Supplemental Digital Content C: Descriptive statistics of implementation outcome variables at baseline and post-intervention

Variable	Fixed Effects Coefficients (95% CI)		Random Effects Coefficients				ICC(1)	
			Practice Variance		Residual Variance			
	Baseline (n=201) =	Post (n=140) =	Baseline	Post	Baseline	Post	Baseline	Post
Culture (%)	67.1 (61.8, 72.4)	78.0 (74.4, 81.6)	8.43**	4.21*	19.7	16.9	.154	.058
Structures/processes (%)	62.4 (57.5, 67.4)	78.8 (75.6, 82.1)	7.36**	3.55	20.6	16.0	.113	.047
Climate (%)	64.0 (61.2, 66.8)	69.9 (66.4, 73.4)	2.71	4.09*	15.6	15.2	.029	.067
Technologies (%)	62.4 (52.9, 71.8)	83.7 (78.6, 88.7)	13.1**	~ 0	31.6	22.4	.146	~ 0

** p<.01, *p<.10

= Inner context domain scores are reported only for the 14 practices participating in the Office Inventory at both baseline and post. They are calculated at the individual staff level, using linear mixed-effects models to account for clustering by practice. Averages thus differ slightly from those reported in SDC B.
