*The baseline data are presented as the number, with the percentage in parentheses, except for age, BMI, and laboratory values, which are presented as the mean and standard deviation. BMI = body mass index, ASA PS = American Society of Anesthesiologists physical status, CCBs = calcium channel blockers, ACE = angiotensin-converting enzyme, ARBs = angiotensin II receptor blockers, NSAIDs = nonsteroidal anti-inflammatory drugs, COX = cyclooxygenase, WBC = white blood cell, CRP = C-reactive protein, AST = aspartate aminotransferase, ALT = alanine aminotransferase, sCR = serum creatinine, GFR = glomerular filtration rate, and BSA = body surface area. The PSB was used to determine balance after propensity analysis. †All weighted PSB values using inverse probability of treatment weighting (IPTW) were <0.2.
