Fig. E-1B

**Fig. E-1A** Illustration of the loading device, which utilized both lateral and medial attachments to the external fixator pins. The load-displacement graph (**Fig. E-1B**) was displayed on a computer with use of LabVIEW 7.0 (National Instruments, Austin, Texas). At the beginning of all loading sessions, the joint was compressed to 1.96 N (200 g) to establish a reproducible starting position. Rats underwent fifty cycles of either 10% strain or 2400 g of load per loading session.
