

Pain Symptoms Related to Activity

Fig. E-1

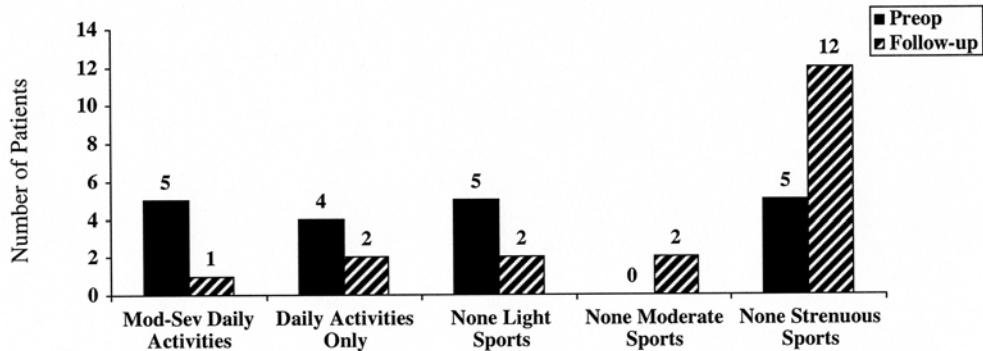

Distribution of pain scores preoperatively and at the most recent follow-up evaluation, according to the highest activity level possible without pain. The difference in the distribution of the responses between evaluations was significant ($p < 0.001$).

Swelling Symptoms Related to Activity

Fig. E-2

Distribution of swelling scores preoperatively and at the most recent follow-up evaluation, according to the highest activity level possible without swelling. The difference in the distribution of the responses between evaluations was significant ($p < 0.001$).

Giving-way Symptoms Related to Activity

Fig. E-3

Distribution of giving-way scores preoperatively and at the most recent follow-up evaluation, according to the highest activity level possible without giving-way. The difference in the distribution of the responses between evaluations was significant ($p < 0.001$).
