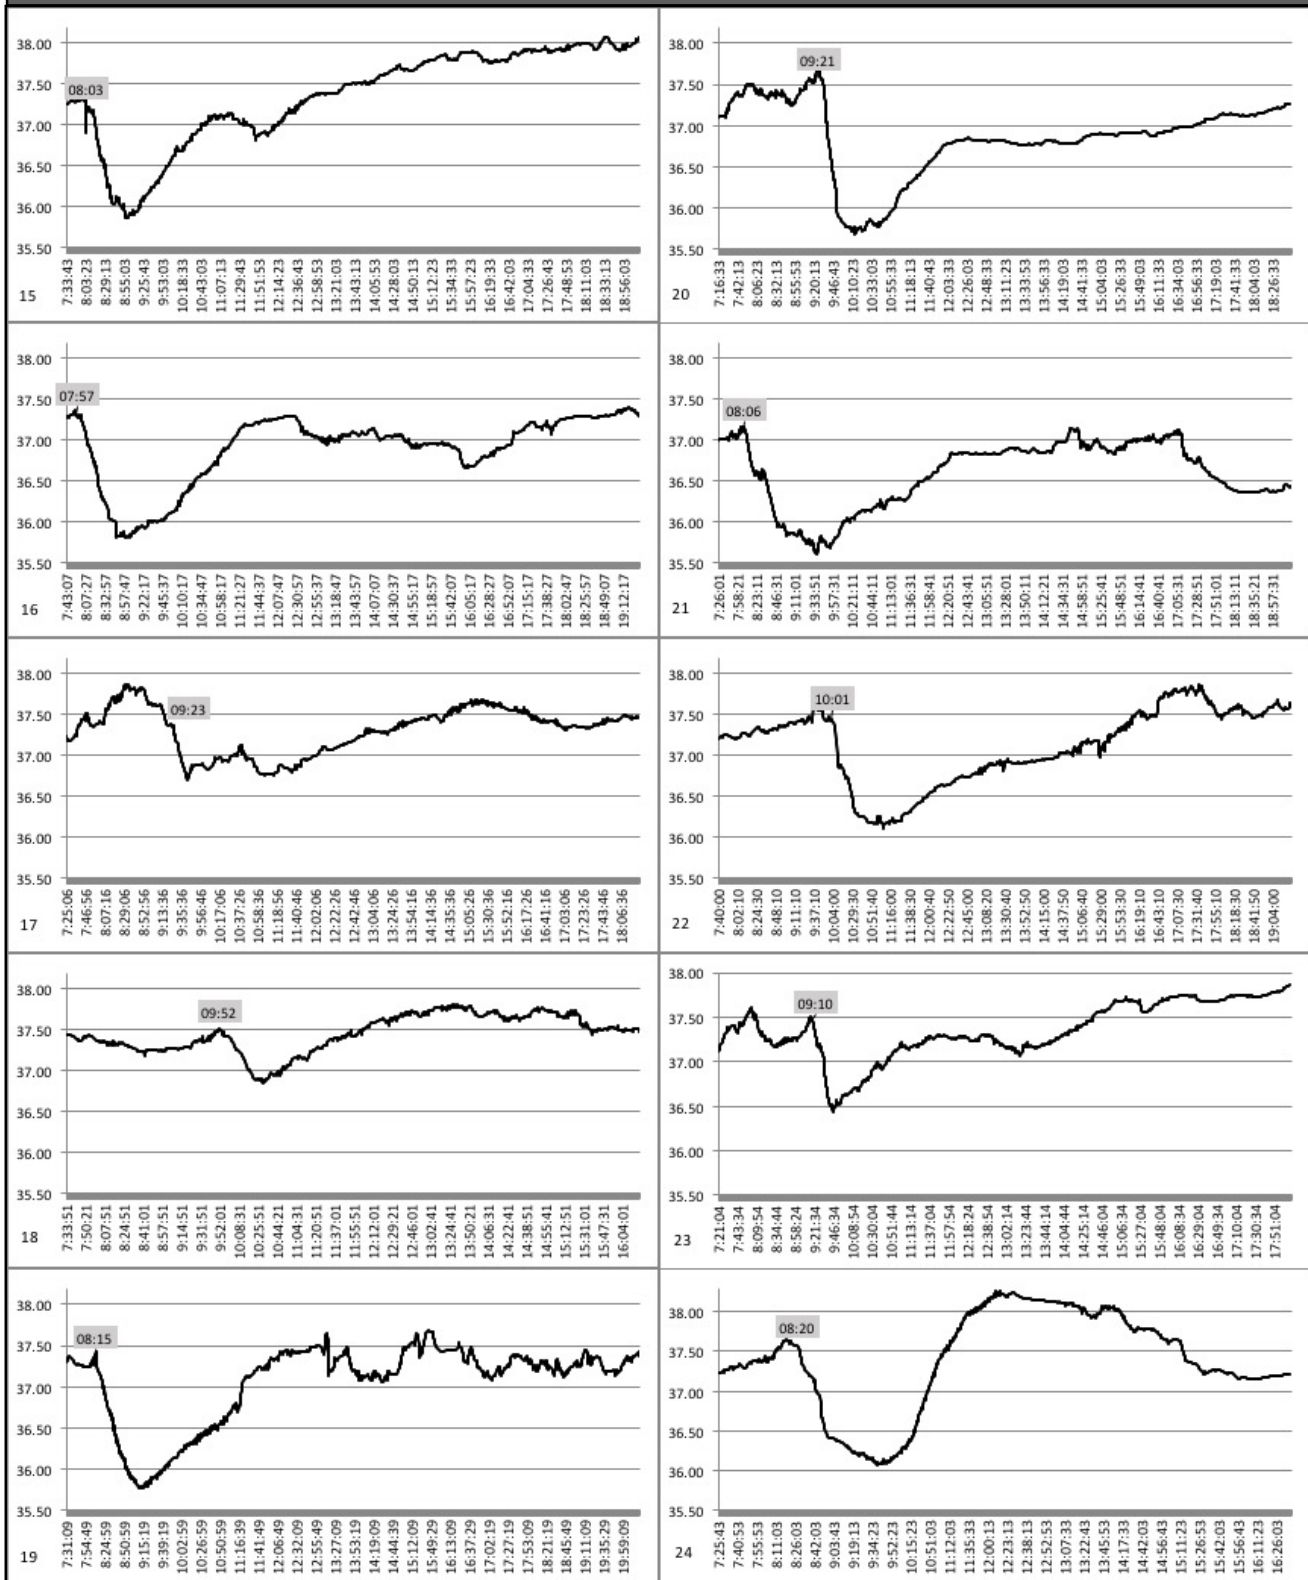

Figures S4(a-c): Post processing CorTemp data plots of participants. The figures report the individual participant temperature data.

Figure S4(a): Post-processing CorTemp data plots of participants 1-14.

