NR = not reported due to fewer than 10 deaths in given category.

1. All rates presented met standards of reliability (numerator >16 deaths), which corresponded to SEs that were below 25% of the rate under the assumption of a Poisson distribution.
2. Compared to the prior column/time period.
3. Race/ethnicity categories are single-race categories. Hispanic origin includes all races. AIAN = American Indian Alaska Native.
4. Six rural-urban categories were collapsed to 3 to ensure reliable estimates: Large urban (large central, large fringe metropolitan), medium/small urban (medium, small metropolitan), or rural (micropolitan, noncore areas).
