

Table S1. Changes in stigma, HIV-related knowledge and social support

	Control arm			Intervention arm			Difference of differences	95% CI
	Pre-intervention mean (SD)	Post-intervention mean	Diff	Pre-intervention mean (SD)	Post-intervention mean	Diff		
Stigma*	6.6 (3.5)	6.4	-0.1	6.9 (3.4)	5.1	-1.8	-1.6	-2.4 to -0.8
HIV knowledge†	14.8 (2.0)	14.8	0.1	14.9 (2.3)	15.3	0.3	0.2	-0.4 to 0.8
Social support ‡	4.7 (0.4)	4.7	0.0	4.7 (0.4)	4.8	0.1	0.1	0.00 to 0.25

* Perceived stigma in the community, 17-point scale with higher score indicating greater perceived stigma

† KQ-18 knowledge scale, 18-point scale with higher score indicating greater HIV-related knowledge

‡ Duke-UNC social support scale, 5-point scale with higher score indicating greater perceived social support