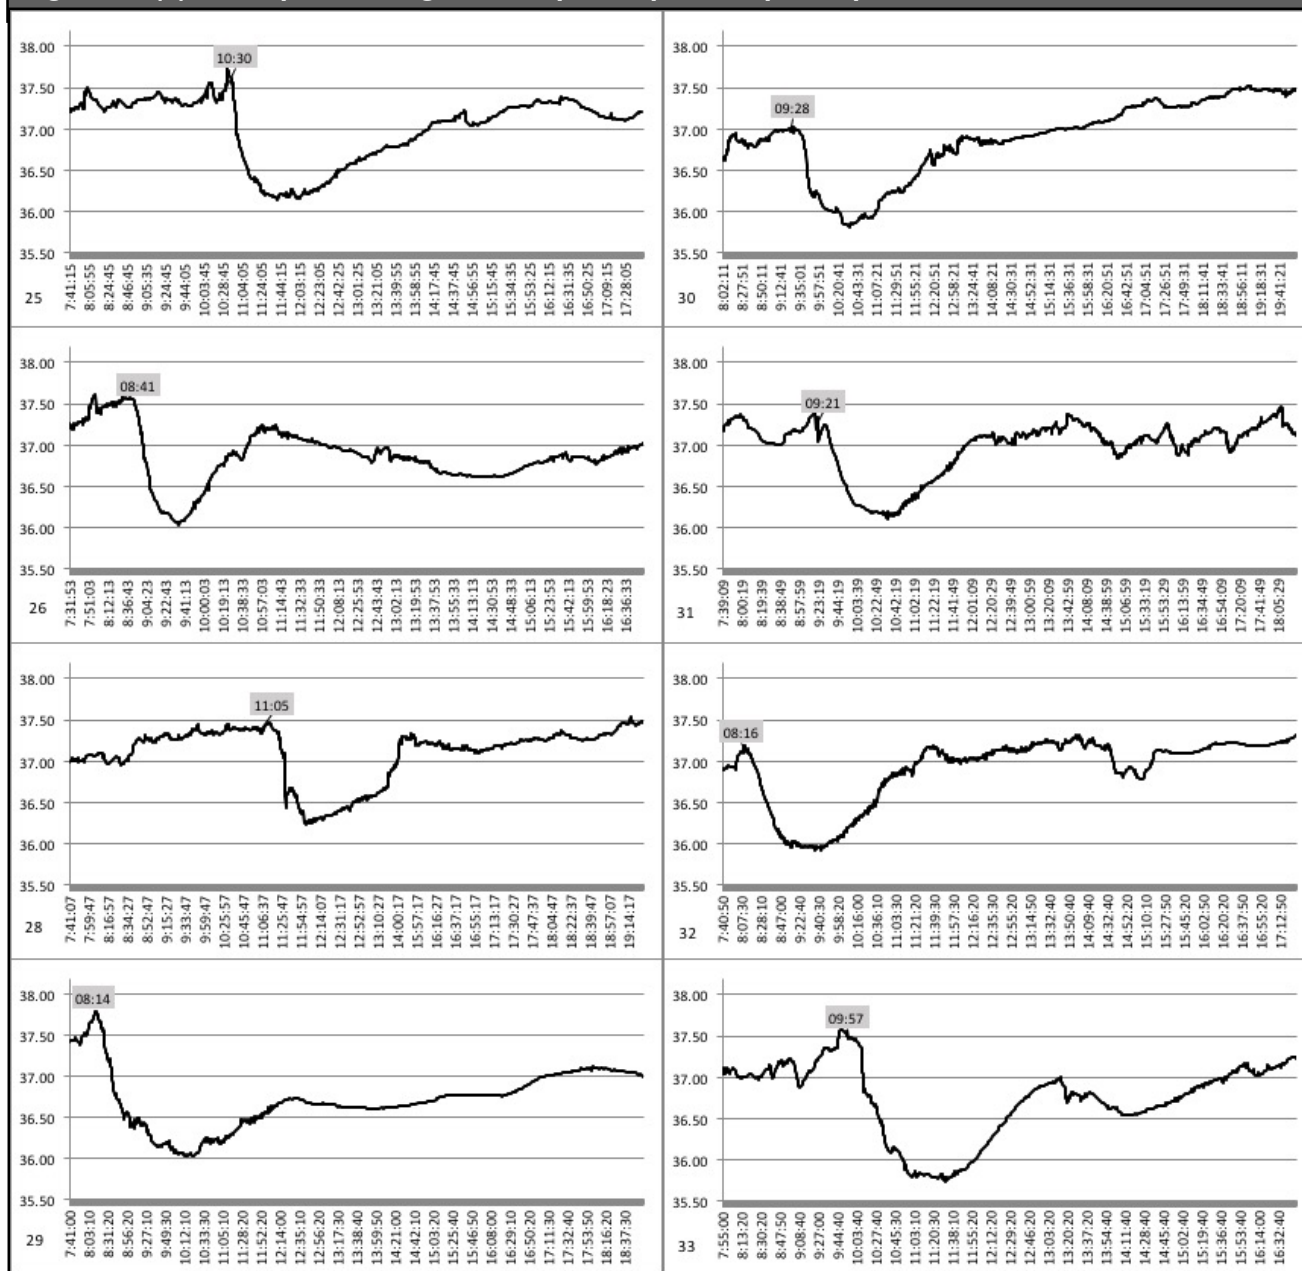

Temperature (°C) is plotted against actual time (hh:mm:ss). The grey data label on each plot reports the time of spinal anesthetic injection.

Figure S4(b): Post-processing CorTemp data plots of participants 15-24.

Temperature (°C) is plotted against actual time (hh:mm:ss). The grey data label on each plot reports the time of spinal anesthetic injection.

Figure S4(c): Post-processing CorTemp data plots of participants 25-33.

Temperature (°C) is plotted against actual time (hh:mm:ss). The grey data label on each plot reports the time of spinal anesthetic injection.
