

Supplemental Digital Content 1. Figures that demonstrate the ability to visualize EHR data BMI percentile distribution by subgroup.

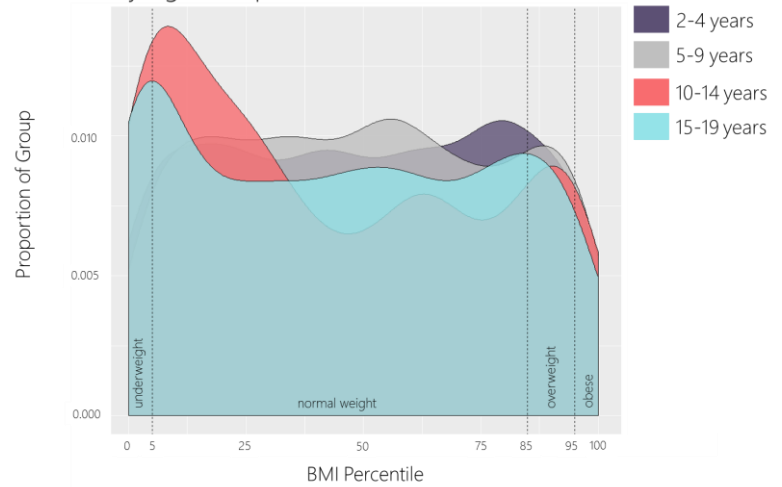

These figures show BMI percentile distribution by subgroup in La Plata County, Colorado. Electronic health records were used to create the analytical dataset and included a final sample of 3 965 records for analysis. BMI percentiles were assigned and used to define weight categories as shown below. The distribution of underweight (<5th percentile), normal weight (5th percentile to <85th percentile), overweight (85th percentile to <95th percentile), and overweight (95th percentile and greater) are given by subgroup.

BMI Percentile Distributions

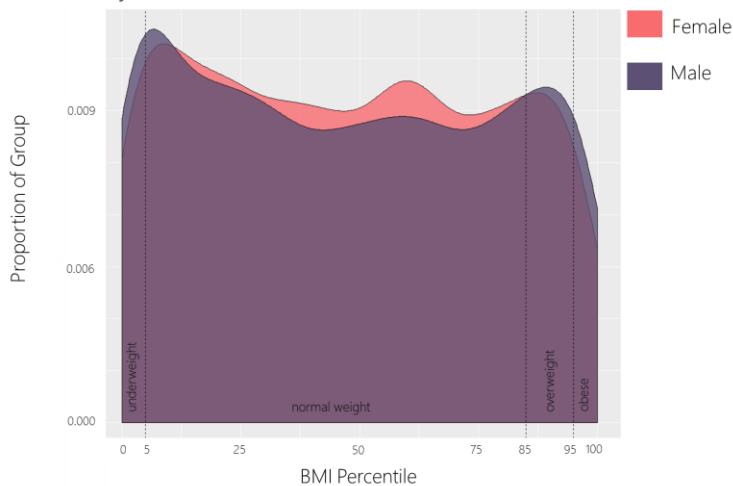

By Insurance Status

By Age Group

By Sex
