Dialysate Sodium Concentration and the Association with Interdialytic Weight Gain, Hospitalization, and Mortality

Manfred Hecking, Angelo Karaboyas, Rajiv Saran, Ananda Sen, Masaaki Inaba, Hugh Rayner, Walter Hörl, Ronald Pisoni, Bruce Robinson, Gere Sunder-Plassmann, Friedrich Port

Legends for Supplementary Figures

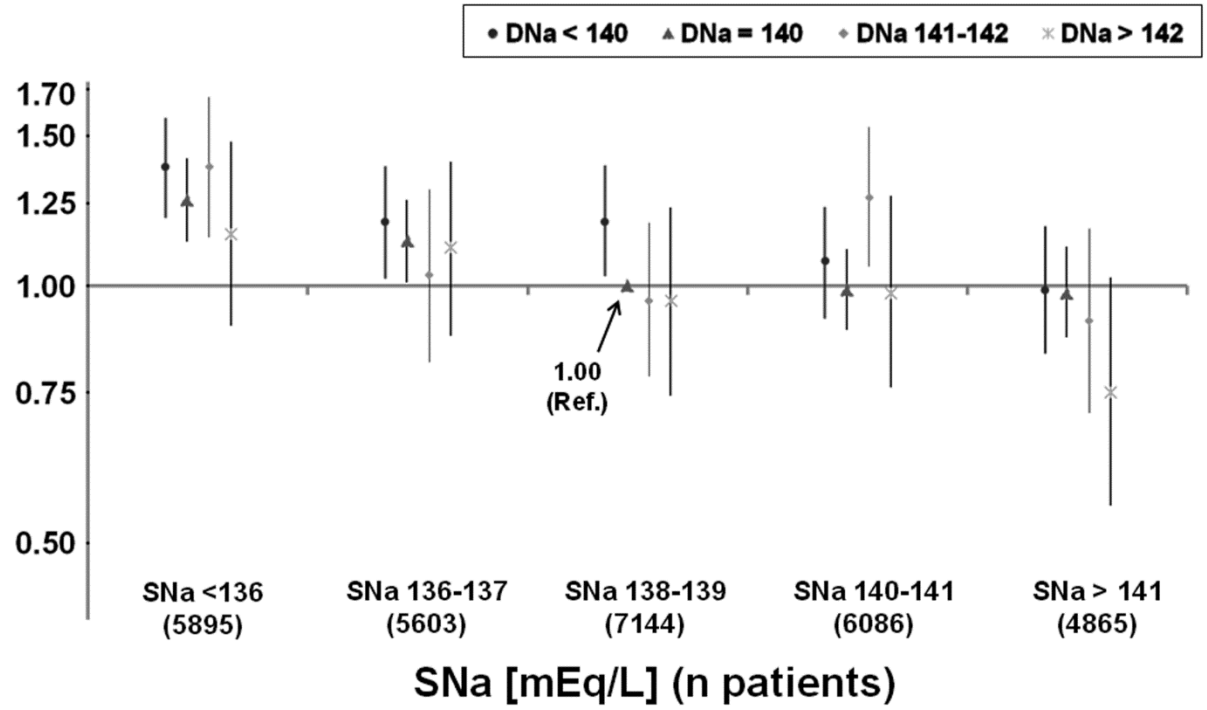

Supplementary Figure 1: Adjusted all-cause mortality risk by dialysate sodium (DNa) and predialysis serum sodium (SNa).

Cox model, as in Figure 3, but additionally adjusted for interdialytic weight gain (IDWG) and predialysis systolic blood pressure (SBP).

Supplementary Figure 2: Adjusted hospitalization risk by dialysate sodium (DNa) and predialysis serum sodium (SNa).

Cox model, as in Figure 4, but additionally adjusted for interdialytic weight gain (IDWG) and predialysis systolic blood pressure (SBP).

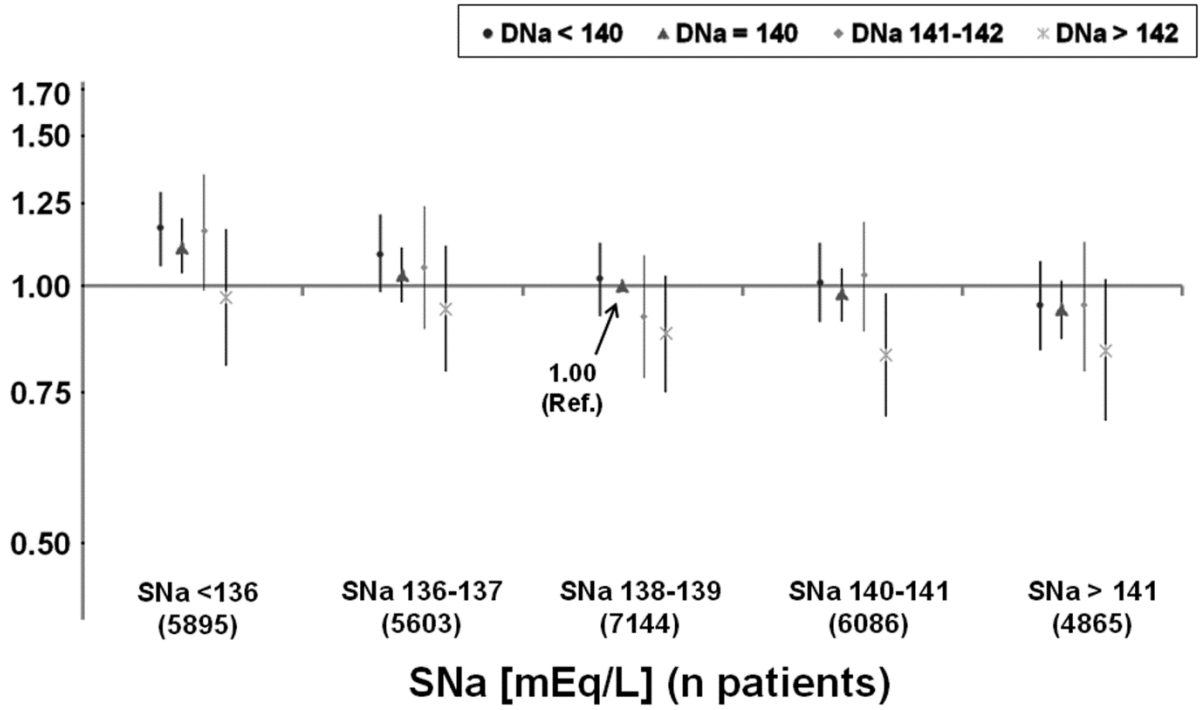

All-cause mortality
Hazard Ratio (95% CI)

Suppl. Fig. 1

Model additionally adjusted for IDWG and predialysis SBP

Hospitalizations*
Hazard Ratio (95% CI)

Suppl. Fig. 2

Model additionally adjusted for IDWG and predialysis SBP
