

Supplemental Digital Figure 1

Photograph Showing the Posterior View of the Right Inguinal Region in a Dissection Model, Used During an Anatomy Training For Medical Students, Erasmus Medical Center, Rotterdam, 2011

Important structures including the epigastric vessels, the spermatic cord and the genitofemoral nerve are separated from the surrounding tissue and colored, so that it looks like a three-dimensional anatomy atlas. The left side of the figure is caudal, the right side is cranial.

1. Epigastric vessels
2. Spermatic Cord
3. Femoral branch of the genitofemoral nerve
