

eAppendix1

Forest plots with results of individual studies for each risk factor considered.

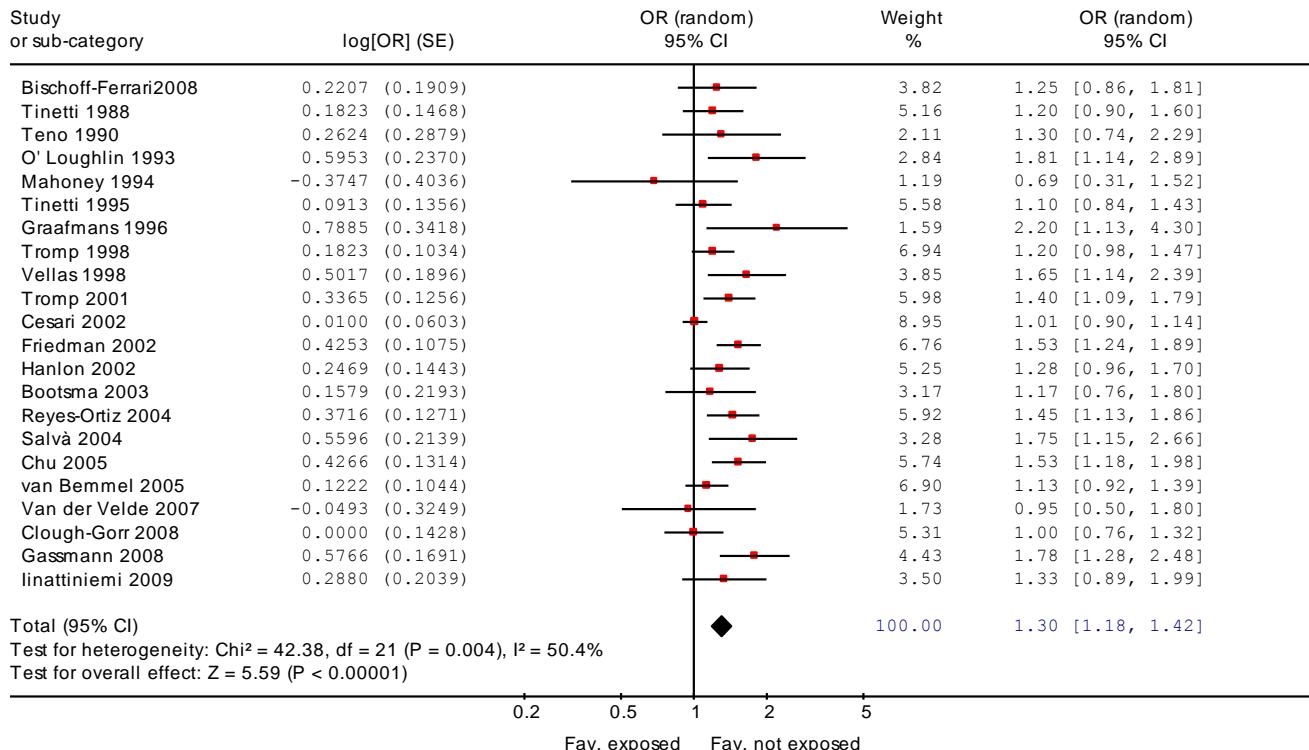

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 01 Age (for 5 years increase)
 Outcome: 01 Any faller

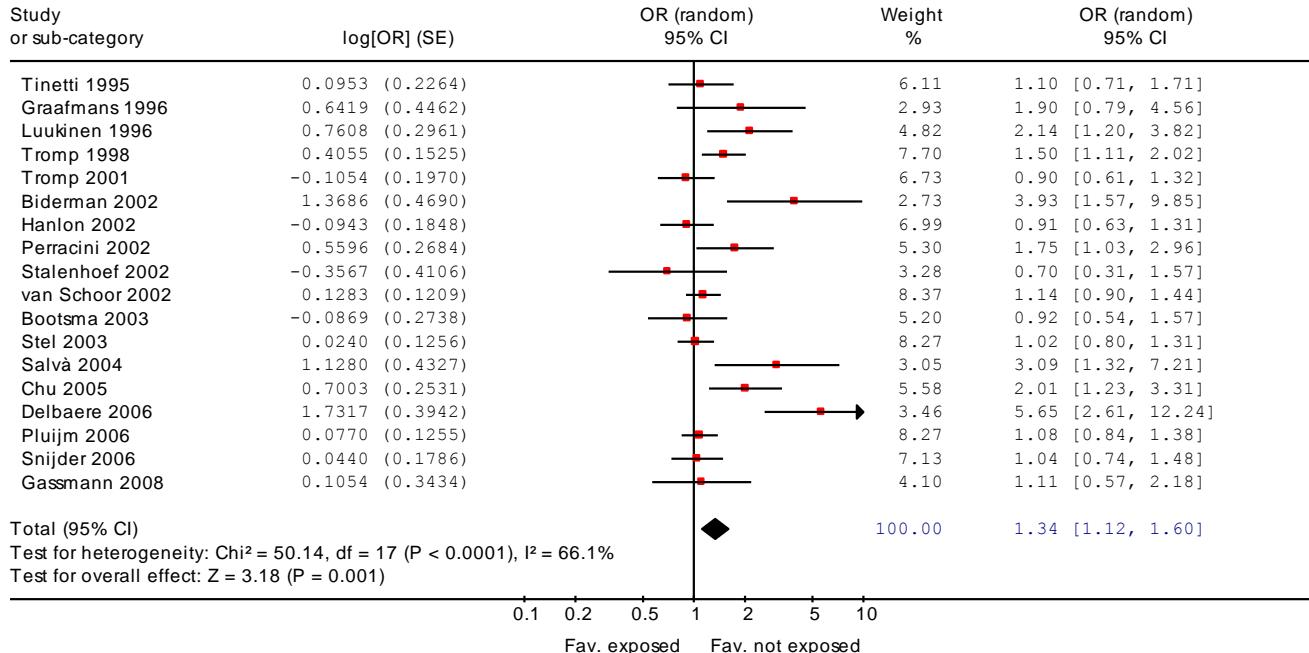

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 01 Age (for 5 years increase)
 Outcome: 02 Recurrent fallers

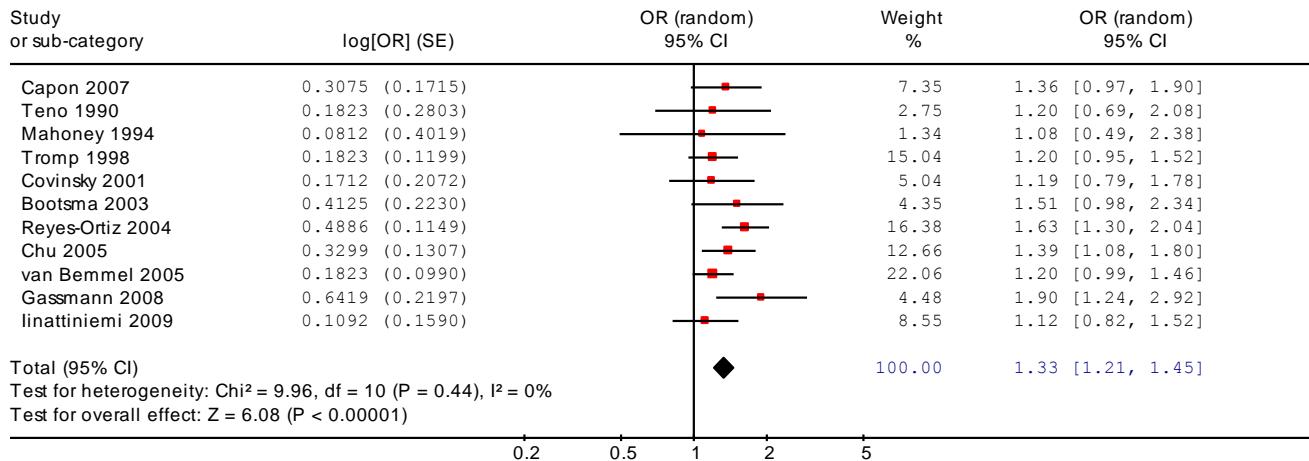

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 02 Female gender vs male
 Outcome: 01 Any faller

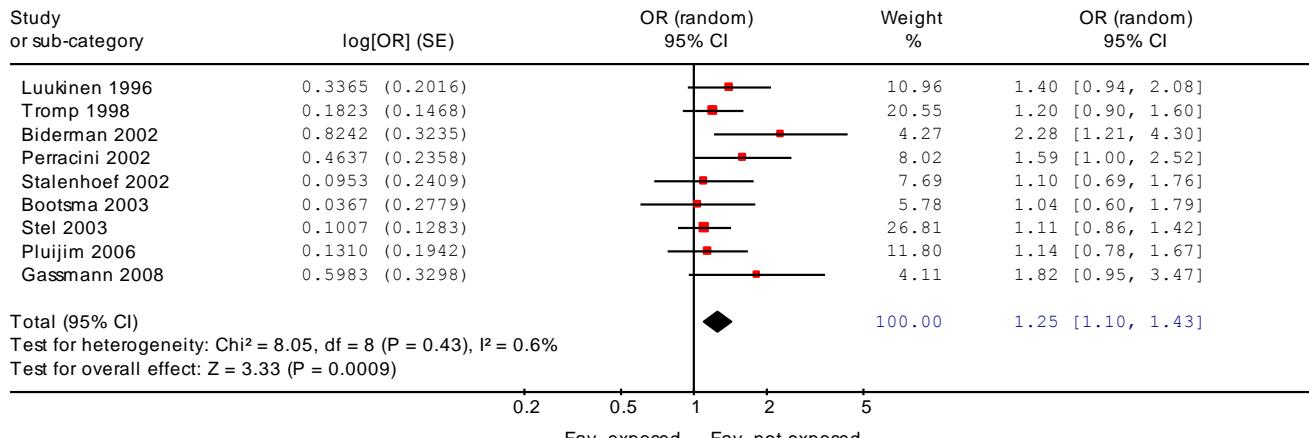

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 02 Female gender vs male
 Outcome: 02 Recurrent fallers

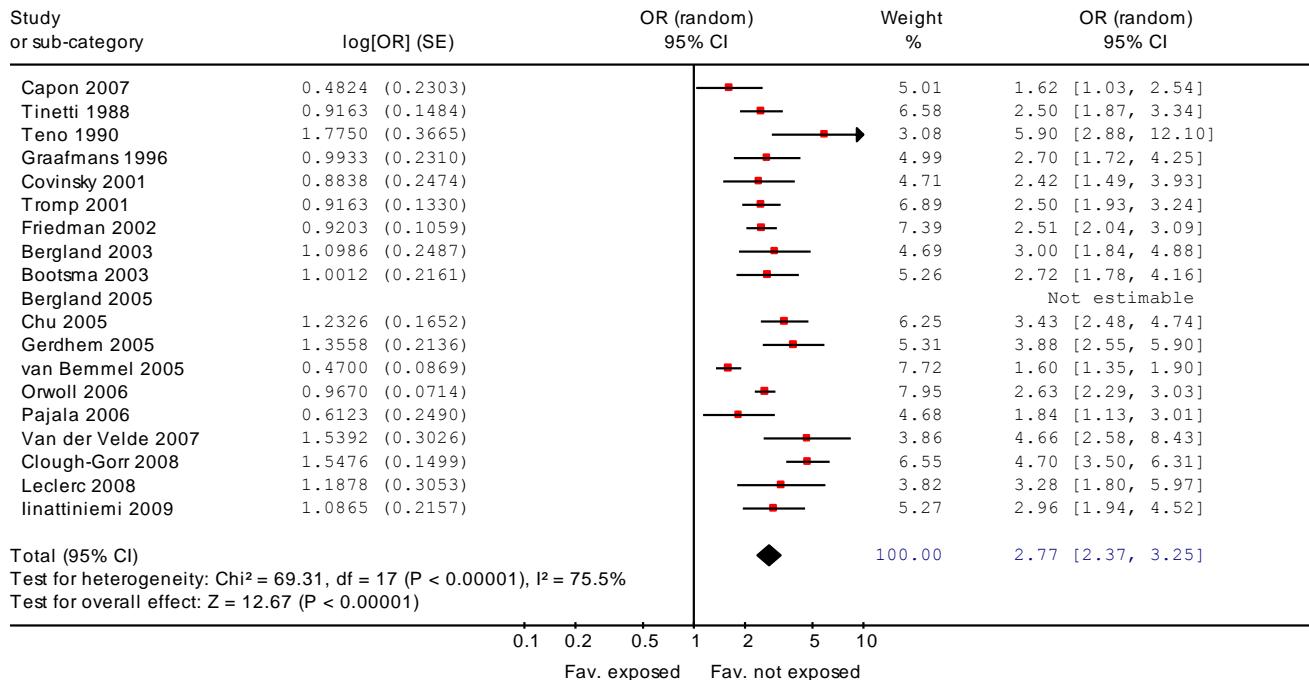

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 03 Living alone vs not alone
 Outcome: 01 Any faller

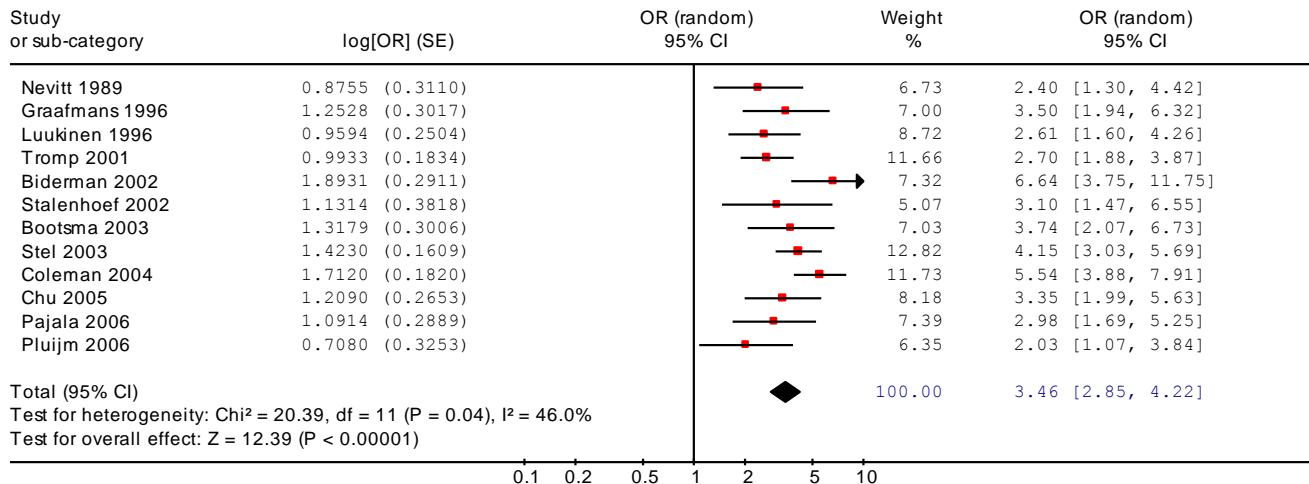

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 03 Living alone vs not alone
 Outcome: 02 Recurrent fallers

