

TABLE E-1 Hospital Volume for Primary and Revision Surgery Among 263 Patients with Confirmed Revisions of Index Primary Total Hip Replacement

	Total Hip Replacement Volume* of Hospital Where Subsequent Revision Total Hip Replacement Performed†				
Total Hip Replacement Volume* of Hospital Where Primary Total Hip Replacement Performed (1995 to 1996)	≤25	26 to 50	51 to 100	>100	Total
≤25	86	7	6	5	104
26 to 50	7	51	5	3	66
51 to 100	3	3	65	0	71
>100	3	3	0	16	22
Total	99	64	76	24	263

*Hospital volume of primary elective total hip replacement in U.S. Medicare population. †Darker shading indicates that the revision total hip replacement was performed in a hospital in a lower-volume stratum than the hospital where the primary procedure was performed (nineteen revisions; 7.2%). No shading indicates that the primary and subsequent revision total hip replacements were performed in hospitals in same volume stratum (218 revisions; 83%). Lighter shading indicates that the revision total hip replacement was performed in a hospital in a higher-volume stratum than the hospital where the primary total hip replacement was performed (N = 26; 9.9%).
