

Supplemental Table S1. Data sources and statistical comparisons

| Name | Tissue | Source | Comparison |
|---|------------------|--|---|
| Fig. 2A – Comparison of LKB1 associations from various datasets | | | |
| MSKCC | lung adeno | Chitale et al, 2009 | t-test: LKB1 mut (16) vs LKB1 WT (75) |
| UNC | lung adeno | GSE26939 | t-test: LKB1 mut (n=6) vs LKB1 WT (n=75) |
| Wash U | lung adeno | GSE12667 | t-test: LKB1 mut (n=7) vs LKB1 WT (n=34) |
| Michigan | lung adeno | Shedden et al, 2008 | Linear regression with LKB1 probeset 41657_at (n=178) |
| TCGA | lung adeno | https://confluence.broadinstitute.org/display/GDAC/Home (LUAD RNAseqv2 Level3 RSEM downloaded 2013/07/15) | t-test: LKB1 mut (n=67) vs LKB1 WT (n=339) |
| MSKCC2 | lung adeno | Chitale et al, 2009 | t-test: LKB1 mut (n=12) vs LKB1 WT (n=90) |
| USC | lung adeno | GSE32861 | t-test: LKB1 mut (n=8) vs LKB1 WT (n=48) |
| Sanger | NSCLC cell lines | www.broadinstitute.org/cgi-bin/cancer/datasets.cgi (Sanger_Cell_Line_Project_Affymetrix_QCed_Data_n798.gct) | t-test: LKB1 mut (n=25) vs LKB1 WT (n=44) |
| CCLC | NSCLC cell lines | www.broadinstitute.org/ccle/home (CCLE_Expression_2012-09-29.res) | t-test: LKB1 mut (n=34) vs LKB1 WT (n=46) |
| A549 | NSCLC cell line | GSE51266 | avg diff: LKB1 WT (n=3) vs pBABE vector (n=3) |
| H2122 | NSCLC cell line | GSE51266 | avg diff: LKB1 WT (n=3) vs pBABE vector (n=2) |
| Ji (A) | Mouse lung adeno | GSE6135 | t-test: LKB1/KRAS primary adeno (n=5) vs KRAS primary adeno (n=5) |
| Ji (B) | Mouse lung adeno | GSE6135 | t-test: LKB1/KRAS primary adeno (n=5) vs KRAS/p53 primary adeno (n=5) |
| Carretero | Mouse lung adeno | GSE21581 | t-test: LKB1/KRAS primary adeno (n=9) vs KRAS primary adeno (n=9) |
| Carretero Mets | Mouse lung adeno | GSE21581 | t-test: LKB1/KRAS metastases (n=17) vs LKB1/KRAS primary (n=9) |

P-value determined by hypergeometric test. Only genes represented by probesets in the Affymetrix U133A array platform were included in this analysis (n=13211). When comparisons were made between different platforms, only genes included in both platforms were considered for statistical calculations. Raw P-values are presented, without adjustment for multiple hypothesis testing.

Supplemental Table S3. Selected results for gene sets significantly associated with mitochondria/mTOR gene cluster.

| | Tissue/Cell line | P-value* |
|---|------------------|----------|
| Mitochondrial Localization (MitoCarta) | | 3.6e-22 |
| ELK1 Transcription Factor Predicted promoter elements (msigDB) | | 2.2e-13 |
| Splicing Factor 1 Transcription Factor Predicted promoter elements (msigDB) | | 1.1e-9 |
| NRF1 Transcription Factor Predicted promoter elements (msigDB) | | 3.9e-7 |
| MYC Transcription Factor Predicted promoter elements (msigDB) | | 4.2e-7 |
| LY-294002 Repression | HL60 | 1.1e-8 |
| | MCF7 | 2.2e-17 |
| | PC3 | 3.0e-12 |
| Sirolimus Repression | HL60 | 3.0e-12 |
| | MCF7 | 1.2e-19 |
| | PC3 | 1.2e-19 |
| PD0325901 Repression | Multiple | 1.9e-24 |
| PGC1A Induction | C2C12 | 1.3e-10 |

*P-value determined by hypergeometric test for the significance of overlap between top 200 genes associated with mitochondria/mTOR cluster (Supplementary data 1) compared to the indicated gene set. For pre-determined genesets, these are used as downloaded. For associations derived from other studies, the top 200 associated genes are used for comparison.