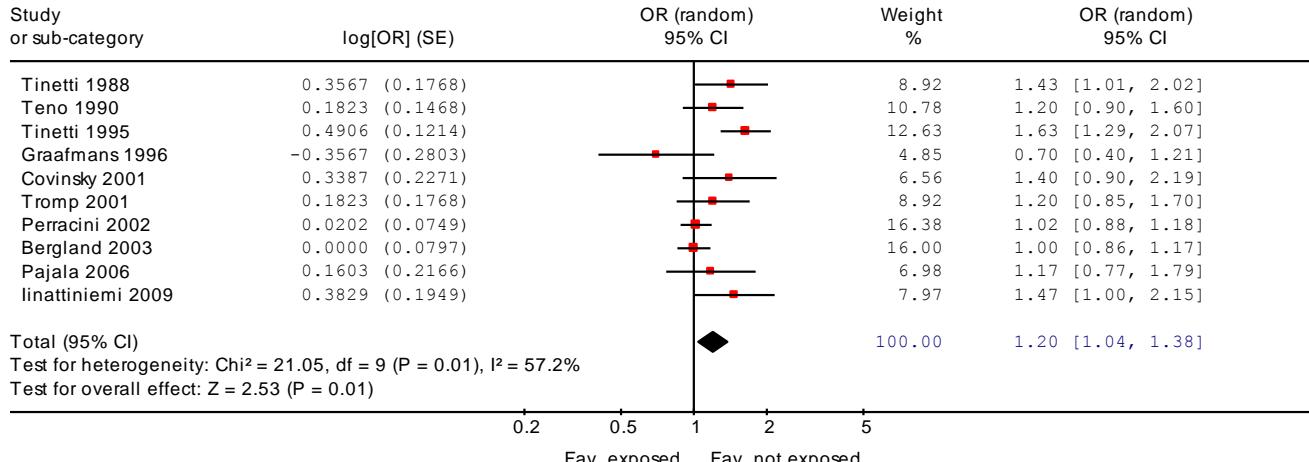

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 04 History of falls vs no history
 Outcome: 01 Any faller

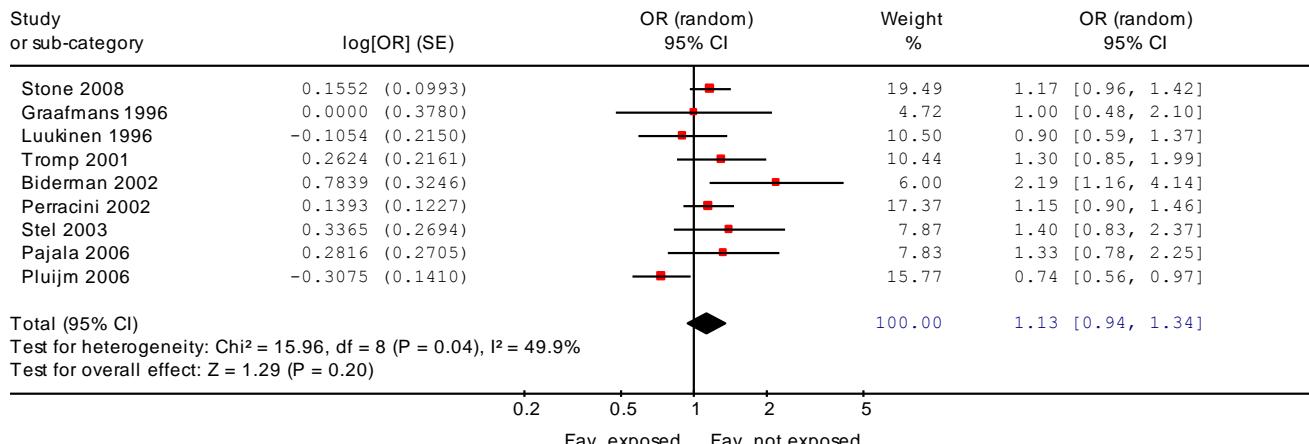

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 04 History of falls vs no history
 Outcome: 02 Recurrent fallers

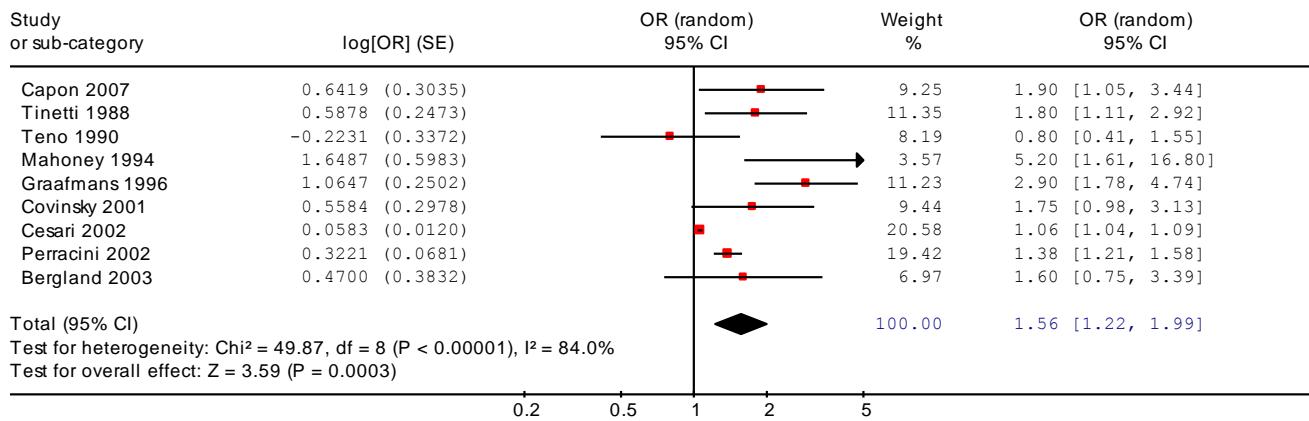

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 05 Limitation of physical activity vs no limitation
 Outcome: 01 Any faller

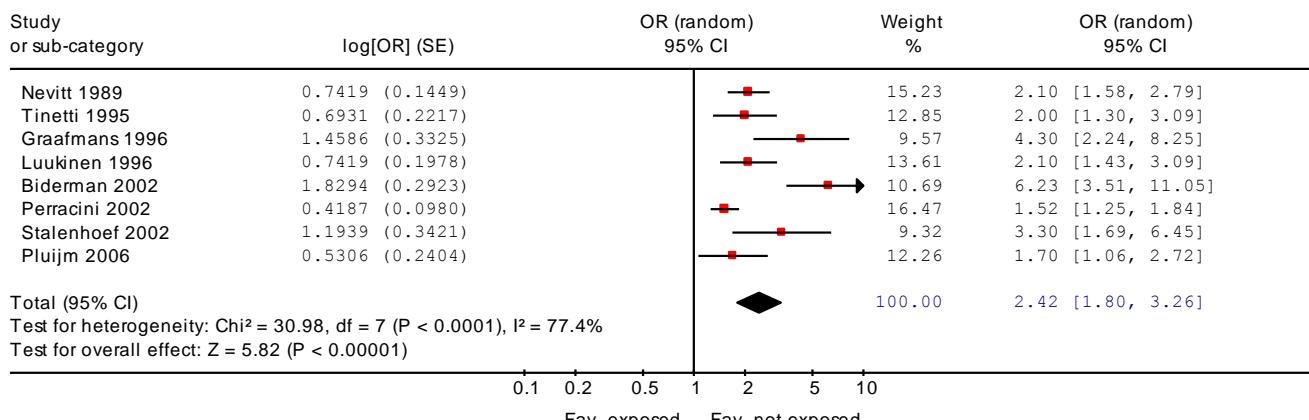

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 05 Limitation of physical activity vs no limitation
 Outcome: 02 Recurrent fallers

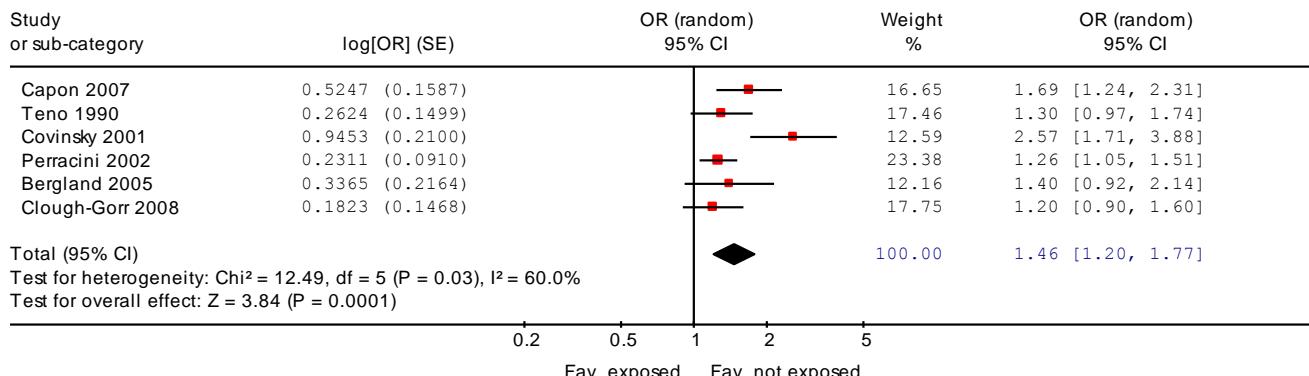

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 06 Physical disability vs no disability
 Outcome: 01 Any faller

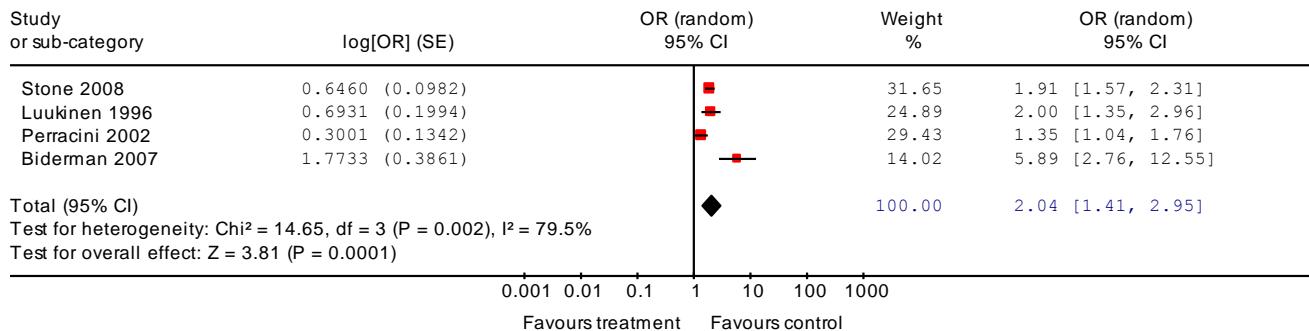

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 06 Physical disability vs no disability
 Outcome: 02 Recurrent fallers

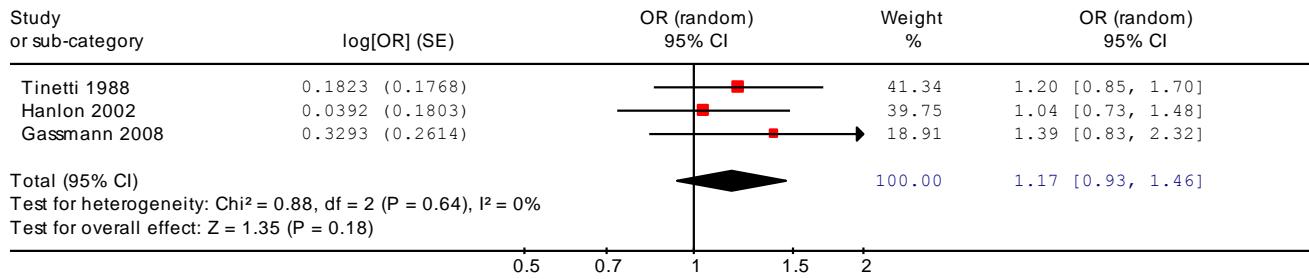

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 07 Instrumental disability vs no disability
 Outcome: 01 Any faller

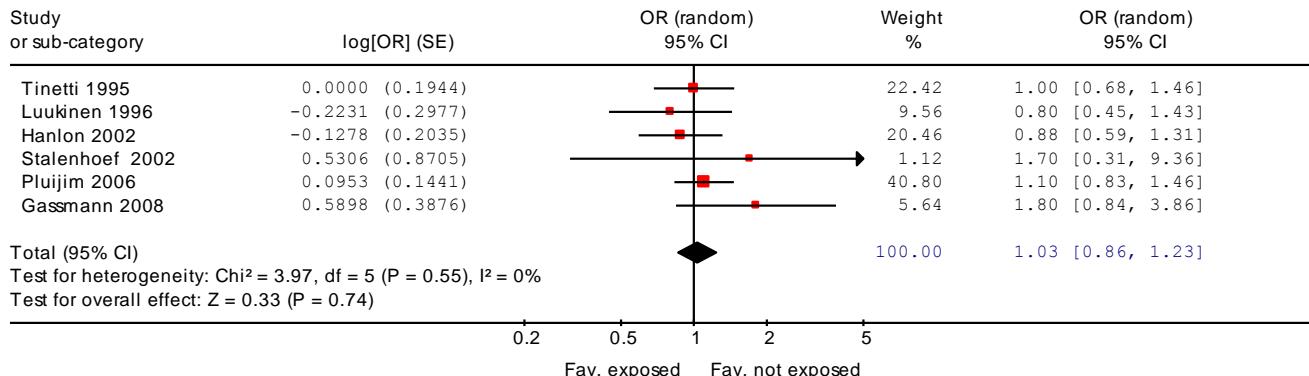

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 07 Instrumental disability vs no disability
 Outcome: 02 Recurrent fallers

