

Comparative Performance of Pulmonary Ultrasound, Chest X-ray, and CT Amongst Patients with Acute Respiratory Failure

Supplemental Table 1. Sensitivity analysis of agreement when pulmonary ultrasound B1 classification is mapped to “normal” instead of “interstitial” lung classification on CT.

Variable	B1 = Interstitial	B1 = Normal
Lobe-Specific Agreement by Location		
Overall	86.6%	80.0%
Right lung overall	86.6%	81.1%
Right upper lobe	83.6%	77.6%
Right middle lobe	86.6%	82.1%
Right lower lobe	89.6%	83.6%
Left lung overall	86.6%	78.4%
Left upper lobe	91.0%	80.6%
Left lower lobe	82.1%	76.1%

B1 classification = 1-3 discrete B-lines present in an interspace on pulmonary ultrasound
