Phase of Clinical Encounter Physical ▾			
Level of Competency <input type="radio"/> Requires close supervision (details) <input type="radio"/> Requires minimal supervision (details) <input checked="" type="radio"/> Ready for independence; supervision for refinement (detail)			
Continue (strengths) <div></div>			
Change (or do less) <div></div>			
Consider (next steps) <div></div>			

- Does not recognize normal variants
- Does not detect abnormalities
- C/or incorrect examination maneuvers
- Causes harm, unnecessary pain

- Examines appropriate systems at appropriate ages including growth parameters
- Correct physical exam maneuvers
- Recognizes abnormalities but unsure of significance
- Communicates with parent and baby/child

- Physical exam is organized, appropriate with correct maneuvers.
- Opportunistic examination (i.e. exams chest before hips).
- Use of caregiver to minimize distress to child
- Recognizes findings and their relevance (normal variants vs pathological) and adapts exam as needed.
- Gentle confident handling of infant
- Responsive communication with parent and baby/child
