**TABLE: Summary of Microbiological Outcome<sup>†</sup> Definitions**

Microbiological Outcome	Definition
Favorable	All baseline pathogens eradicated or presumed eradicated
Unfavorable	Any baseline pathogen with persistence, presumed persistence or persistence with increasing MIC
Indeterminate	Source specimen unavailable for culture and the patient's clinical outcome was assessed as indeterminate

<sup>†</sup>Microbiological outcomes were based on each etiologic pathogen isolated at baseline and assessed per-patient and per-etiological cIAI pathogen.

MIC, minimum inhibitory concentration.
