

Supplement Figure 1. Sepsis induced apoptosis, downregulated PLK1 expression and activated NF-κB pathway in intestinal epithelium. (A) Representative

immunohistochemistry (IHC) results of the indicated proteins. (B) IHC scores of the indicated proteins in the two groups. Original magnification $\times 200$ and 400 as indicated. $*P < 0.05$ vs. adjacent normal intestinal tissues. PLK1: polo-like kinase 1; NF- κ B: nuclear factor- κ B.
