

Supplementary Material for:

Brain activations during pain: a neuroimaging meta-analysis
of pain patients and healthy controls

Karin B. Jensen, Christina Regenbogen, Margarete C. Ohse, Johannes Frasnelli, Jessica Freiherr & Johan N. Lundström

Supplementary Figure 1: Complete brain coverage of Figure 1.

Supplementary Figure 2: Complete brain coverage of Figure 2

Supplementary Figure 3: Complete brain coverage of Figure 3.

Supplementary Table 1: List of studies including healthy controls.

Supplementary Table 2: Number and distribution of brain foci originating from healthy subjects regarding different stimulation methods and body parts.

Supplementary Table 3: List of studies including patients.

Supplementary Table 4: Number and distribution of brain foci originating from patients with different conditions, stimulation methods, and stimulated part of the body.

Supplementary Tables 5: Activation likelihood estimates for different painful stimulation methods (**a** – thermal pain, **b** – distention, **c** – electrical) across all functional imaging studies between 1990 and 2014 in healthy subjects ($p<.05$ cluster-level corrected inference using $p<.001$ uncorrected at voxel-level as the cluster-forming threshold).

Supplementary Tables 6: Activation likelihood estimates for different stimulated body parts (**a** – arm, **b** – hand, **c** – leg) across all functional imaging studies between 1990 and 2014 in healthy subjects ($p<.05$ cluster-level corrected inference using $p<.001$ uncorrected at voxel-level as the cluster-forming threshold).

