

Supplementary Figure 3. The effect of human chymotrypsin B2 (CTRB2) on human pancreatic lipase (PNLIP) variants. Digestion experiments were carried out as detailed in *Methods*. The figure demonstrates representative gels from two experiments for all PNLIP variants where no significant degradation by CTRB2 was observed. The CTRB2-sensitive PNLIP variants are shown in Figure 5. The asterisks indicate the two chains of human CTRB2 autolyzed at the Tyr164-Asn165 peptide bond.
