

# Race and Anterior Cruciate Ligament Reconstruction Revision Risk

The incidence of anterior cruciate ligament reconstruction (ACLR) is rising...

...but little is known about the role of race/ethnicity in ACLR prognosis

27,258 universally insured patients who underwent primary ACLR

Categorized as

White

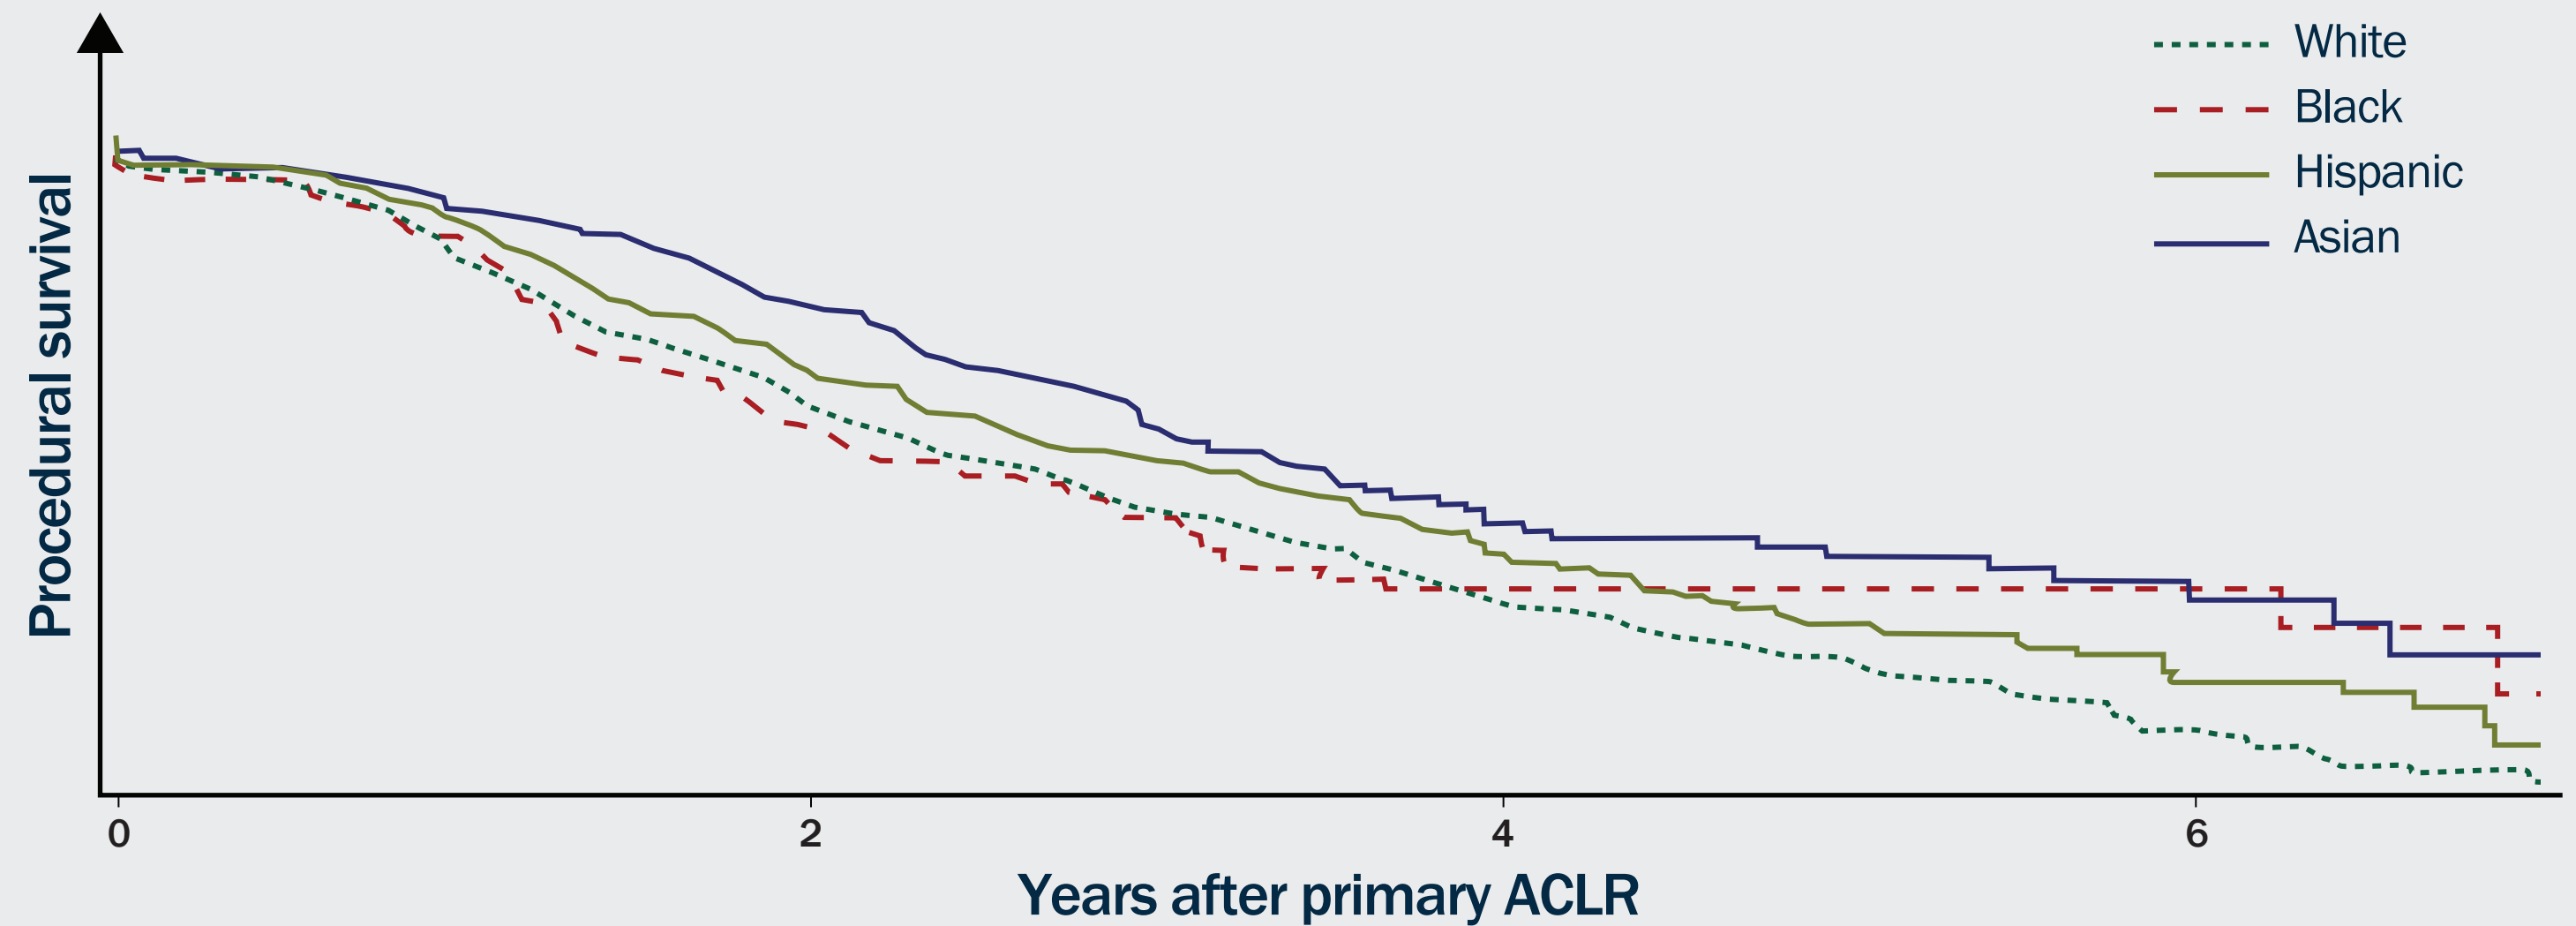

Black

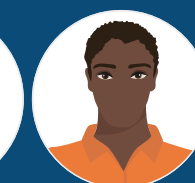

Hispanic

Asian

Procedural survival risk:

Black lower than White after 3.5 years

Asian and Hispanic lower at all times

**In this universally insured cohort, minority patients had similar or lower risk of ACLR revision than white patients**

The Association Between Race/Ethnicity and Revision Following ACL Reconstruction in a Universally Insured Cohort