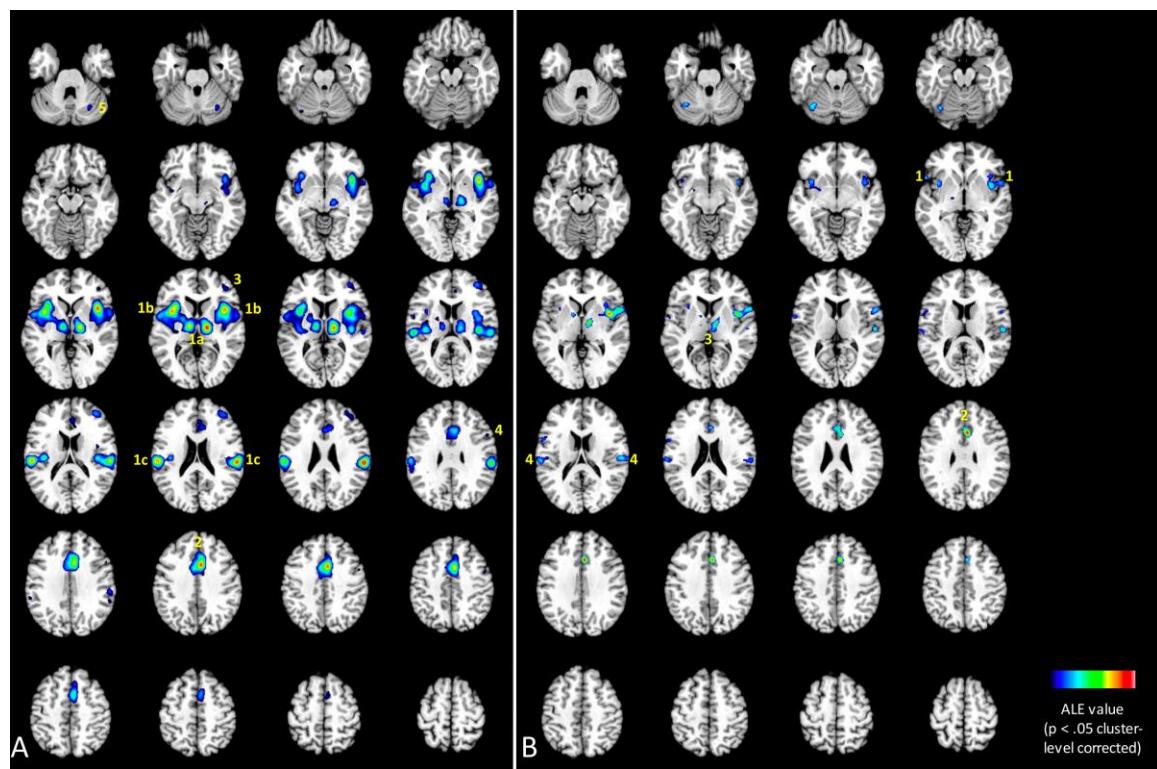

Supplementary Tables 7: Activation likelihood estimates for different patient groups (**a** – fibromyalgia, **b** – IBS, **c** – headache) across all functional imaging studies between 1990 and 2014 ($p<.05$ cluster-level corrected inference using $p<.001$ uncorrected at voxel-level as the cluster-forming threshold).

Supplementary Tables 8: Activation likelihood estimates for different painful stimulation methods (**a** – pressure, **b** – distention, **c** – thermal pain) across all functional imaging studies between 1990 and 2014 in patients ($p<.05$ cluster-level corrected inference using $p<.001$ uncorrected at voxel-level as the cluster-forming threshold).