Supplemental Table S4. Selected results for gene sets significantly associated with NRF2 gene cluster.

| | Tissue/Cell line | P-value* |
|--------------------------------------|------------------|----------|
| AP1 Transcription Factor | | |
| Predicted promoter elements (msigDB) | | 6.2e-12 |
| NRF2 Transcription Factor | | |
| Predicted promoter elements (msigDB) | | 5.2e-11 |
| dmPGJ2 induction | HL60 | 1.2e-19 |
| | PC3 | 5.5e-22 |
| | MCF7 | 1.0e-39 |
| KEAP1 -/- | Mouse liver | 8.8e-8 |
| KEAP1 mutant | Lung SqCC | 1.7e-62 |
| NRF2 mutant | Lung SqCC | 9.6e-69 |
| siNRF2 repressed | A549 | 2.9e-24 |

*P-value determined by hypergeometric test for the significance of overlap between top 200 genes associated with NRF2 cluster (Supplementary data 1) compared to the indicated gene set. For pre-determined genesets, these are used as downloaded. For associations derived from other studies, the top 200 associated genes are used for comparison.

Supplemental Table S5. Selected results for gene sets significantly associated with the FOX/ CREB gene cluster.

| | Tissue/Cell line | P-value* |
|---|------------------|----------|
| CREB Transcription Factor | | |
| Predicted promoter elements (msigDB) | | 3.1E-04 |
| | MCF7 | 2.2E-17 |

a: P-values determined by hypergeometric test

b: 200 genes most strongly overexpressed by lung adenocarcinomas classified by the LKB1-loss score as LKB1-deficient.

c: 200 genes most strongly overexpressed by lung adenocarcinomas (GSE26939) classified by Wilkerson et al as ‘magnoid’ subtype.

d: 10 genes reported to be overexpressed by LKB1 mutant tumors (n=5) compared to LKB1 wild-type tumors (n=14).

Supplemental Table S7. Association of LKB1 loss with copy number alterations in lung adenocarcinoma.

| Chromosomal region | Alteration | Cancer genes in region | P-value | Q-value |
|---|---------------|------------------------|---------|---------|
| Lower copy number values in LKB1-deficient lung adenocarcinomas | | | | |
| 19p13.2 | Deletion | KEAP1 | 5.2E-13 | 4.1E-11 |
| 19p13.3 | Deletion | STK11 | 1.8E-08 | 7.0E-07 |

*P-value determined by Student's t-test comparing continuous variable copy number data reported for TCGA lung adenocarcinomas expressing LKB1 loss signature (n=149) to adenocarcinomas expressing LKB1 WT signature (n=295). Q-values represent adjustment for multiple-hypothesis testing of 79 regions of amplification or deletion determined by TCGA GISTIC analysis.

Supplemental Table S8. Association of LKB1 loss with differences in microRNA expression in lung adenocarcinoma.

| miRNA species | Average expression (log2) | Fold difference (log2) | P-value | Q-value |
|--|---------------------------|------------------------|---------|---------|
| Increased expression in LKB1-deficient lung adenocarcinomas | | | | |
| hsa-mir-582 | 7.7 | 1.3 | 9.2E-19 | 7.9E-17 |

*P-value determined by Student's t-test comparing miRNAseq expression (log2 values) for TCGA lung adenocarcinomas expressing LKB1 loss signature (n=125) to adenocarcinomas expressing LKB1 WT signature (n=249). Analysis was limited to miRNA species with average expression values greater than 4.0; Q-values represent adjustment for multiple-hypothesis testing of 173 miRNA species.

Supplementary Table S9. Proteins and phosphorylated proteins differentially expressed in LKB1-deficient lung adenocarcinomas

| Protein | P-value | Q-value | Protein | P-value | Q-value |
|--|---------|---------|--|---------|---------|

*P-value determined by Student's t-test comparing RPPA expression values (arbitrary units) for TCGA lung adenocarcinomas expressing LKB1 loss signature (n=80) to adenocarcinomas expressing LKB1 WT signature (n=153). Q-values represent adjustment for multiple-hypothesis testing of 186 total RPPA targets.

Supplemental Table S10. Association of LKB1 loss with clinical variables in lung adenocarcinoma.

| | LKB1-loss classifier | | Fisher test | |
|---|--|---------------------------|--------------------------|----------|
| | Number of Samples (LKB1 loss / total) | Fraction LKB1 loss (%) | Odds Ratio (95% C.I.) | P-value |
| TCGA Lung Adenocarcinomas | | | | |
| Stage I | 71 / 217 | 32.7 | NA | NA |
| Stage II | 32 / 88 | 36.4 | 1.2 (0.67, 2.0) | 0.59 |
| Stage III | 22 / 64 | 34.4 | 1.1 (0.57, 2.0) | 0.88 |
| Stage IV | 9 / 20 | 45 | 1.7 (0.59 4.7) | 0.32 |
| Never smoker | 13 / 55 | 23.6 | 0.48 (0.22, 0.97) | 0.031 |
| Ever smoker | 96 / 245 | 39.2 | | |
| Pooled Analysis Lung Adenocarcinomas | | | | |
| Stage I | 153 / 476 | 32.1 | NA | NA |
| Stage II | 51 / 148 | 34.5 | 1.1 (0.68 1.7) | 0.62 |
| Stage III | 31 / 118 | 26.3 | 0.73 (0.43, 1.2) | 0.27 |
