

Supplemental Digital Content 1 -Figure 1. Flow diagram of participant inclusion for this study. A total of seventy-eight participants were studied. Fifty-two of the subjects were HIV infected (HIV+) while and twenty-six were HIV-. Within the HIV+ group twenty-six were HIV+ but naïve to medications (HIV+/HAART-) while twenty-six were HIV+ and were on stable therapy (HIV+/HAART+). Twelve of the HIV+/ HAART- subjects were longitudinally followed just prior to starting HAART and ~6 months after starting anti-retrovirals (ARVs).
