

Supplementary Figure 1. Representative Western Blots for Nuclear Isolation.

Western blots from Figure 2, panel C, shown in long format, with immunoreactivity shown for both nuclear and cytoplasmic fraction aliquots. Blots probed for nuclear pore complex protein 98 (NUP 98) and β -actin (β -Act), results are representative of 3 independent trials.

Supplementary Figure 2. Full Length Western Blots of SRF and β -actin Expression in DRG. Full-length results of results represented in Figure 4A.
