Supplementary Figure S1. Evolution of lipid fraction values during the study follow-up period.

Basal plasma lipid values (mg/dl) are represented in the first column. Abnormal lipid values (mg/dl) are represented in the second column with the respective % of individuals who suffered an abnormality within the first six months and one year of ART exposure.

T-Chol. Total Cholesterol; LDL-C. low-density lipoprotein cholesterol; HDL-C. high-density lipoprotein cholesterol; TG. triglycerides; PI. protease inhibitor; NNRTI. non-nucleoside reverse-transcriptase inhibitor.

Supplementary Table S2. Cochran-Maentel-Haenszel (CMH) test-based univariate analysis stratified first line antiretroviral treatment.