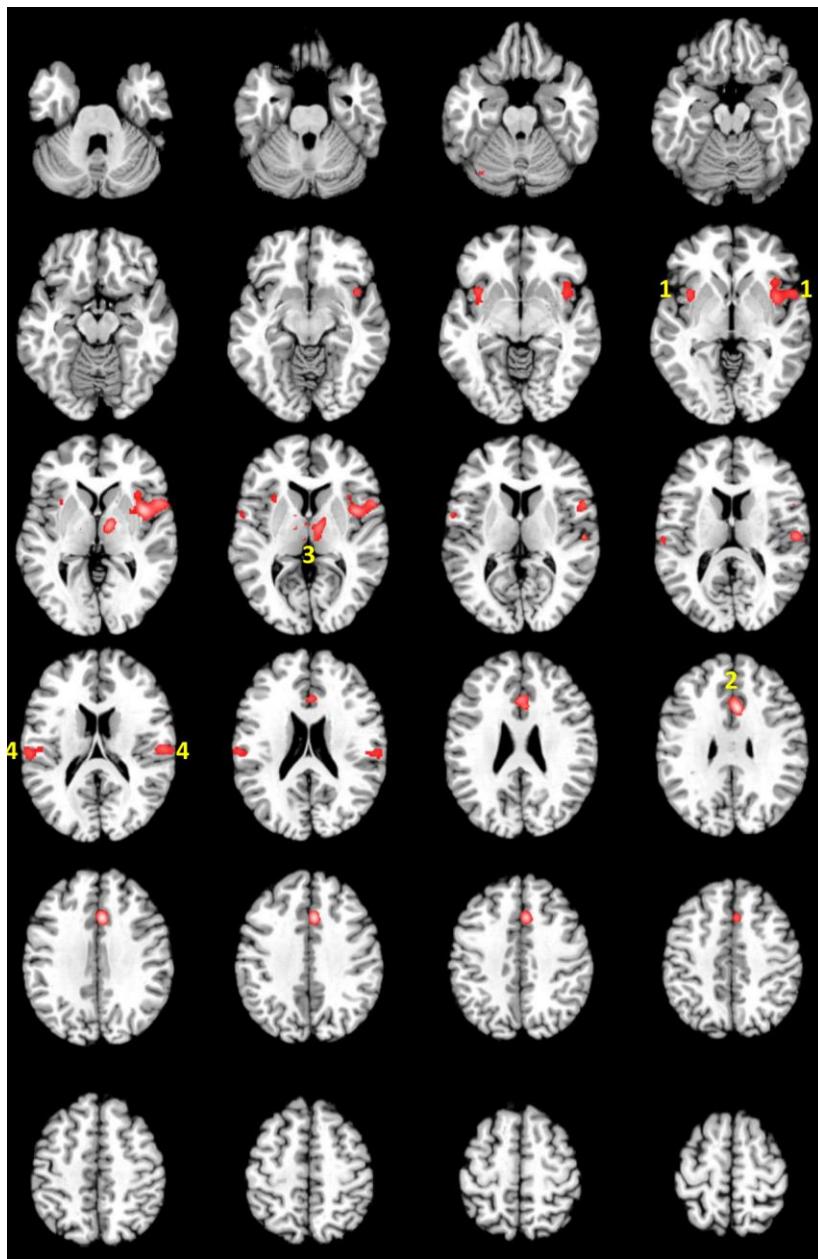

Supplementary Tables 9: Activation likelihood estimates for different stimulated body parts (**a** – hand, **b** – face, **c** – rectum) across all functional

imaing studies between 1990 and 2014 in patients ($p < .05$ cluster-level corrected inference using $p < .001$ uncorrected at voxel-level as the cluster-forming threshold).