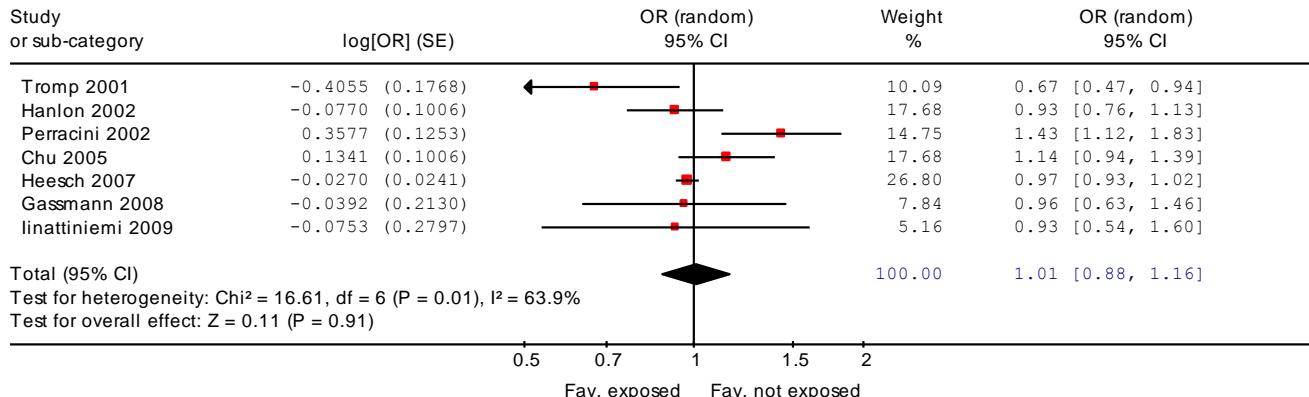

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 08 Low body mass index vs intermediate/high
 Outcome: 01 Any faller

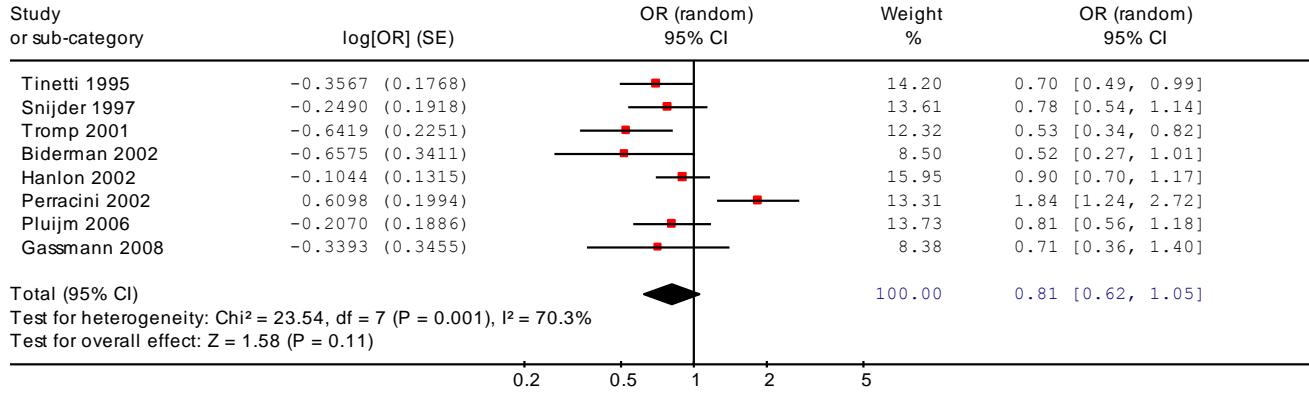

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 08 Low body mass index vs intermediate/high
 Outcome: 02 Recurrent fallers

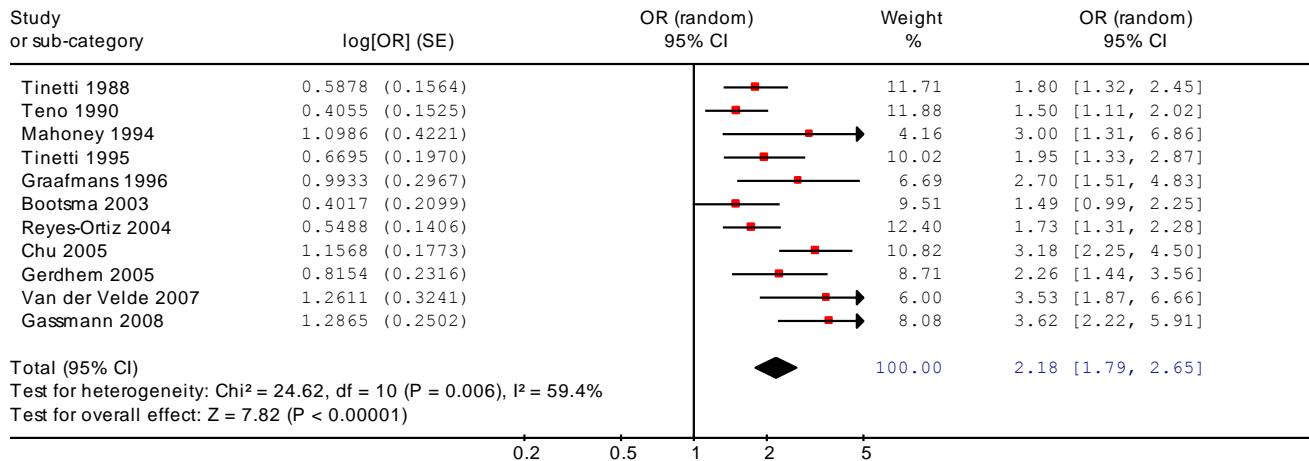

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 09 Low education vs high/intermediate
 Outcome: 01 Any faller

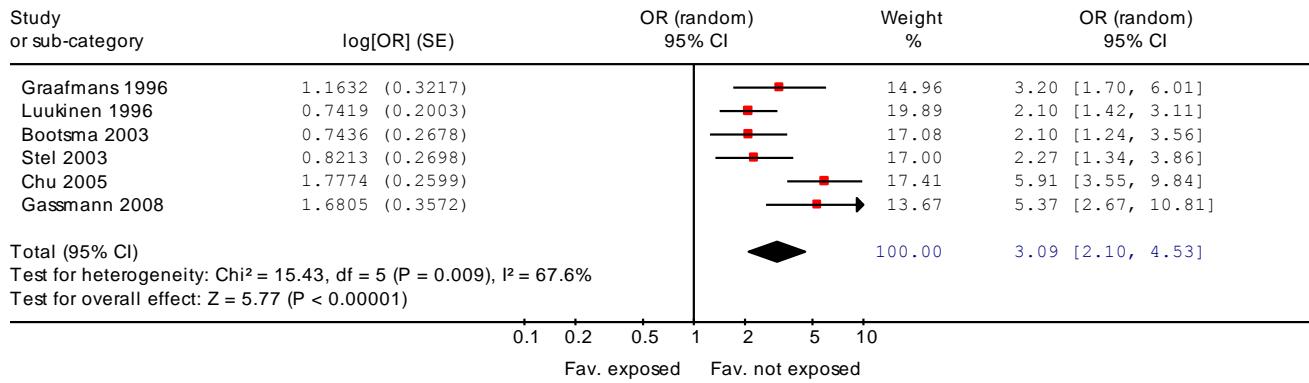

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 09 Low education vs high/intermediate
 Outcome: 02 Recurrent fallers

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 10 Walking aid use vs no use
 Outcome: 01 Any faller

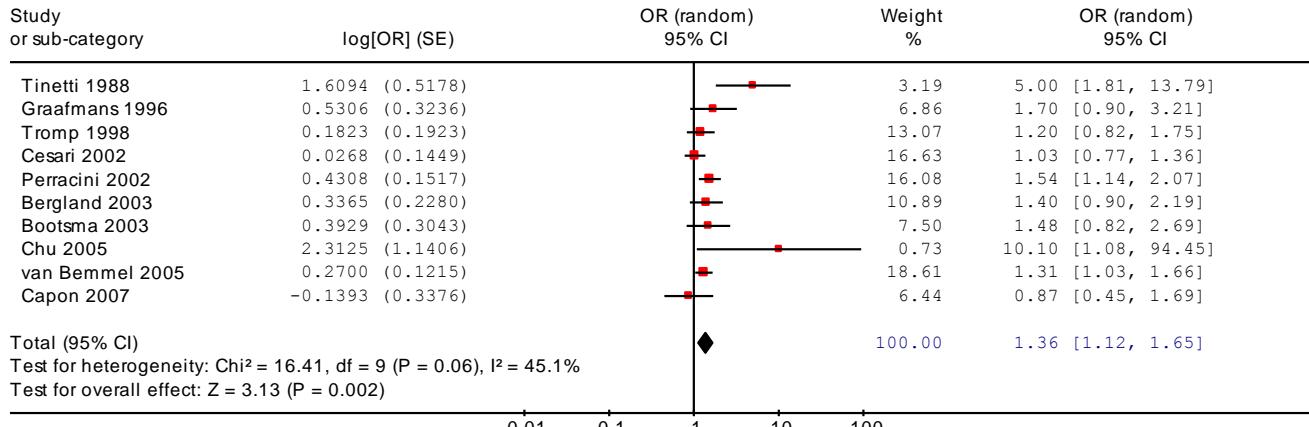

Review: Sociodemographic risk factors for falls in community dwelling older people
 Comparison: 10 Walking aid use vs no use
 Outcome: 02 Recurrent fallers

Review: Medical and psychological risk factors for falls in community dwelling older people

Comparison: 01 Cognition impairment vs no impairment

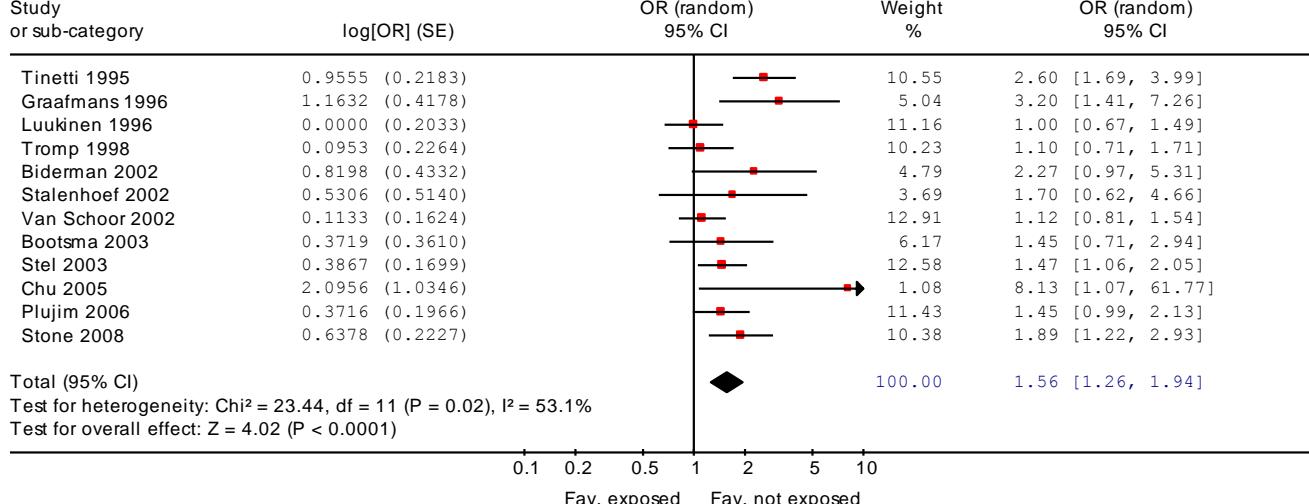

Outcome: 01 Any faller

Review: Medical and psychological risk factors for falls in community dwelling older people

Comparison: 01 Cognition impairment vs no impairment

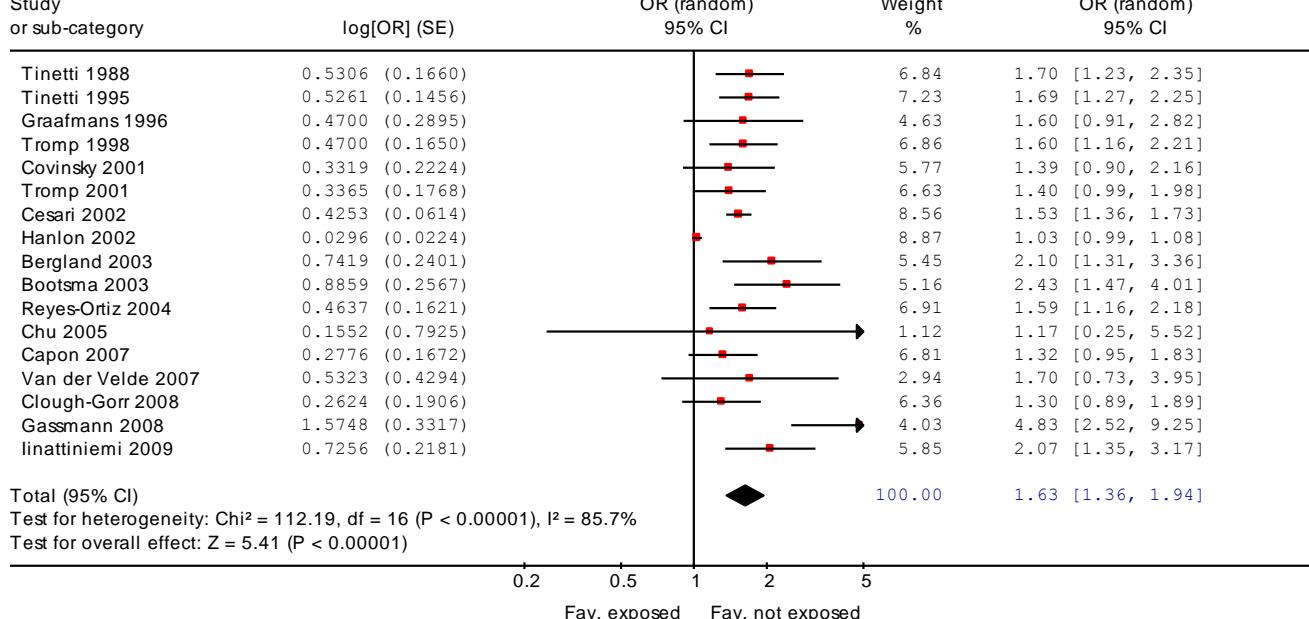

Outcome: 02 Recurrent fallers

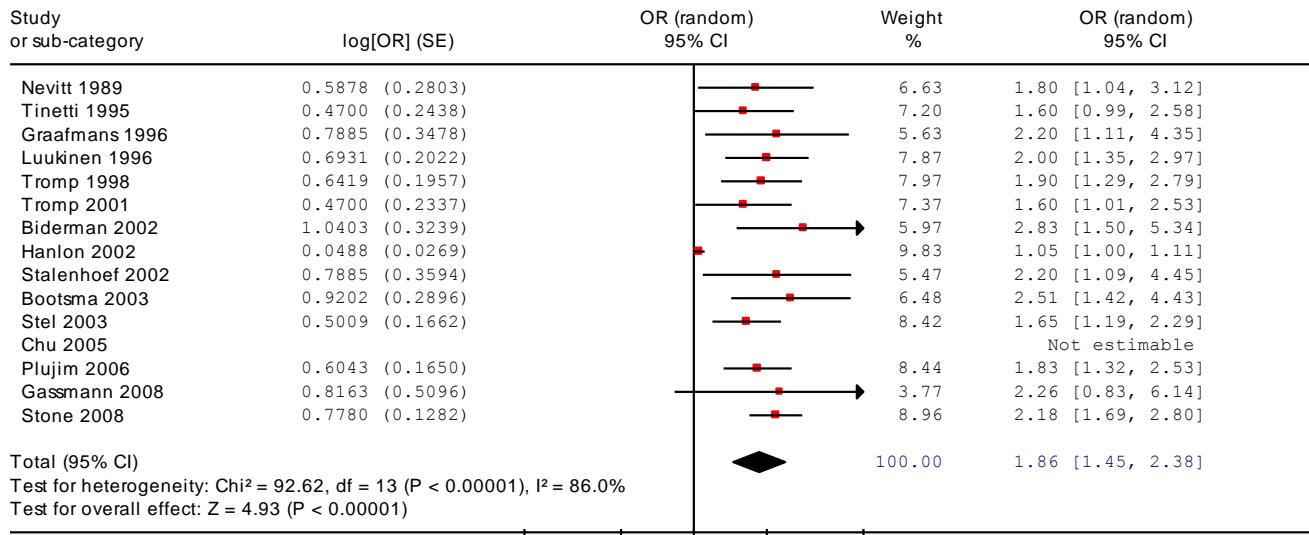

Review: Medical and psychological risk factors for falls in community dwelling older people

