

**Supplemental Figure 1. This details the pressures obtained during a right heart catheterization of both the heterotopic and native hearts of the patient prior to surgery. All pressures are presented as systolic/diastolic (mean) and are in mmHg units; PA = pulmonary artery pressure; PCWP = pulmonary capillary wedge pressure; RA = right atrial pressure; RV = right ventricular pressure; RVEDP = right ventricular end-diastolic pressure. CO = cardiac output (L/min); CI = cardiac index (L/min/m<sup>2</sup>).**