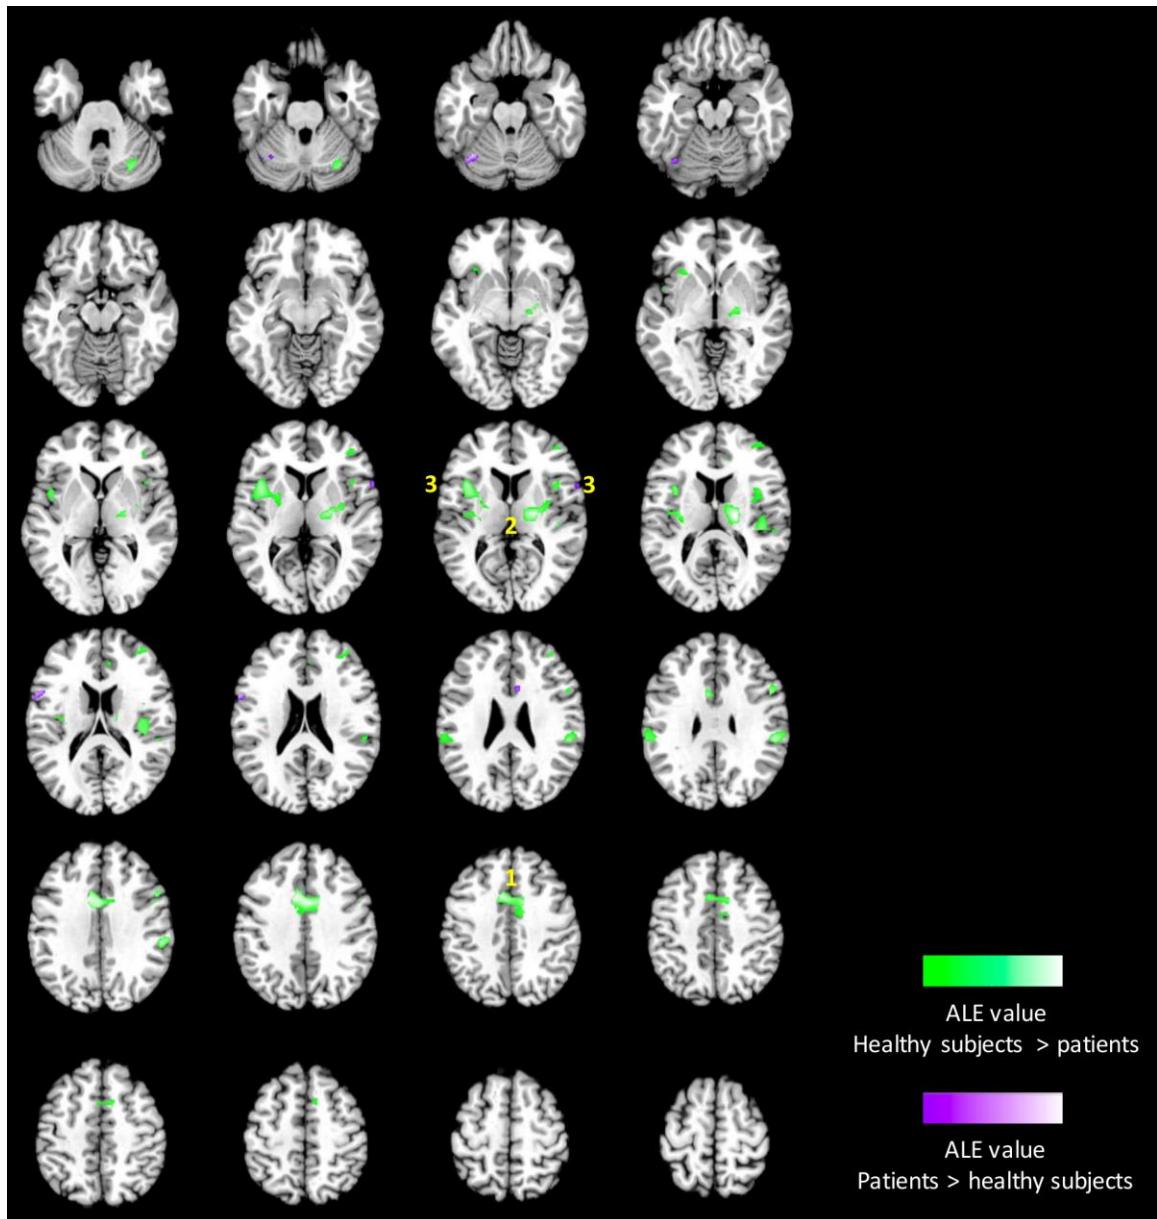

Supplementary Figure 1: Activation likelihood estimates (ALE) for noxious stimulation across all functional imaging studies between 1990 and 2014. **A)** ALE results of noxious stimulation in *healthy* individuals. **B)** ALE results of noxious stimulation in *pain patients*. In both A and B significant ALE clusters ($p < .05$ cluster-level corrected inference using $p < .001$ uncorrected at voxel-level as the cluster-forming threshold) are projected onto an MNI template provided on the Ginger ALE website. The numbers in the figure correspond to the cluster numbering in the corresponding tables (letters were introduced in case multiple foci within one cluster are reported – in Figure 1A: 1a=thalamus, 1b=insula, 1c=primary and secondary somatosensory cortex).

Supplementary Figure 2: Representation of significant ALE maps. A conjunction of all foci from both healthy subjects and patients is shown. The activation likelihood maps are projected onto an MNI template provided on the Ginger ALE website. The numbers in the figure correspond to the cluster numbering in the corresponding table.

Supplementary Figure 3: Results of the subtraction analysis of significant ALE maps. The cluster maps show the contrast where healthy subjects have higher ALE values than patients in green color-coding. The contrast where patients have higher ALE values than healthy subjects is shown in purple color-coding. The activation likelihood maps are projected onto an MNI template provided on the Ginger ALE website. The numbers in the figure correspond to the cluster numbering in the corresponding table.

Supplementary Table 1: List of studies including healthy controls.

| # | First author | Journal | Year | PET or fMRI? | n (m/f) | Mean age (range) | Stimulation method | Part of body | No. of contrasts | No. of foci |

Supplementary Table 2: Number and distribution of brain foci originating from healthy subjects regarding different stimulation methods (note that foci of one study are not included in this table since they only calculated a contrast of painful stimulation across heat and cold stimulation), and stimulated parts of the body.

| Stimulation Method | No. of foci |
|-----------------------|-------------|
| Heat | 965 |
| Distension | 356 |
| Electrical | 314 |
| Pressure | 226 |
| Intranasal trigeminal | 130 |
| Allodynia | 137 |
| Injection | 119 |
| Cold | 86 |
| Incision | 49 |
| Headache | 19 |
| Prick | 18 |
| Laser | 8 |
| Dobutamin | 8 |