Comparison: 02 Depression vs no depression

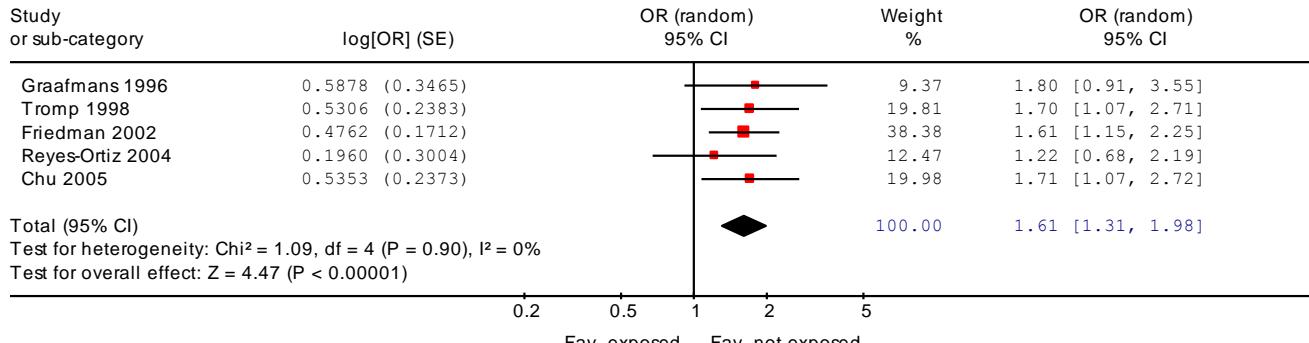

Outcome: 01 Any faller

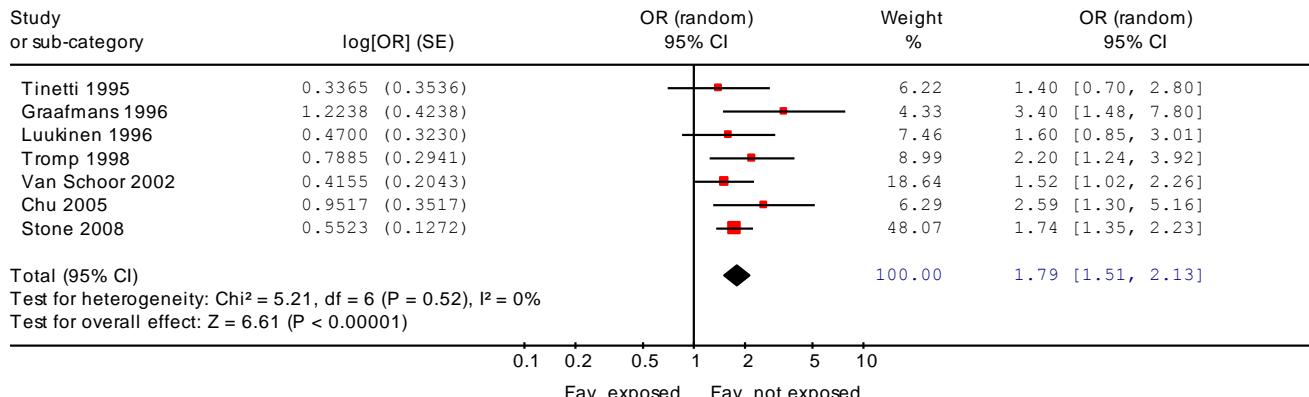

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 02 Depression vs no depression
 Outcome: 02 Recurrent fallers

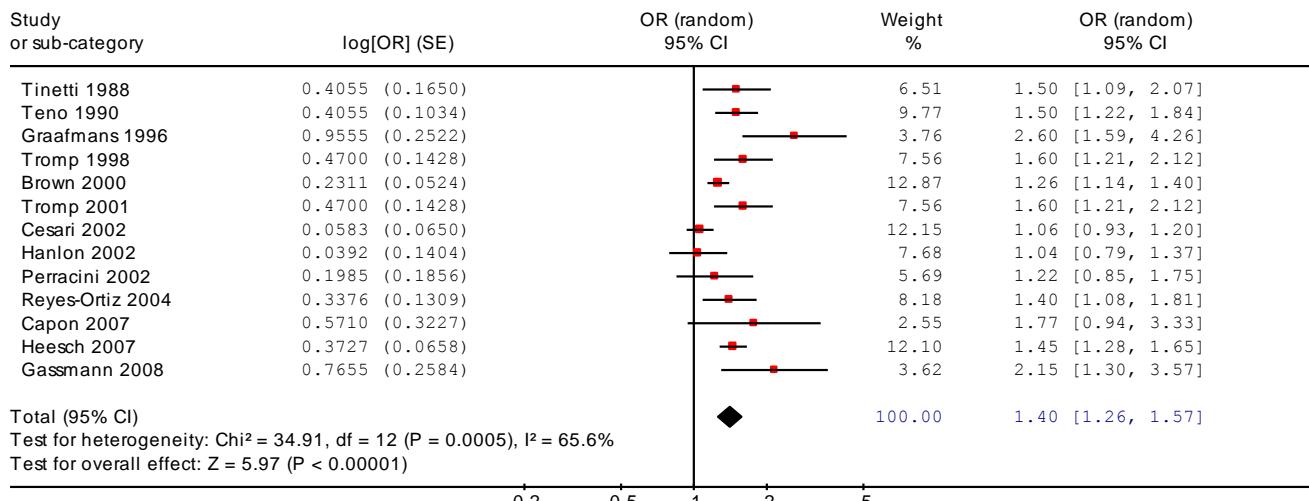

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 03 History of stroke vs no history
 Outcome: 01 Any faller

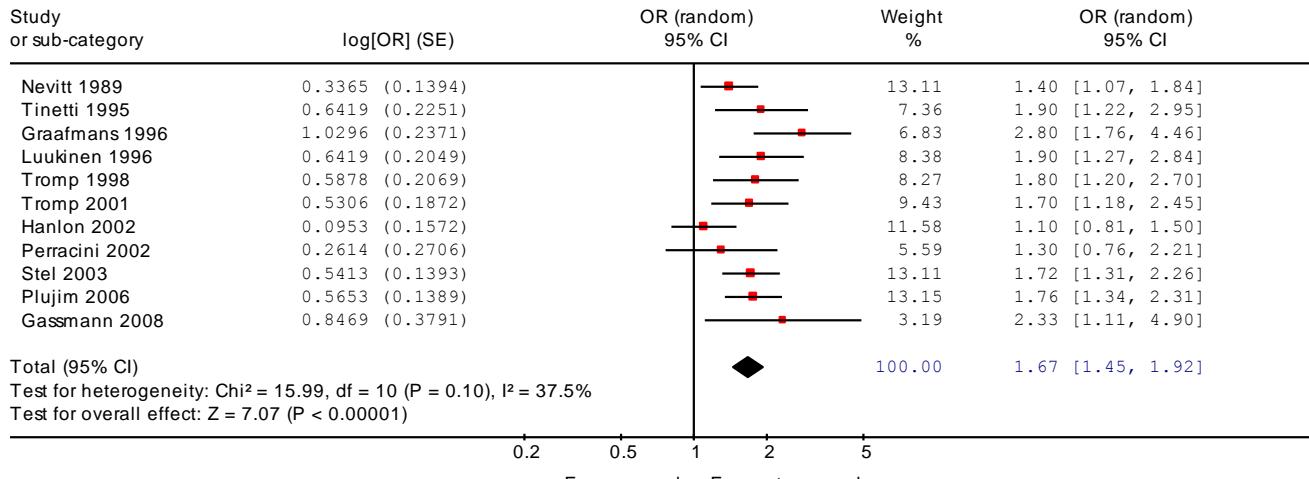

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 03 History of stroke vs no history
 Outcome: 02 Recurrent fallers

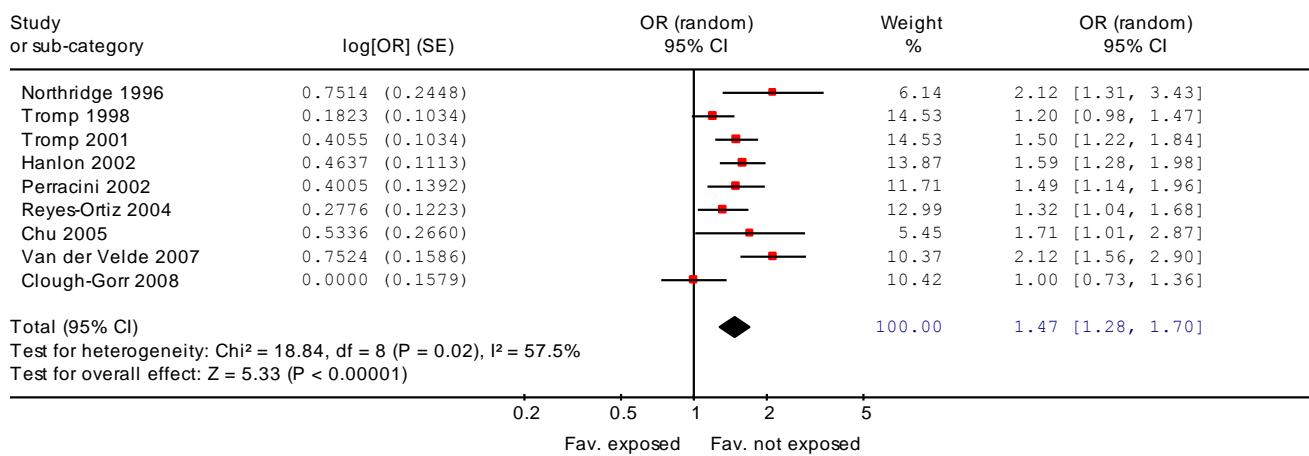

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 04 Urinary incontinence vs no incontinence
 Outcome: 01 Any faller

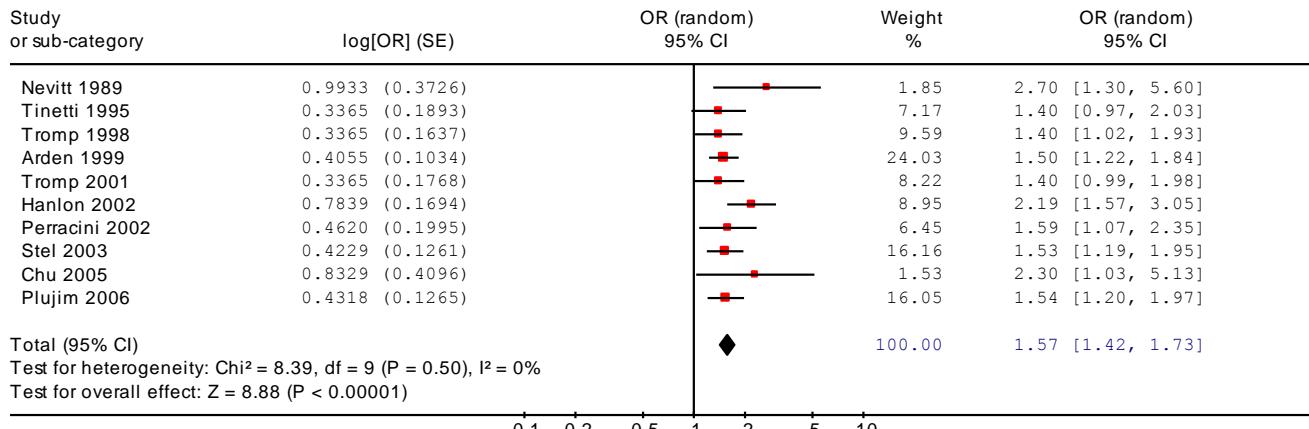

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 04 Urinary incontinence vs no incontinence
 Outcome: 02 Recurrent fallers

