Model 6 / Sibling-comparison	<b>2.79</b>	<b>5.71 – 11.29</b>	<b>2.56</b>	<b>7.99 – 2.87</b>	0.12	<b>-4.98 – 5.23</b>	Ref	4.15	-0.34 – 8.65	<b>-6.57</b>	<b>-12.67 - -0.46</b>
Model 7 / Post-birth interval	<b>-55.51</b>	<b>-68.72 -- 42.30</b>	<b>-8.44</b>	<b>-16.98 -- 0.10</b>	-8.94	<b>-17.06 -- -0.83</b>	Ref	-4.96	-11.59 – 1.68	<b>-9.01</b>	<b>-16.15 -- -1.86</b>

Models were adjusted for the following measured covariates: *Model 1*: offspring sex, year of birth; *Model 2*: Model 1 + maternal and paternal age, highest education, nationality, different fathers; *Model 3*: Model 2 + maternal and paternal criminality, attempted suicide, substance misuse, and severe mental illness; *Model 4*: Model 3 + first-born preterm birth, low birth weight, and small for gestational age; *Model 5 / Cousin-comparison*: offspring sex, year of birth, maternal and paternal age, highest education, nationality, different fathers, maternal and paternal criminality, attempted suicide, substance misuse, and severe mental illness, first-born preterm birth, low birth weight, and small for gestational age; *Model 6 / Sibling-comparison*: offspring sex, year of birth, maternal and paternal age, parity, different father; *Model 7 / Post-birth interval*: offspring sex, year of birth, maternal and paternal age, highest education, nationality, different fathers, maternal and paternal criminality, attempted suicide, substance misuse, and severe mental illness, first-born preterm birth, low birth weight, and small for gestational age. Bold font indicates statistical significance with 99% confidence interval.

**Appendix 2. Fully Adjusted Odds Ratios Predicting Adverse Birth Outcomes Across Interpregnancy Interval and Model Stratified by Year of Birth**