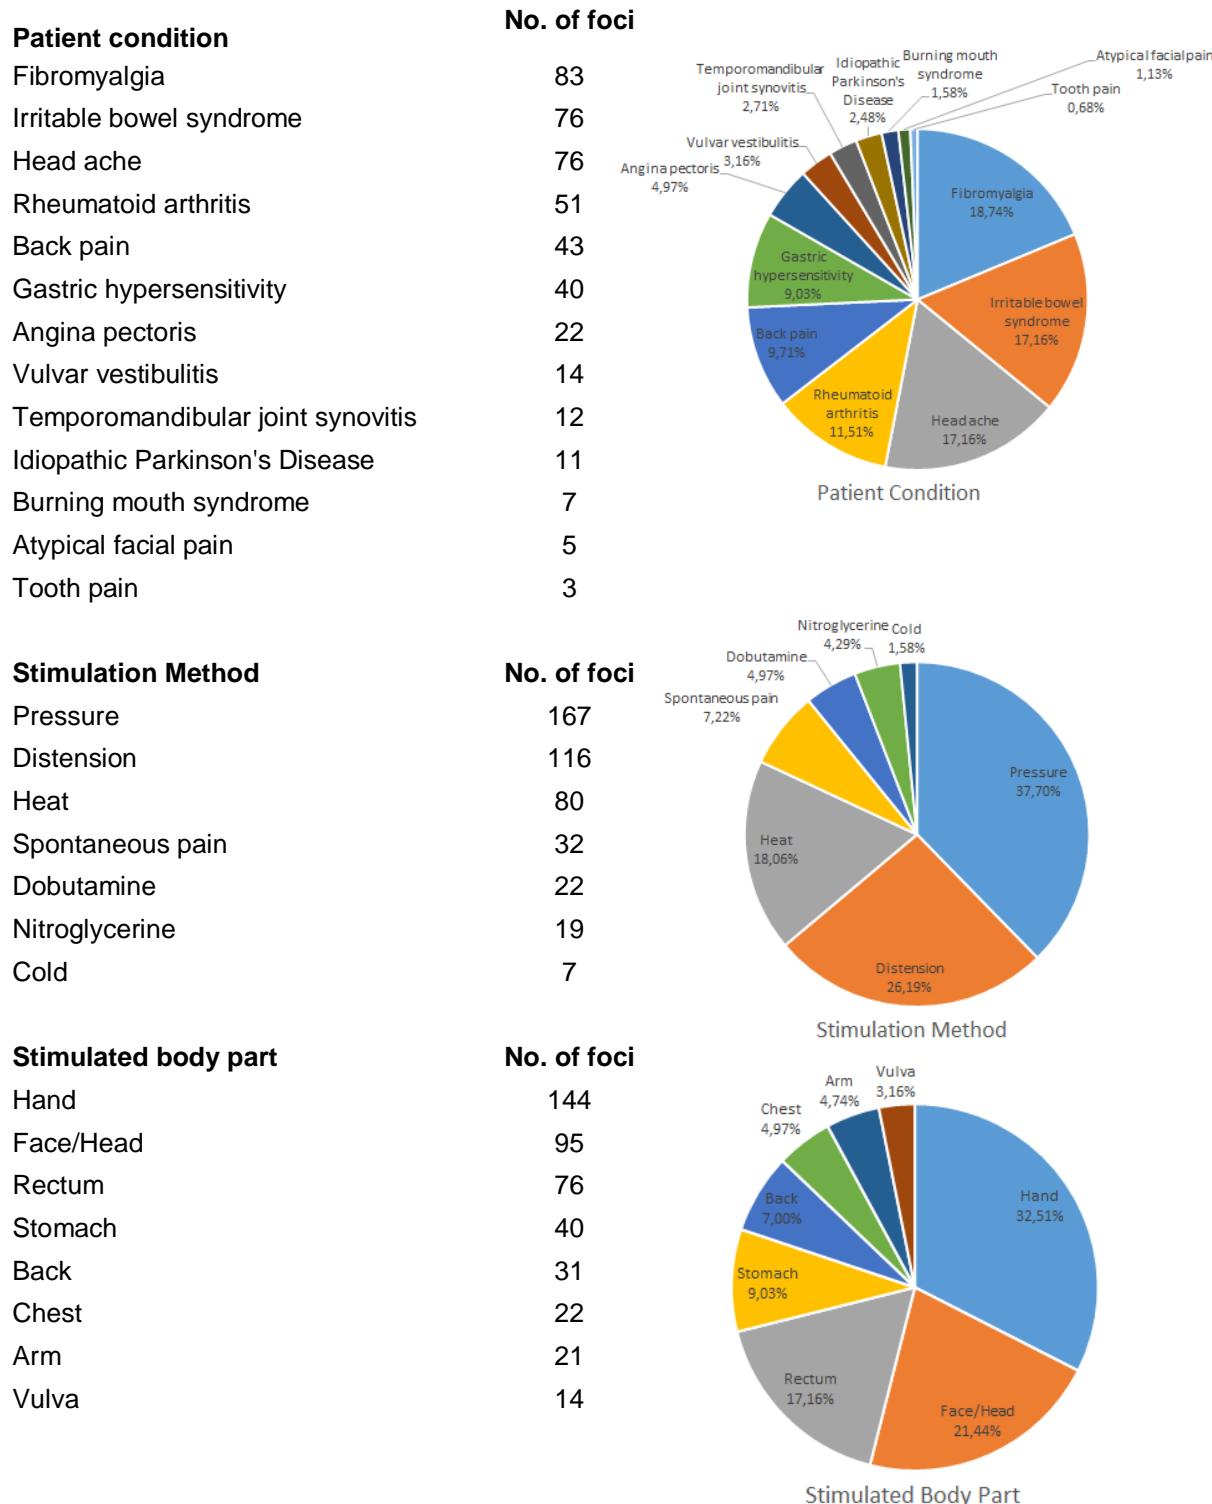

| Stimulated Body Part | No. of foci |
|----------------------|-------------|
| Arm | 862 |
| Hand | 572 |
| Leg | 156 |
| Nostril | 130 |
| Rectum | 152 |
| Stomach | 112 |
| Face/Head | 103 |
| Esophagus | 92 |
| Not mentioned | 81 |
| Tooth | 69 |
| Foot | 60 |
| Chest | 28 |
| Back | 23 |
| Vulva | 2 |

Supplementary Table 3: List of studies including patients

| # | First author | Journal | Year | PET or fMRI? | n patients (m/f); n healthy (m/f) | Mean age (range) | Patient condition | Stimulation method | Part of body | No. of contrasts | No. of foci |
|----|----------------------------|------------------------------------|------|--------------|-----------------------------------|------------------|-----------------------------------|------------------------|--------------|------------------|-------------|
| 1 | Albuquerque, de Leeuw | Pain | 2006 | 1.5T fMRI | 8 (0/8) | 49.1 | Burning mouth syndrome | Heat | Face | 1 | 7 |
| 2 | Baliki, Chialvo | J Neurosci | 2006 | 1.5T fMRI | 11 (5/6) | 50 (29-68) | Back pain | Heat/ Spontaneous pain | Back | 2 | 18 |
| 3 | Bouhassira, Moisset | Neurogastroenterol Motil | 2013 | 1.5T fMRI | 20 (0/20) | 43.9 | IBS | Distension | Rectum | 1 | 18 |
| 4 | Brefel-Courbon, Payoux | Mov Disorders | 2005 | PET | 9 (6/3) | 65 | Idiopathic PD | Cold | Hand | 1 | 4 |