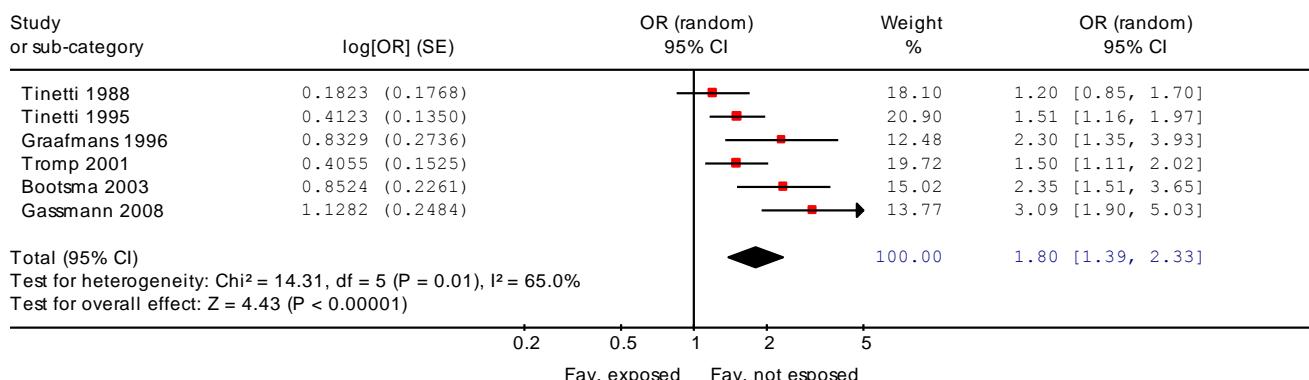

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 05 Rheumatic disease vs no disease
 Outcome: 01 Any faller

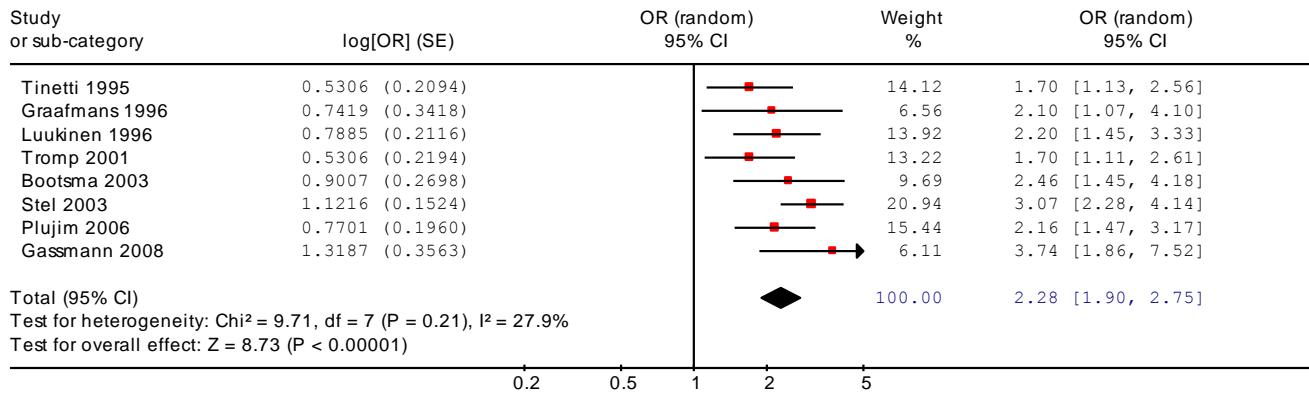

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 05 Rheumatic disease vs no disease
 Outcome: 02 Recurrent fallers

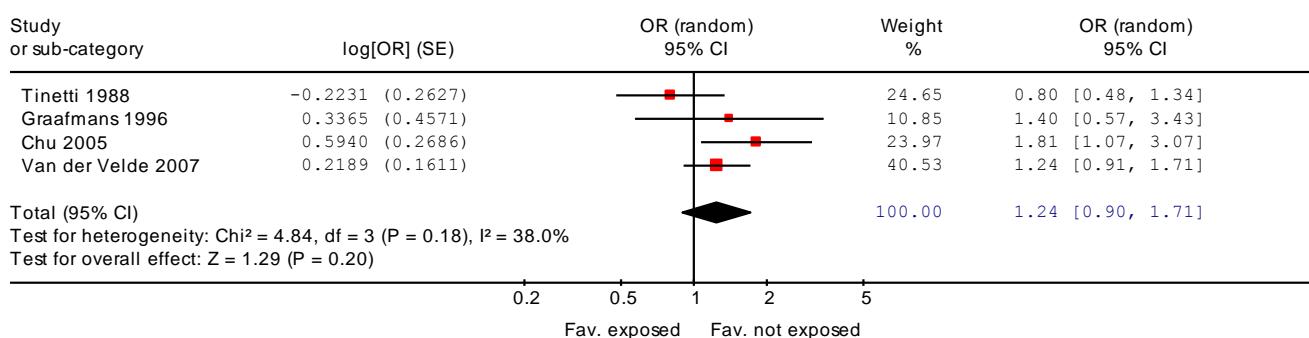

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 06 Dizziness and vertigo vs no dizziness and vertigo
 Outcome: 01 Any faller

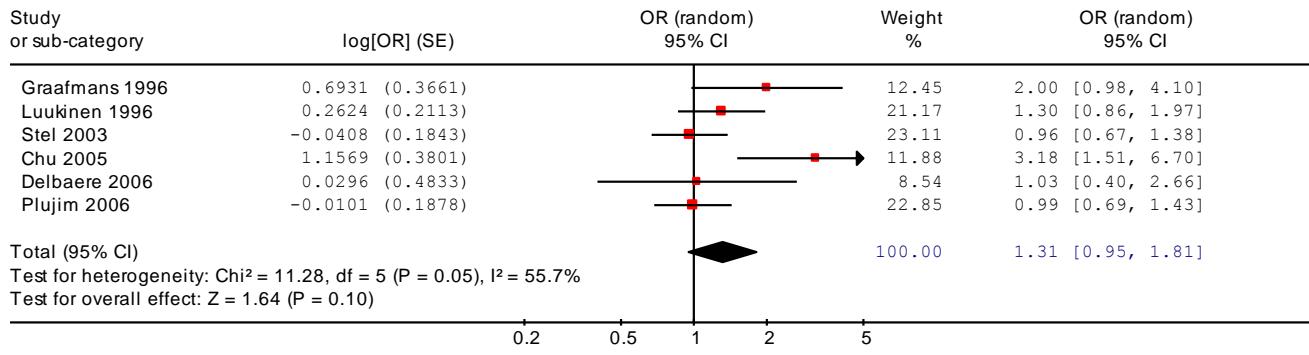

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 06 Dizziness and vertigo vs no dizziness and vertigo
 Outcome: 02 Recurrent fallers

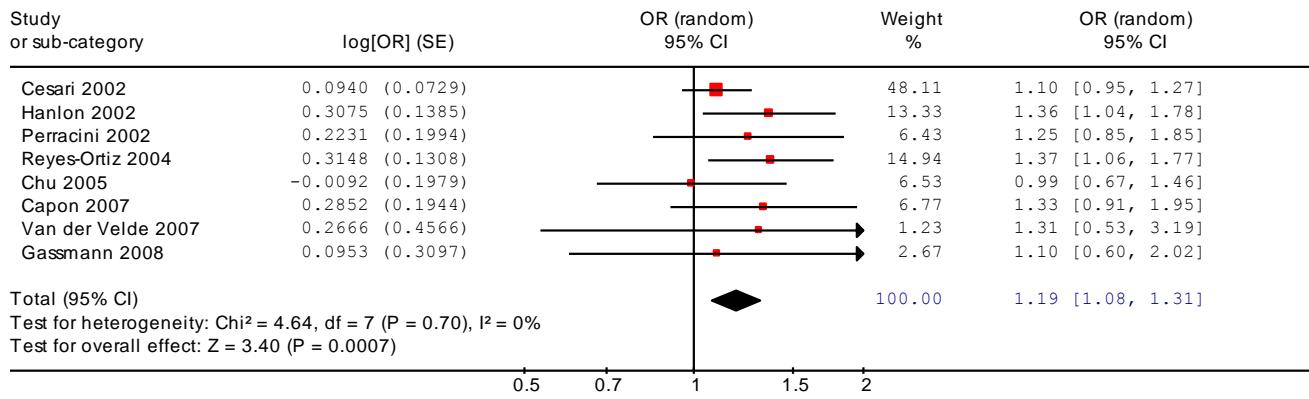

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 07 Hypotension vs no hypotension
 Outcome: 01 Any faller

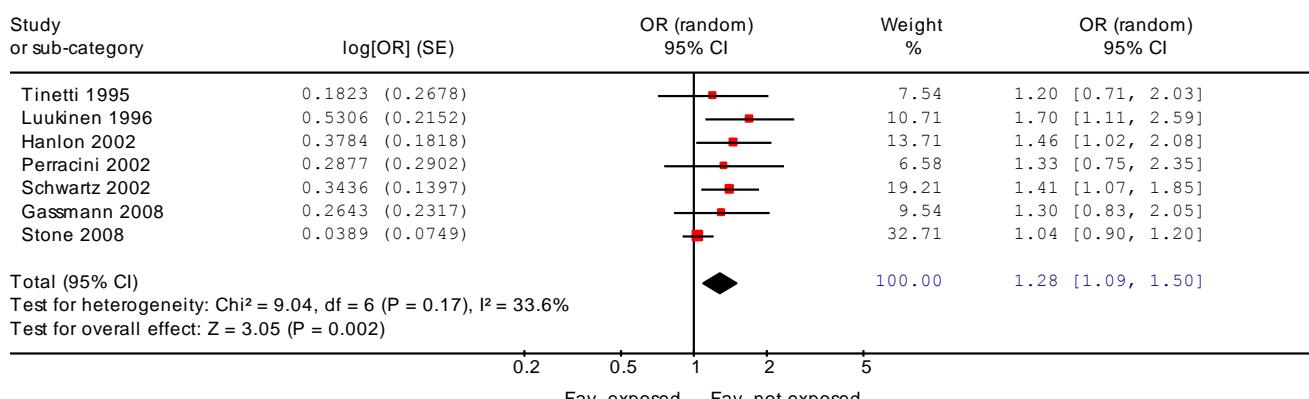

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 07 Hypotension vs no hypotension
 Outcome: 02 Recurrent fallers

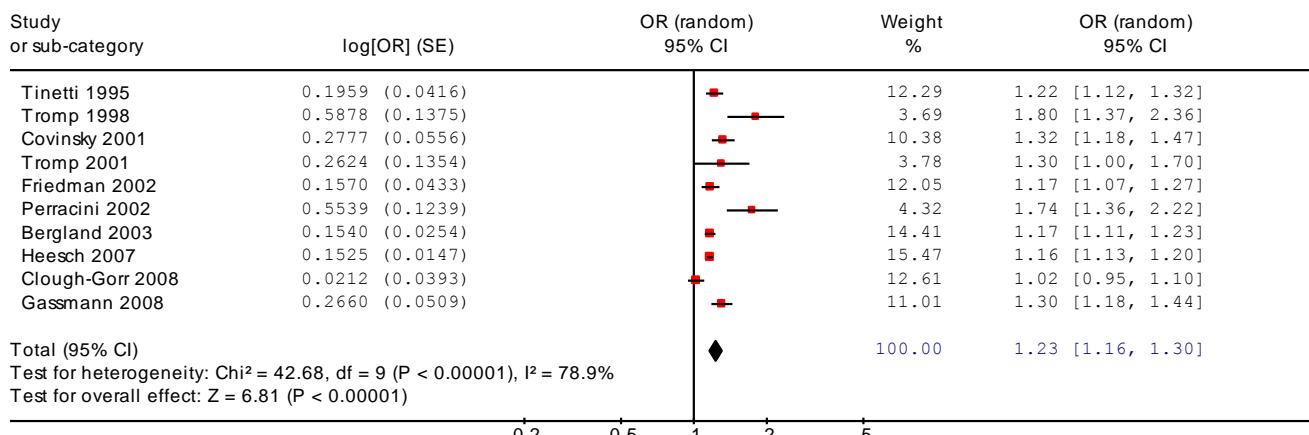

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 08 Diabetes vs no diabetes
 Outcome: 01 Any faller

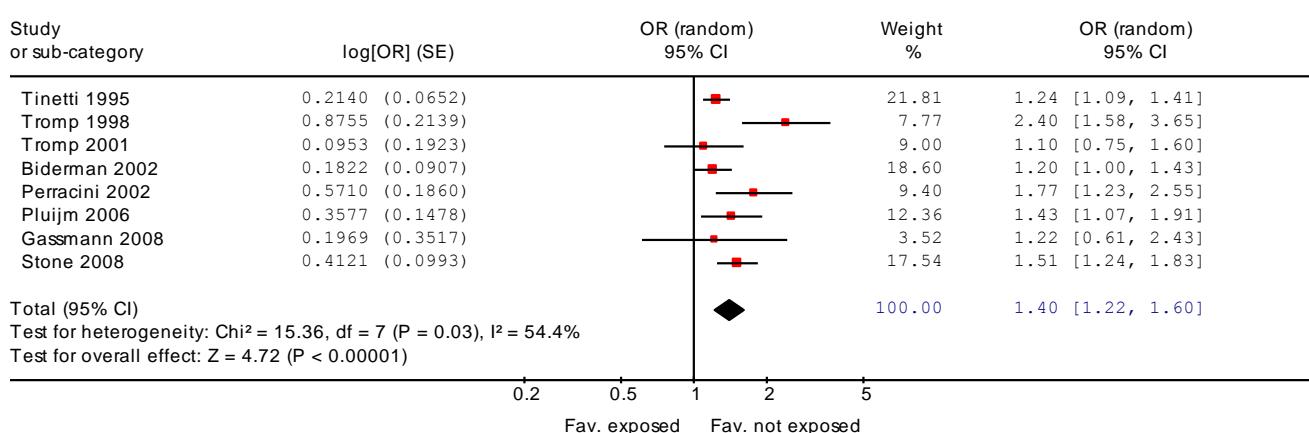

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 08 Diabetes vs no diabetes
 Outcome: 02 Recurrent fallers

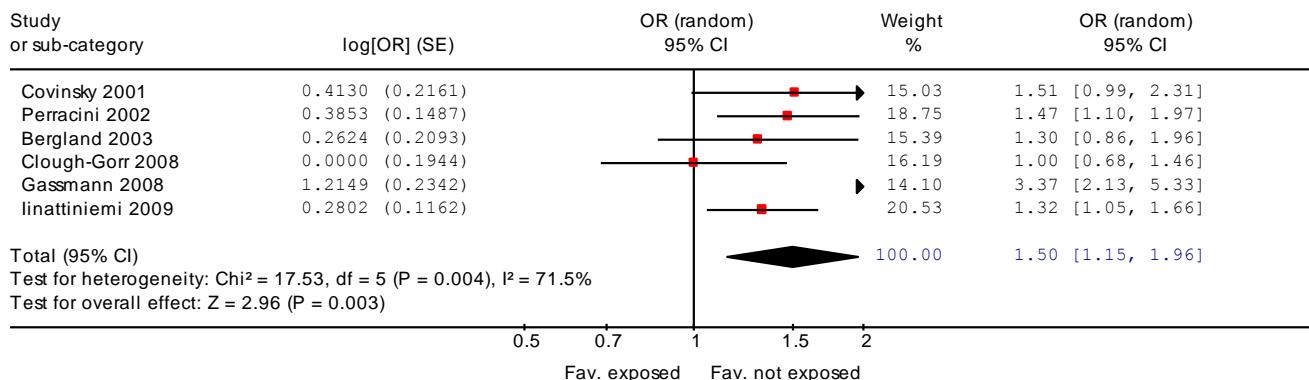

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 09 Comorbidity (increment of 1 condition)
 Outcome: 01 Any faller

