Figures

Figure S1. A. Hematoxylin and eosin staining of normal lung tissue, after ischemia, and after reperfusion (IRI) showing minimal architecture changes (upper panels, 40x) with increased patchy infiltration of inflammatory cells after ischemia and reperfusion (lower panels, 100x). B. Inflammation quantification showing increased infiltration of inflammatory cells in the Ischemia and Reperfusion groups compared to the Control group ($p=0.08$ and 0.01 , respectively).

Figure S2. (A) In-situ hybridization assay of miR-17 & miR-548 in human lung tissues with no miR probe (B) Positive control: In-situ hybridization assay of miR-17 & miR-548 in colorectal adenocarcinoma cells (10 x). (C) Quantification of miR expression positivity in the lung tissue
