

Supplemental Digital Content 2; Supplemental Figure 2.

Supplemental Figure 2. Observed *versus* predicted remifentanyl concentrations for the penultimate population model (2A) and the “post-hoc” individual models (2B). Blue dots indicate concentrations for subjects with a BMI of 35 or less. Red dots indicate subjects with a BMI above 35. The lines of identity are shown in blue; locally weighted scatterplot smoothing (LOWESS) lines are in red.