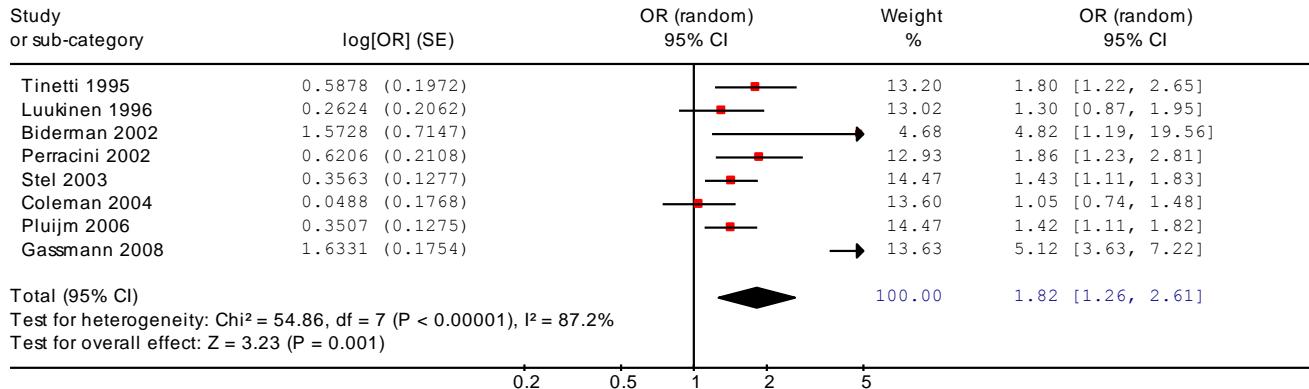

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 09 Comorbidity (increment of 1 condition)
 Outcome: 02 Recurrent fallers

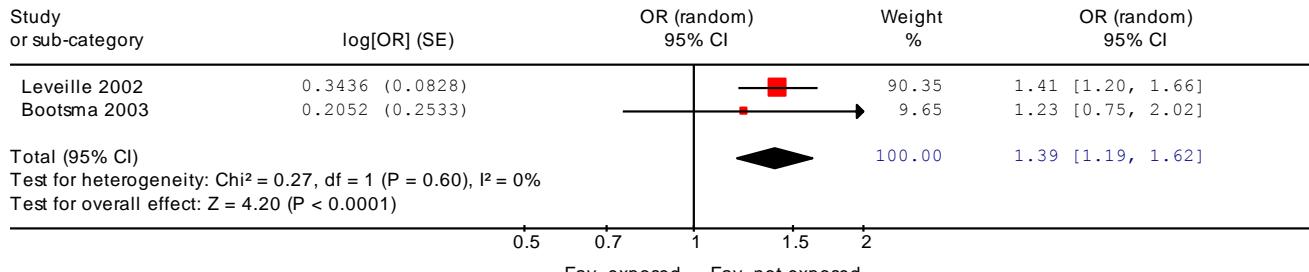

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 10 Poor self perceived health status vs good
 Outcome: 01 Any faller

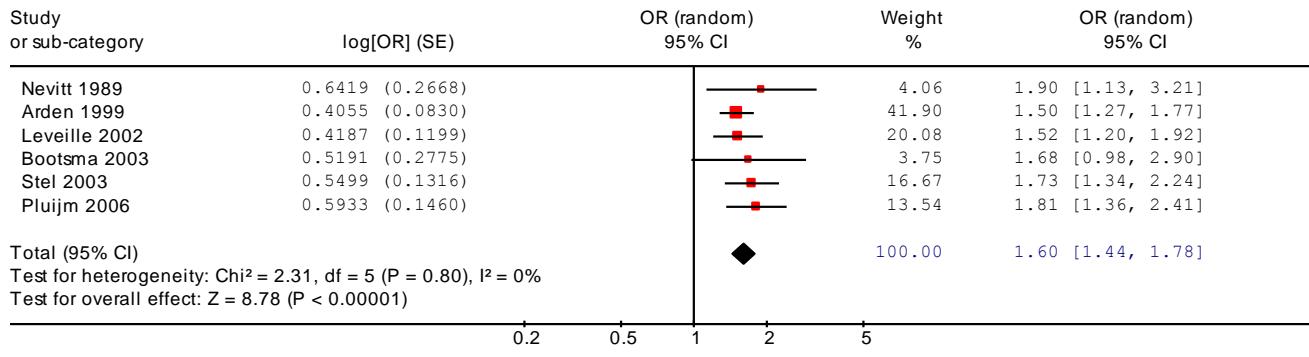

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 10 Poor self perceived health status vs good
 Outcome: 02 Recurrent fallers

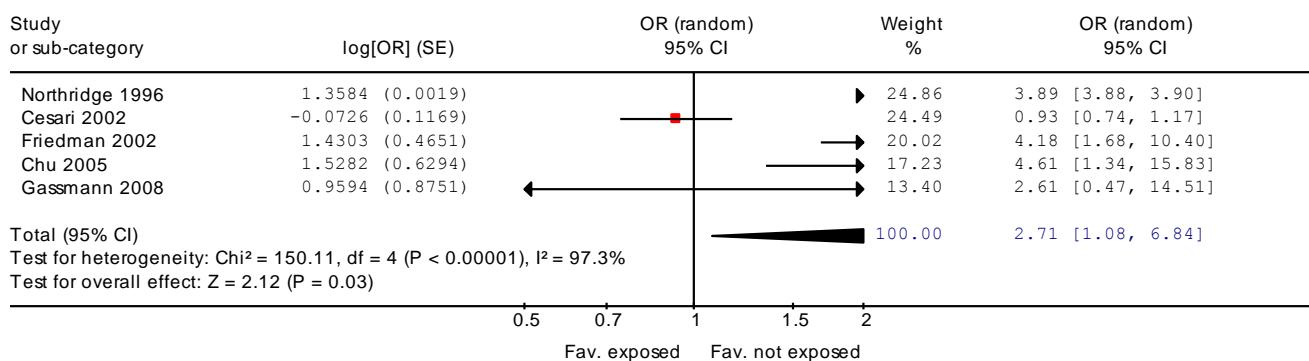

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 11 Pain vs no pain
 Outcome: 01 Any faller

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 11 Pain vs no pain
 Outcome: 02 Recurrent fallers

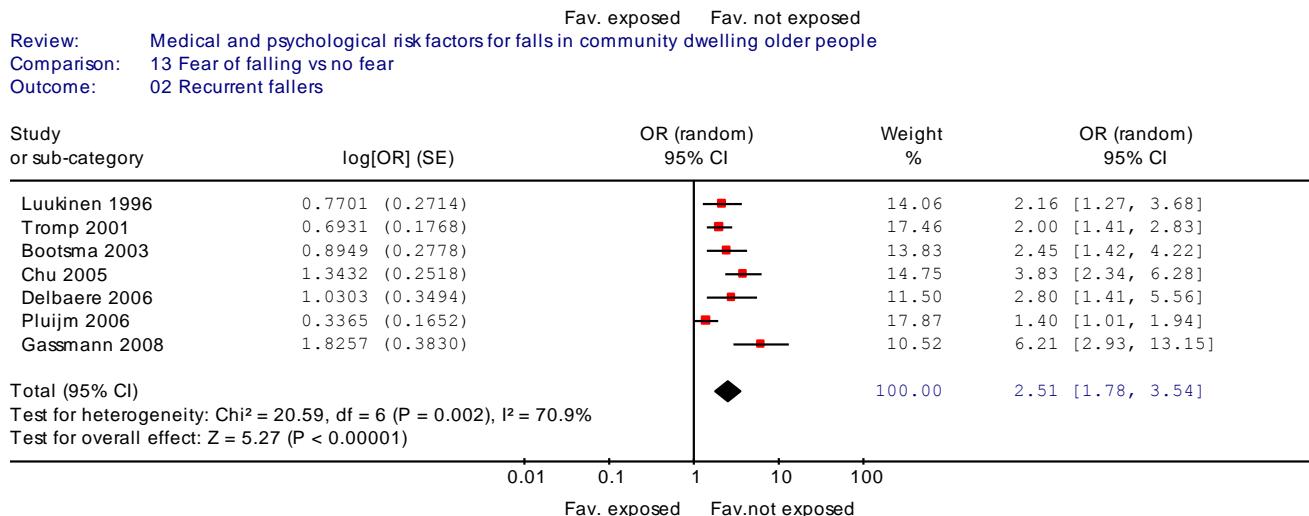

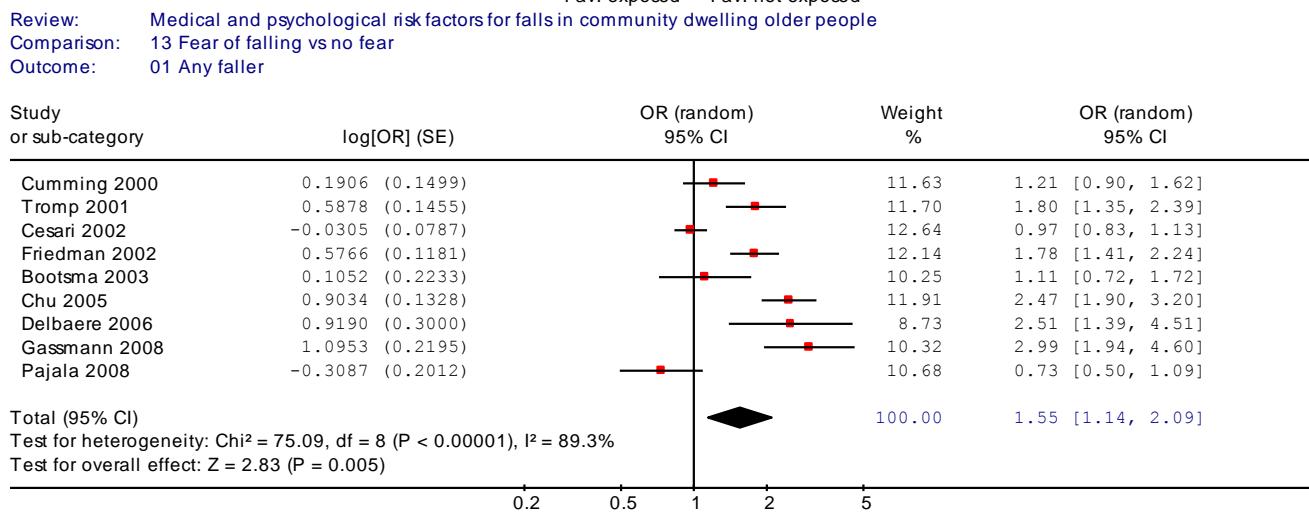

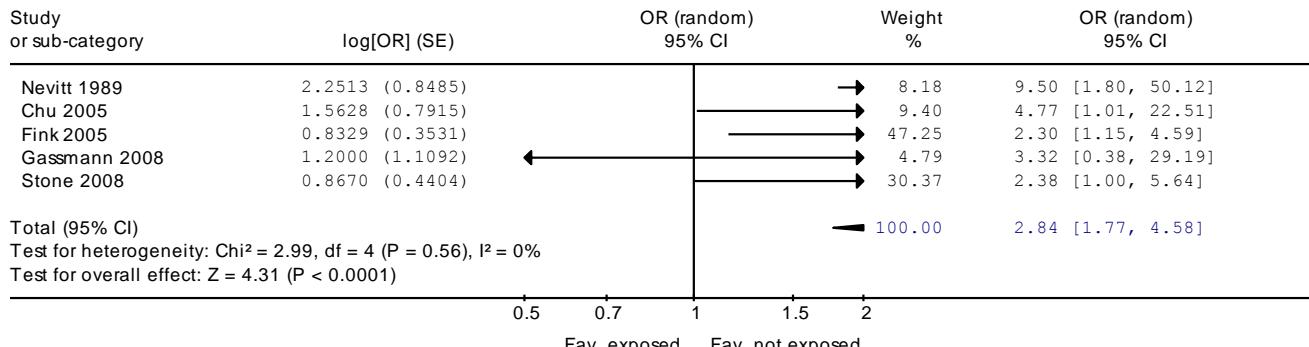

Review: Medical and psychological risk factors for falls in community dwelling older people
 Comparison: 12 Parkinson's disease vs no disease
 Outcome: 01 Any faller

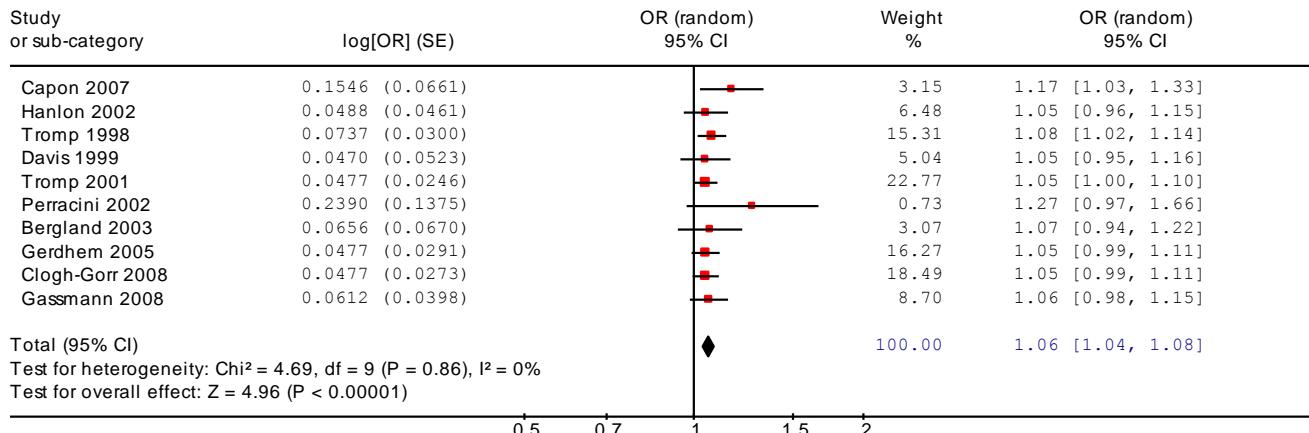

Review: Medical and psychological risk factors for falls in community dwelling older people

