Grade	Definition
Grade I	Any deviation from the normal postoperative course without the need for
	pharmacological treatment or surgical, endoscopic, and radiological interventions
	Allowed therapeutic regimens are: drugs as antiemetics, antipyretics, analgetics,
	diuretics, electrolytes, and physiotherapy. This grade also includes wound
	infections opened at the bedside
Grade II	Requiring pharmacological treatment with drugs other than such allowed for grade I
	complications
	Blood transfusions and total parenteral nutrition are also included
Grade III	Requiring surgical, endoscopic, or radiological intervention
Grade IIIa	Intervention not under general anesthesia
Grade IIIb	Intervention under general anesthesia
Grade IV	Life-threatening complication (including CNS complications)* requiring IC/ICU
	management
Grade IVa	Single organ dysfunction (including dialysis)
Grade IVb	Multiorgan dysfunction
Grade V	Death of a patient
Suffix "d"	If the patient suffers from a complication at the time of discharge, the suffix "d" (for
	"disability") is added to the respective grade of complication. This label indicates
	the need for a follow-up to fully evaluate the complication.
*Brain hemorrhag	ge, ischemic stroke, subarachnoidal bleeding, but excluding transient ischemic attacks.
CNS, central nervous system; IC, intermediate care; ICU, intensive care unit.
