

Supplementary Table 2: Logistic regression of in-hospital mortality and minimum serum albumin levels within one day of enrollment controlling for covariates

Supplementary Table 2 In-Hospital Mortality (N=993)		Odds Ratio		95% Confidence Interval	P Value
Variable			Lower	Upper	
Age (per year)		1.007	0.995	1.019	0.277
Male sex		1.097	0.793	1.518	0.577
APACHE II (per 1 point increase)		1.041	1.019	1.065	<0.001
Sepsis		1.704	1.174	2.501	0.006
Chronic Liver Disease		1.728	1.159	2.565	0.007
Vasopressor Use		0.894	0.633	1.259	0.523
Baseline eGFR (per mL/min/ 1.73m ²)		0.993	0.988	0.998	0.006
Positive 72 hr. Fluid Balance		1.766	1.143	2.800	0.013
Serum Albumin (per 1g/dL decrease)		1.563	1.120	2.049	0.001

OR per 1g/dL decrease in serum albumin