Comparison: 12 Parkinson's disease vs no disease

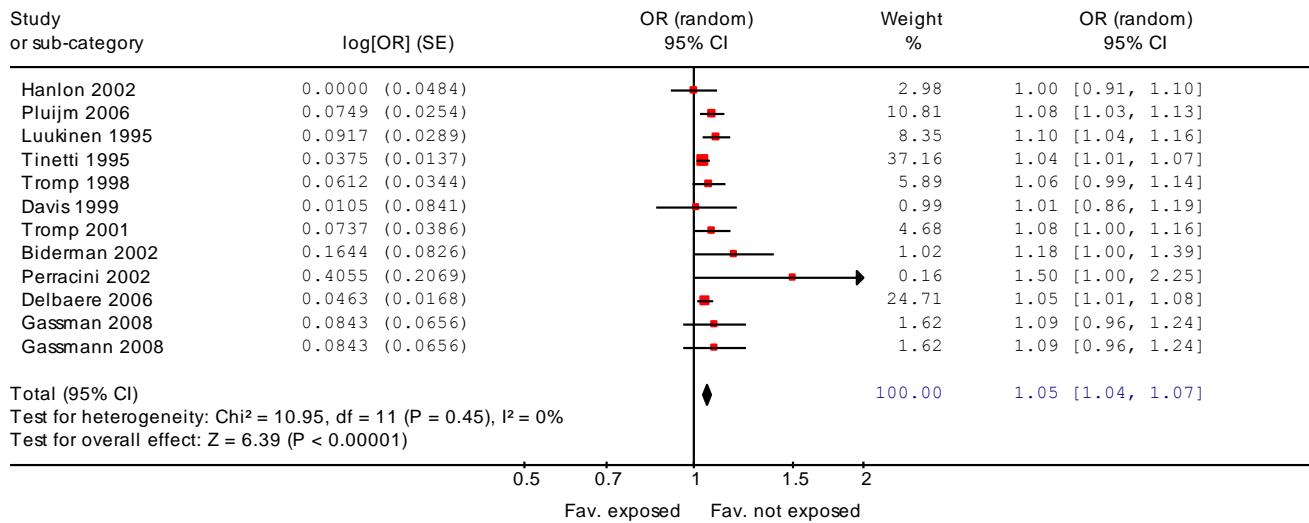

Outcome: 02 Recurrent faller

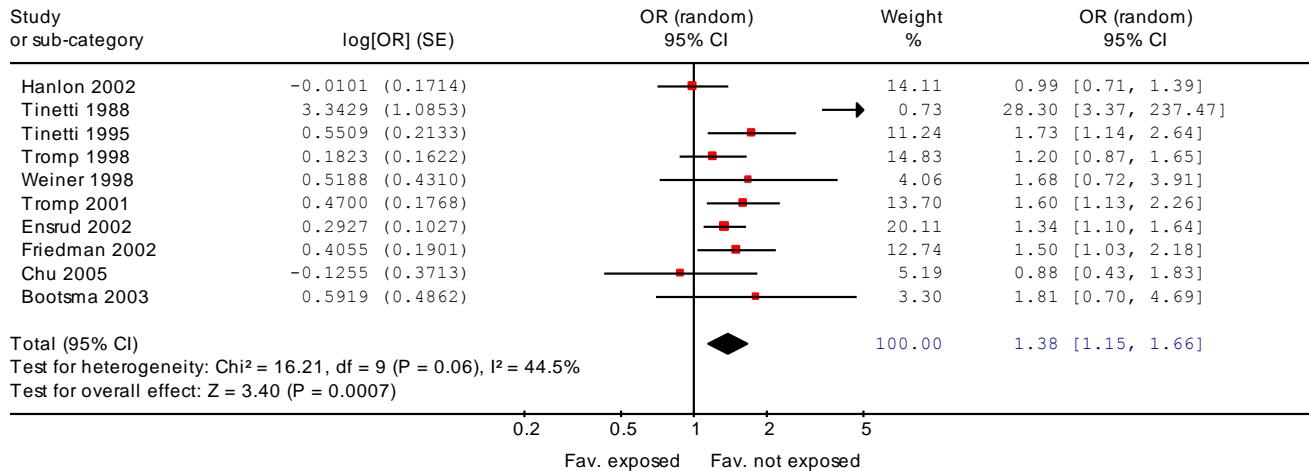

Review: Medication risk factors for falls in community dwelling older people
 Comparison: 01 Number of medications (for 1 drug increase)
 Outcome: 01 Any faller

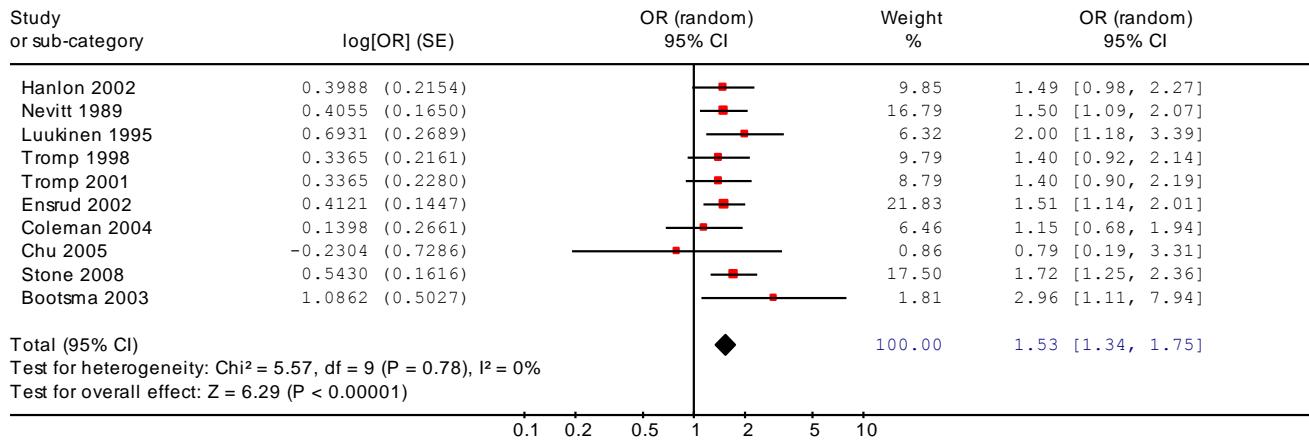

Review: Medication risk factors for falls in community dwelling older people
 Comparison: 01 Number of medications (for 1 drug increase)
 Outcome: 02 Recurrent fallers

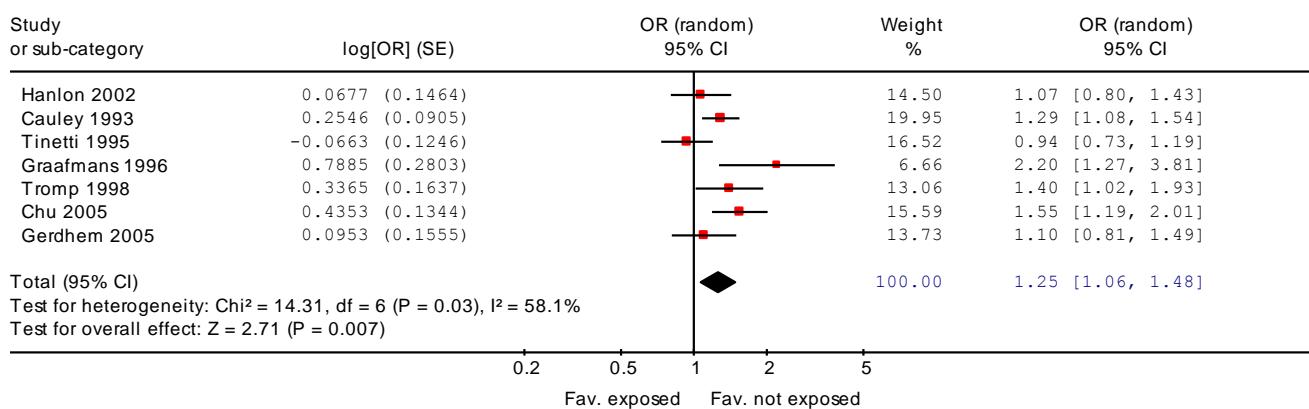

Review: Medication risk factors for falls in community dwelling older people
 Comparison: 02 Use of sedatives vs no use
 Outcome: 01 Any faller

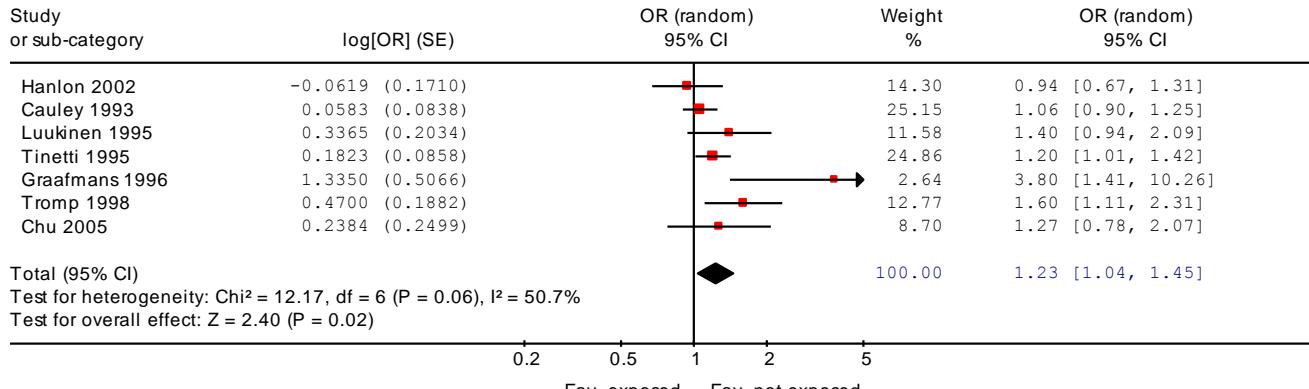

Review: Medication risk factors for falls in community dwelling older people
 Comparison: 02 Use of sedatives vs no use
 Outcome: 02 Recurrent fallers

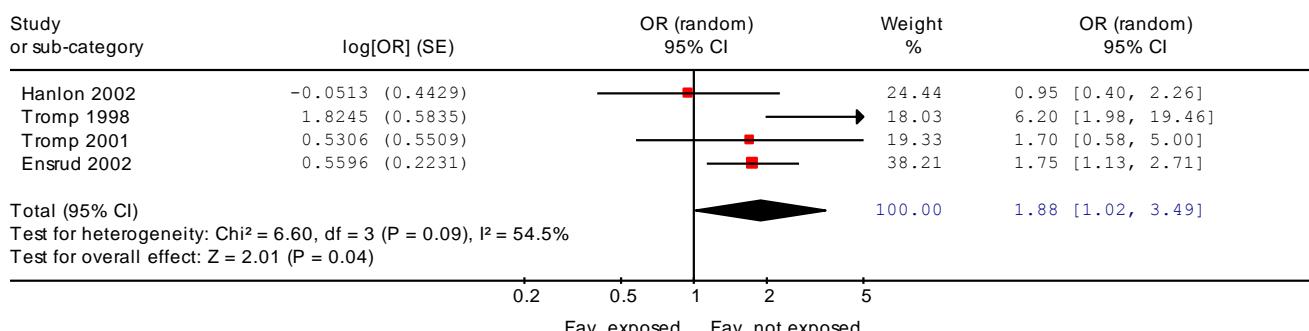

Review: Medication risk factors for falls in community dwelling older people
 Comparison: 03 Use of antihypertensives vs no use
 Outcome: 01 Any faller

Review: Medication risk factors for falls in community dwelling older people
 Comparison: 03 Use of antihypertensives vs no use
 Outcome: 02 Recurrent fallers

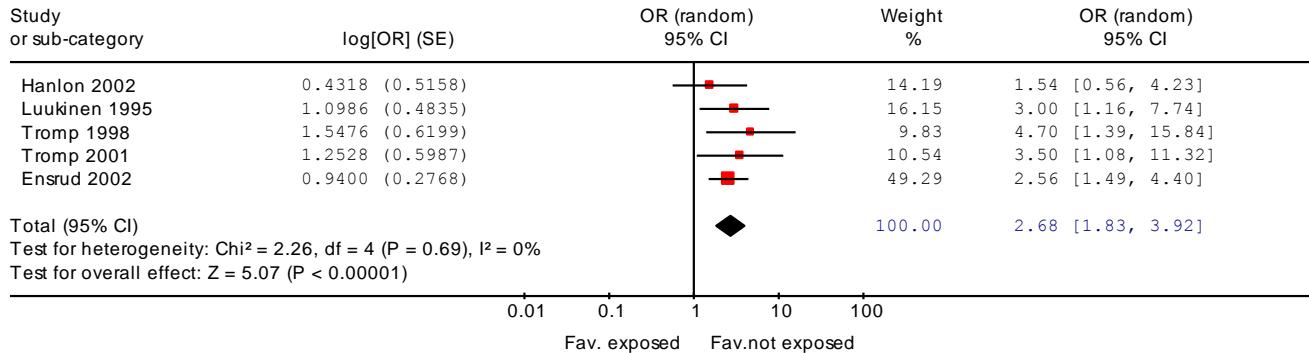

Review: Medication risk factors for falls in community dwelling older people
 Comparison: 04 Use of antiepileptics vs no use
 Outcome: 01 Any faller

