

## ACTIVE SCIENCE EXAMPLE INTERFACE

## EXAMPLE CURRICULUM MODULE PRE-ASSESSMENT

Get Buddy to the Finish Line!

Why are rocks important?

Scientists can learn the age of rocks

Scientists can learn about Earth's past from rocks

All of the above

Get Buddy to the Finish Line!

\_\_\_\_\_ is a type of rock that is formed when layers of sand, mud and pebbles are pressed together over time.

Igneous

Metamorphic

Sedimentary

Get Buddy to the Finish Line!

\_\_\_\_\_ is a type of rock that is formed when magma cools into solid form.

Igenous

Get Buddy to the Finish Line!

What is this image an example of?

Weathering

Erosion

Decomposition

Get Buddy to the Finish Line!

\_\_\_\_\_ is the movement of sediment (pieces of rock) from one place to another by wind, water or gravity.

Get Buddy to the Finish Line!

What effect does weathering and erosion have on landforms?

Weathering and erosion can transform landforms into different ones

Weathering and erosion can make landforms grow

Weathering and Erosion do not affect landforms
