ROC is the area under the receiver-operator-characteristic curve, the cut-off score that gave the maximum sum of the sensitivity and specificity for each test and distance, AC1 level of agreement between the CNLan and clinical tests, PreP is the predictive pass value for the clinical test, and PreF is the predictive fail values for the clinical tests. CI is the confidence interval. All the set of results will give the reader the complete information about each test at each specific distance.
