

Supplementary Table 1. Characteristics of HCC in abstinent and non-abstinent patients.

Characteristic	Abstinent (n= 52)	Non-abstinent (n= 52)	<i>p</i>
Single-nodule, n (%)	37 (71.1)	27 (51.9)	0.069
Number of nodules	1 (1-2)	1.5 (1-3)	0.016
Diameter of larger nodule (mm)	25 (19.7-30.0)	29 (20.0-35.0)	0.24
Total diameter (mm)	25.5 (20-35)	37.0 (22.7-55.5)	0.019
Macrovascular invasion, n (%)	7 (13.4)	5 (9.6)	0.80
AFP (ng/mL)	6.8 (3-19)	5.4 (3-14)	0.58
Milan criteria present, n (%)	41 (78.8)	31 (59.6)	0.034

Quantitative variables are expressed as median (Q1-Q3) values. AFP, alpha-fetoprotein.

Supplementary Figure 1. Instant hazard estimate of HCC during follow-up in abstinent patients with compensated and decompensated disease.
