

Figure 1 Speech intelligibility (% words correct) with the PP, P3, and P3SP for the individual listeners (N = 21), as a function of Sensation Level (mean SL at 0.5, 1, 2, 3 kHz), for Condition 1 (left panel) and Condition 2 (right panel). Linear regression lines are depicted for visualization purposes when the correlation was significant ($p < 0.05$; Spearman correlation coefficient, ρ , is also reported next to the regression line).
