

Figure S3. RIDR-PI-103 decreases cell viability in dose dependent manner in A375 and WM115 TDR cells. (A) A375 TDR, (B) WM115 TDR and (C) WM983B TDR cells were plated and treated with vehicle or RIDR-PI-103 (1 μ M, 2.5 μ M or 5 μ M) for 48 hours for trypan blue exclusion assay. Cells were trypsinized and counts of dead cells along with total number of cells were obtained using hemocytometer. Cell viability was assed using formula stated in materials and methods. Error bars: SEM. * P <0.05, ** P <0.01, *** P <0.001 vs. DMSO (one-way ANOVA followed by Tukey's test for post hoc analysis).