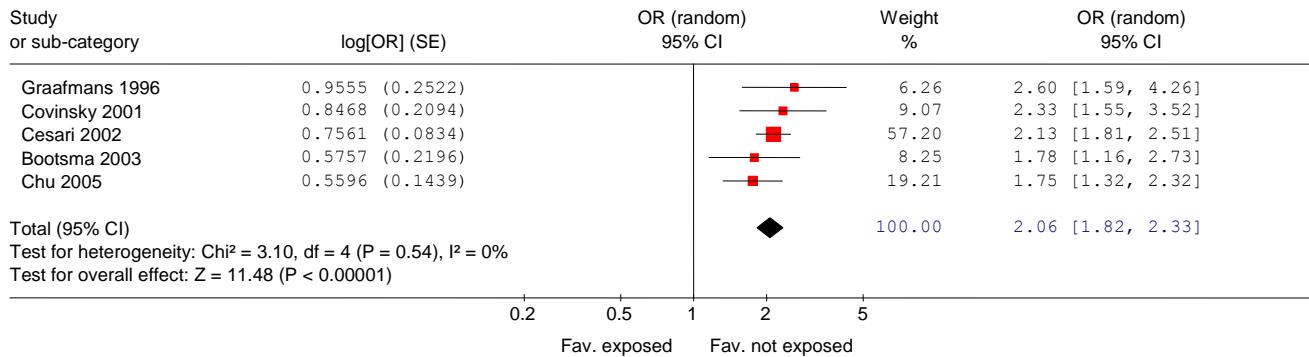

Review: Medication risk factors for falls in community dwelling older people

Comparison: 04 Use of antiepileptics vs no use

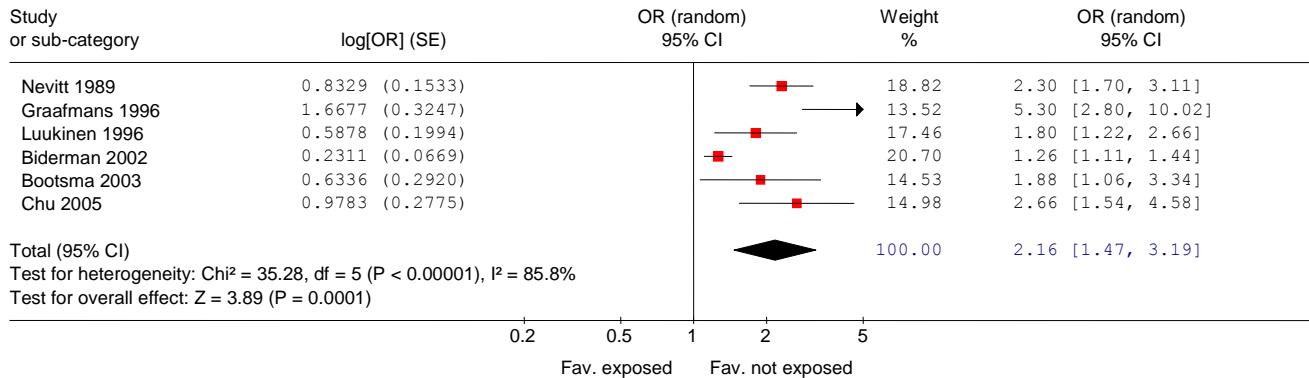

Outcome: 02 Recurrent fallers

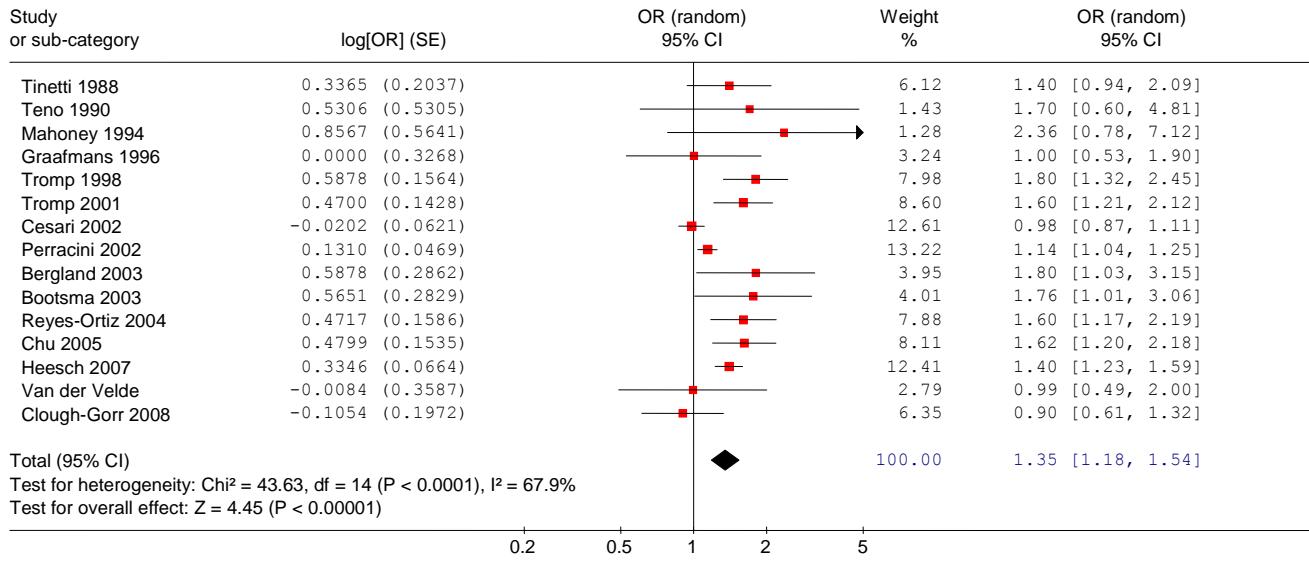

Review: Mobility and sensory risk factors for falls in community dwelling older people
 Comparison: 01 Gait problems vs no problems
 Outcome: 01 Any faller

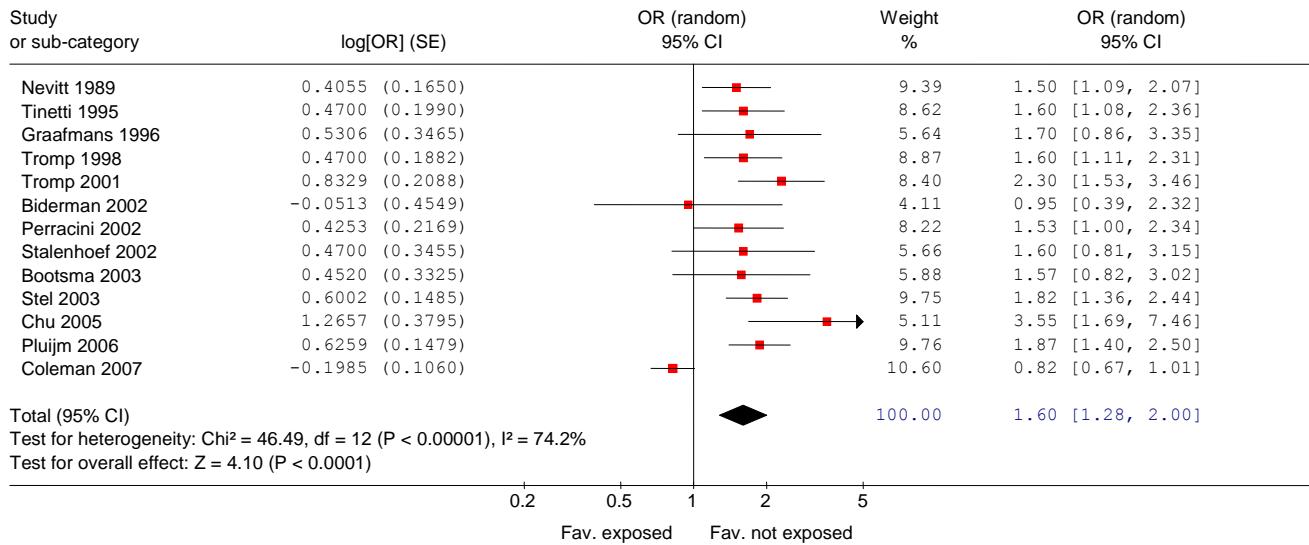

Review: Mobility and sensory risk factors for falls in community dwelling older people
 Comparison: 01 Gait problems vs no problems
 Outcome: 02 Recurrent fallers

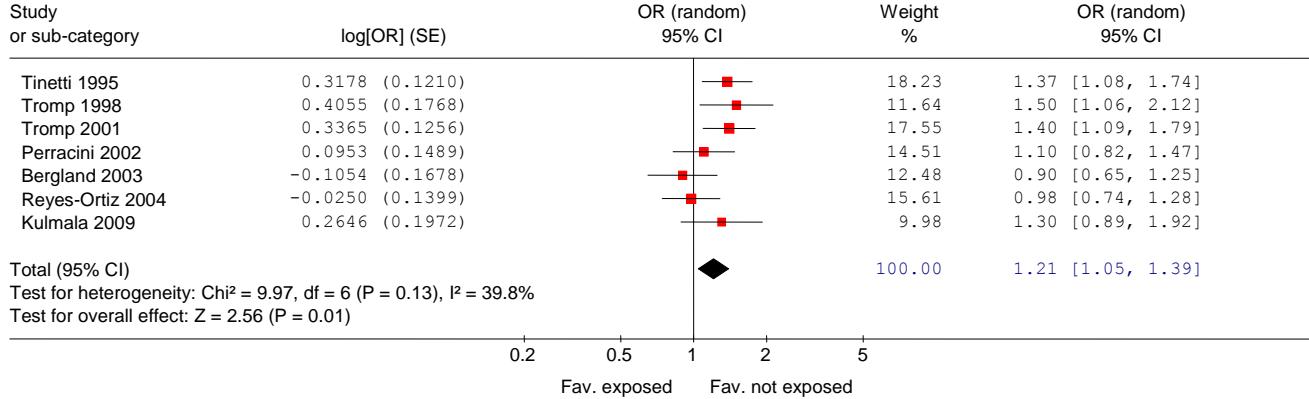

Review: Mobility and sensory risk factors for falls in community dwelling older people
 Comparison: 02 Vision impairment vs no impairment
 Outcome: 01 Any faller

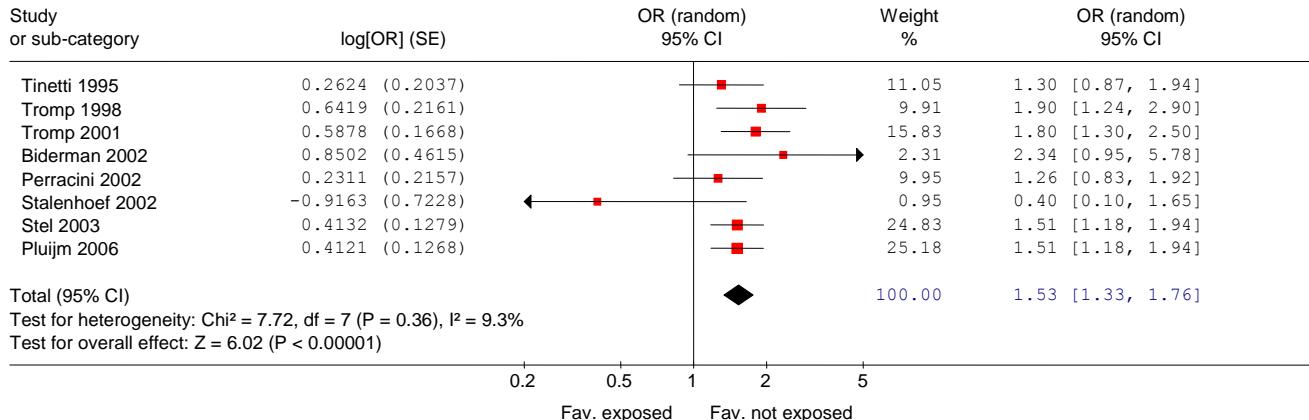

Review: Mobility and sensory risk factors for falls in community dwelling older people
 Comparison: 02 Vision impairment vs no impairment
 Outcome: 02 Recurrent fallers

Review: Mobility and sensory risk factors for falls in community dwelling older people
 Comparison: 03 Hearing impairment vs no impairment
 Outcome: 01 Any faller

Review: Mobility and sensory risk factors for falls in community dwelling older people
 Comparison: 03 Hearing impairment vs no impairment
 Outcome: 02 Recurrent fallers

eAppendix 2

Tables presenting additional subgroup analyses

Table 2.1.1. Risk Factor: Age (for 5 years increase); Outcome: Any faller.

Characteristic	Number of studies	Test for heterogeneity: χ^2 (p-value)	OR (95% CI)
All studies	18	106.086 (<0.0001)	1.12 (1.07-1.17)
Type of analysis			
Univariate	10	56.564 (<0.0001)	1.12 (1.05-1.20)
Multivariate	8	28.705 (0.0002)	1.12 (1.05-1.19)
Mean or median age of the study population			
≤ 75 years	9	22.834 (0.003)	1.11 (1.05-1.17)
>75 years	6	53.026 (<0.0001)	1.14 (1.05-1.23)
Duration of follow-up			
≤ 1 year	15	104.296 (<0.0001)	1.12 (1.06-1.18)
>1 year	3	1.789 (0.40)	1.16 (1.09-1.23)
Frequency of fall assessment			
Low	10	73.172 (<0.0001)	1.13 (1.05-1.21)
High	8	19.384 (0.007)	1.11 (1.05-1.18)

Table 2.2.1. Risk Factor: Gender (female vs male); Outcome: Any faller.

Characteristic	Number of studies	Test for heterogeneity: χ^2 (p-value)	OR (95% CI)
All studies	22	42.380 (0.003)	1.30 (1.18-1.42)
Type of analysis			
Univariate	15	18.851 (0.17)	1.32 (1.19-1.45)
Multivariate	7	20.166 (0.002)	1.28 (1.06-1.54)
Mean or median age of the study population			
≤ 75 years	11	14.721 (0.14)	1.41 (1.26-1.56)
>75 years	11	14.197 (0.16)	1.16 (1.04-1.29)
Duration of follow-up			
≤ 1 year	16	31.015 (0.008)	1.25 (1.11-1.40)
>1 year	6	2.117 (0.83)	1.43 (1.28-1.60)
Frequency of fall assessment			
Low	10	23.002 (0.006)	1.25 (1.10-1.41)
High	12	14.314 (0.21)	1.37 (1.21-1.55)

Table 2.3.1. Risk Factor: Living situation (alone vs not alone); Outcome: Any faller.

Characteristic	Number of studies	Test for heterogeneity: χ^2 (p-value)	OR (95% CI)
All studies	11	9.964 (0.44)	1.33 (1.21-1.45)
Type of analysis			
Univariate	10	9.831 (0.36)	1.33 (1.21-1.47)
Multivariate	1	0.000 (1.00)	1.20 (0.69-2.08)
Mean or median age of the study population			
≤ 75 years	3	3.435 (0.17)	1.39 (1.12-1.73)
>75 years	7	6.380 (0.38)	1.31 (1.15-1.48)
Duration of follow-up			
≤ 1 year	10	6.127 (0.72)	1.27 (1.15-1.41)
>1 year	1	0.000 (1.00)	1.63 (1.30-2.04)
Frequency of fall assessment			
Low	8	8.310 (0.30)	1.35 (1.20-1.52)
High	3	1.298 (0.52)	1.26 (1.04-1.53)

Table 2.4.1. Risk Factor: History of falls (yes vs no); Outcome: Any faller.

Characteristic	Number of studies	Test for heterogeneity: χ^2 (p-value)	OR (95% CI)
All studies	18	69.306 (<0.0001)	2.77 (2.37-3.25)
Type of analysis
