

Supplementary Digital Content 1. Etravirine resistance and clinical associations. The Tibotec Etravirine Weighted Genotype Score was used to classify etravirine susceptibility. Intermediate and full resistance are classified together under “resistant”. Mean values are presented. Non-parametric Mann-Whitney test was performed for all variables except age (t-test).

	Susceptible (n = 54)	Resistant (n = 38)	<i>p</i> values
Age (years)	40.2	38.6	0.48
CD4 Count (cells/mm ³)	226	228	0.91
Viral load (copies/ml)	238,121	943,859	0.01*
Time since diagnosis (in months)	53.65	63.87	0.17
Time since antiretroviral initiation (in months)	28.50	35.87	0.03*
Adherence (% pills taken correctly during the previous month)	91.67	91.92	0.67
