		Stand. dev.	4.8	7.5	5.4	6.9	4.2	9.6	7.9	9.4	9.2	10.8		Stand. dev.	4.5	7.0	6.0	3.7	4.1	5.4	4.9	4.6	3.2	3.5

*The mean moment arm and standard deviation are shown for abduction and flexion angles of 2.5°, 30°, 60°, 90°, and 120°. ϕ denotes a significant difference in the mean muscle moment arm over the joint range of motion due to reverse total shoulder arthroplasty (reconstructed shoulder), ψ denotes a significant difference in the mean muscle moment arm due to joint angle effects, and χ denotes a significant interaction between joint angle effects and shoulder anatomy.

TABLE E-2 Results of Two-Way Analysis of Variance of Moment Arms of the Latissimus Dorsi Subregions and the Teres Major During Coronal-Plane Abduction and Flexion in the Anatomical Shoulders and Those with the Reverse Total Shoulder Prosthesis*
