

### **Supplemental material 3 – Different meningococcal vaccines recommended in the 2015 French vaccination schedule**

1) General recommendation (the whole population):

- 12 months: 1 dose (meningococcal serogroup C conjugate vaccine)
- Until 24 years old: 1 catch-up dose (meningococcal serogroup C conjugate vaccine)

2) Specific indications for at-risk patients (meningococcal serogroup ACYW135 conjugate vaccine)

- Complement terminal fraction deficiency
- Eculizumab treatment
- Asplenia
- Haematopoietic stem cell transplant

3) Patients who have been vaccinated with a meningococcal serogroup ACYW135 polysaccharide vaccine or with an AC polysaccharide vaccine: must wait three years before being vaccinated with a conjugate vaccine

4) Recommendation for contacts around a patient with meningococcal disease

- Serogroup C disease: meningococcal serogroup C conjugate vaccine
- Serogroup ACYW135: meningococcal serogroup ACYW135 conjugate vaccine
- Children between 6 and 12 months: meningococcal AC polysaccharide vaccine
