

# How do patient and graft survival compare among kidney after liver transplant vs kidney transplant alone recipients?

## COHORT AND METHODS

UNOS database  
1988-2015

Matched pair analysis:  
Kidney after liver  
transplant vs kidney  
transplant alone recipients

Pairs stratified by  
KDPI subgroups  
N=745

## RESULTS

Patient  
survival

Graft  
survival

KDPI  
<20

Reference  
p=0.03  
1.14 y longer

No difference  
p=0.2

KDPI  
21-85

Reference  
p<0.001  
1.25 y longer

Reference  
p<0.01  
0.59 y longer

KDPI  
>85

Reference  
p=0.02  
1.54 y longer

No difference  
p=0.06
