

Supplementary Figure 2

Figure S2: Scattergram displays: A) concentration dependent effects of morphine on the migration of mouse embryonic fibroblasts (MEF's) and B) the absence of an effect of naloxone on the effects of morphine. Each dot represents a single migration well. One-way ANOVA across concentrations with a with a post hoc comparison using Dunnett's multiple comparison test. Treatments linked by a common line did not differ: * $p < 0.05$.
