

# Total Knee Arthroplasty Converted from Medial Unicompartmental Knee Arthroplasty: What is the Revision Risk?

Comparison of risk of revision among the three groups

Risk of revision is 3-fold higher in UKA converted to TKA

Survival of both revised groups is similar

Survival of a medial UKA converted to TKA is similar to that of a TKA revised from a TKA

Revision Risk for Total Knee Arthroplasty Converted from Medial Unicompartmental Knee Arthroplasty: Comparison with Primary and Revision Arthroplasties, Based on Mid-Term Results from the Danish Knee Arthroplasty Registry
