

**SDC 4.** Characteristics of Antibiotic Susceptibility, Antibiotic Agents Used and Treatment Outcomes of *Stenotrophomonas Maltophilia* Infections in the Study Group

Characteristic	Patients (N = 31)
Antibiotic susceptibility	
Levofloxacin	29 (94%)
TMP/SMX	29 (94%)
Minocycline	29 (94%)
Ceftazidime	2 (6%)
Antibiotic treatment	
Ciprofloxacin	5 (16%)
TMP/SMX	10 (32%)
Ciprofloxacin + TMP/SMX	8 (25%)
Ciprofloxacin + minocycline	4 (13%)
No specific treatment	4 (13%)
Days from positive culture until demise, median (IQR), <i>n</i>	36.0 (7.50-104.0)
Days from positive culture until negative culture, median (IQR), <i>n</i>	11.0 (4.75-23.75)

IQR: interquartile range; TMP/SMX: trimethoprim and sulfamethoxazole
