

Table 3 (supplement):

Individual components of the composite endpoint and interaction between subgroups with biologic plausible effects on the outcome and treatment. The only interaction of significance was for the outcome of death in those undergoing a coronary procedure.

	Death			Renal Replacement Therapy			Chronic Kidney Disease		
	Interaction p value	Odds Ratio (OR)	OR p value	Interaction p value	Odds Ratio (OR)	OR p value	Interaction p value	Odds Ratio (OR)	OR p value
Age	0.95			0.60			0.06		
<65		0.19	0.44		0.43	0.47		2.16	0.26
>65		1.96	0.16		0.87	0.82		0.48	0.80
Diabetes	0.51			0.03			0.89		
no		1.42	0.55		4.54	0.17		0.74	0.56
yes		2.45	0.11		0.14	0.07		0.67	0.41
CHF	0.78			0.38			0.07		
no		1.45	0.60		0.28	0.25		1.15	0.75
yes		1.84	0.25		0.89	0.87		0.28	0.04
Procedure	0.03			0.31			0.84		
Coronary		3.50	0.02		1.00	0.99		0.68	0.34
Peripheral		0.46	0.32		0.26	0.25		0.82	0.79
