

Supplemental Appendix

The POSITIONED Study: Prone Positioning in Non-Ventilated COVID-19 Patients - A Retrospective Analysis

Table of Contents

Figure S1.	2
Figure S2.	3

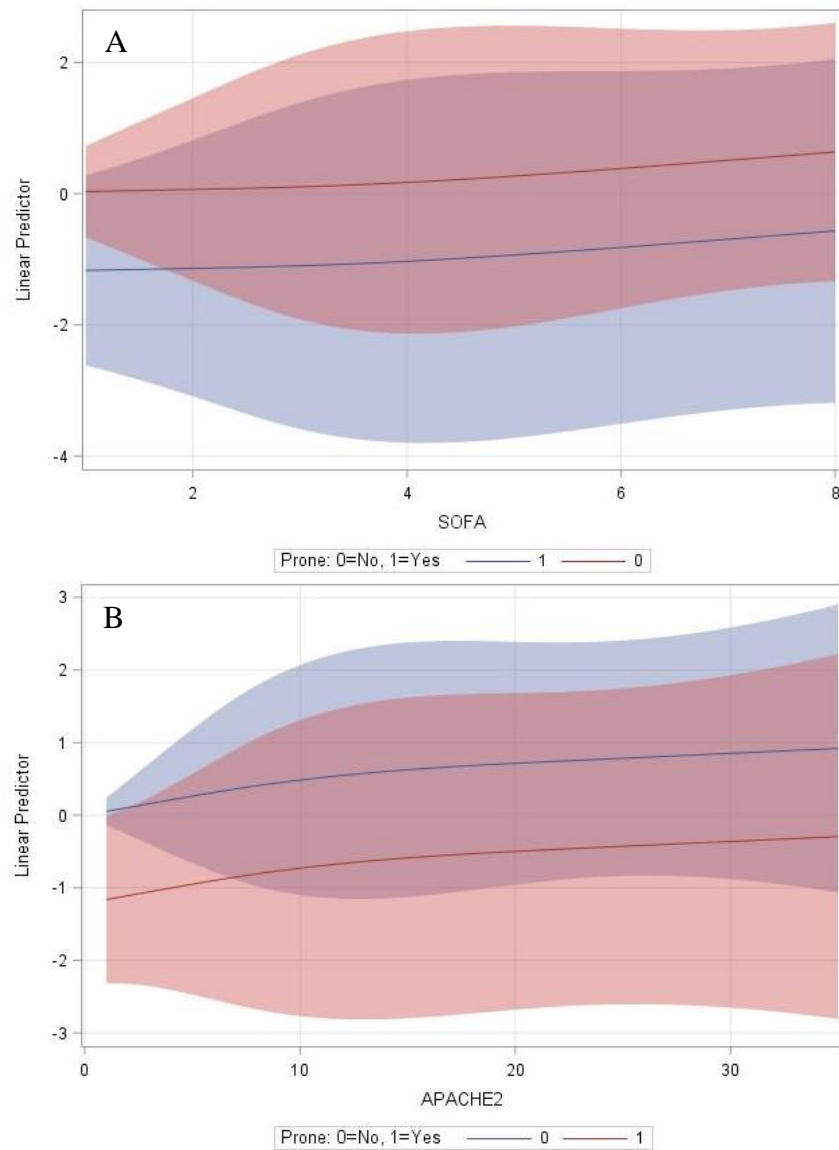

Figure S1. Effect of SOFA score (A) and APACHE-II score (B) on risk of intubation stratified by prone status ($p = 0.762$ and 0.626 , respectively). Shaded areas represent 95% confidence intervals. Estimates are on the model scale (i.e., log-hazard).

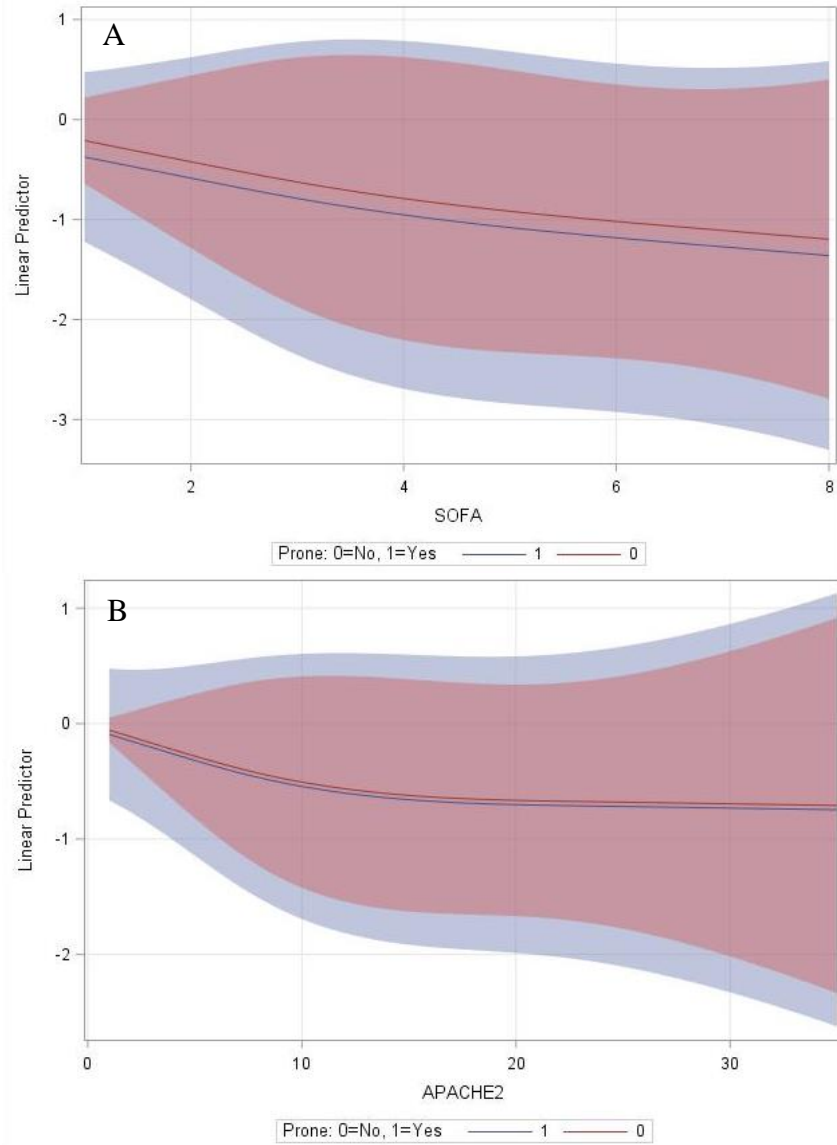

Figure S2. Effect of SOFA score (A) and APACHE-II score (B) on risk of hospital discharge stratified by prone status ($p = 0.762$ and 0.626 , respectively). Shaded areas represent 95% confidence intervals. Estimates are on the model scale (i.e., log-hazard).
