Abbreviations: HD, hemodialysis; ESRD, end stage renal disease; GN, glomerulonephritis

Table S4. Censoring events over study follow-up by vascular access type at time of initiation of home hemodialysis in unmatched (n=2481) and propensity score-matched (n =1052) cohorts

Reason for Censoring	Unmatched cohort (n=2481)			Propensity score matched cohort (n=1052)	
	CVC	AV Access	Missing	CVC	AV Access
	n=579	n=1794	n=108	n=526	n=526
Discharge to non-affiliated dialysis facility	8 (1)	40 (2)	5 (5)	7 (1)	13 (2)
Discontinued dialysis	5 (1)	4 (<1)	0	5 (1)	4 (1)
Regained renal function	1 (<1)	2 (<1)	1 (1)	1 (<1)	2 (<1)
Transplant	49 (8)	139 (8)	7 (6)	46 (9)	42 (8)
Transfer to alternate modality	180 (31)	483 (27)	20 (19)	165 (31)	156 (30)
End of Follow-up/Other	258 (45)	1030 (57)	62 (57)	234 (44)	267 (51)

Abbreviations: CVC, central venous catheter; AV arteriovenous

Table S5: Hazard ratios for transfer to in-center hemodialysis for central venous catheter use versus arteriovenous access use in incident home hemodialysis patients (n =2481), stratified by tertiles of dialysis facility home hemodialysis central venous catheter experience

Model	Dialysis facility home HD central venous catheter experience ^a Hazard ratio (95% confidence interval) ^b		
	0-3	4-11	12-46
Matched cohort ^c			
Propensity score-matched	1.61 (0.97, 2.65)	1.19 (0.73, 1.96)	1.32 (0.76, 2.32)
Unmatched cohort			
Unadjusted	3.03 (1.91, 4.82)	1.66 (1.10, 2.52)	1.17 (0.75, 1.83)
Minimally adjusted ^d	3.09 (1.92, 4.99)	1.66 (1.09, 2.51)	1.19 (0.76, 1.89)
Fully adjusted ^e	2.27 (1.37, 3.75)	1.29 (0.82, 2.02)	1.19 (0.73, 1.96)

Abbreviations: HD, hemodialysis

^a Defined by number of incident 91-day patient-periods of central venous catheter use by HHD patients

^b Reference group HHD patients with arteriovenous access; hazard ratios are subdistribution hazard ratios from competing risks regression

^c Propensity score matched cohort included 1052 patients (CVC, n = 526; AV access, n = 526)

^d Data adjusted for age, sex, diabetes, and race and/or ethnicity

^e Data adjusted for demographic characteristics above, plus duration of dialysis treatment prior to start of home HD, dialysis facility home HD experience, body mass index, serum albumin, serum creatinine, and blood hemoglobin.

Table S6: Characteristics of unmatched ($n = 114,068$) and propensity score-matched ($n = 44,862$) conventional in-center hemodialysis study cohorts stratified by initial vascular access type at the time of initiation of dialysis

Characteristics	Unmatched Cohort		Propensity Score Matched Cohort	
	CVC (n=91304)	AV Access (n=22764)	CVC (n=22431)	AV Access (n=22431)

Table S8: Sensitivity analysis: hazard ratios for all-cause mortality, hospitalization, and transfer to in-center HD for central venous catheter use versus arteriovenous access use at the time of start of home HD in incident home HD patients (n = 2481)

Model	Hazard ratio (95% confidence interval) ^a		
	All-cause mortality	Hospitalization	Transfer to in-center HD
Unmatched cohort			
Unadjusted	2.43 (1.80, 3.29)	1.63 (1.44, 1.85)	1.16 (0.92, 1.45)
Minimally adjusted ^b	2.25 (1.67, 3.05)	1.28 (1.13, 1.45)	1.17 (0.93, 1.47)
Fully adjusted ^c	1.67 (1.21, 2.31)	1.40 (1.22, 1.61)	1.09 (0.85, 1.39)

All models adjusted for calendar 91-day period. Abbreviations: HD, hemodialysis

^a Reference group home HD patients with arteriovenous access; HRs are subdistribution hazard ratios

^b Data adjusted for age, sex, diabetes, and race and/or ethnicity.

^c Data adjusted for demographic characteristics above, plus duration of dialysis treatment prior to start of home HD, dialysis facility home HD experience, body mass index, serum albumin, serum creatinine, and blood hemoglobin.

SUPPLEMENTAL FIGURES

Figure S1. Construction of unmatched incident home hemodialysis (HD) study cohort. Abbreviations: HD, hemodialysis

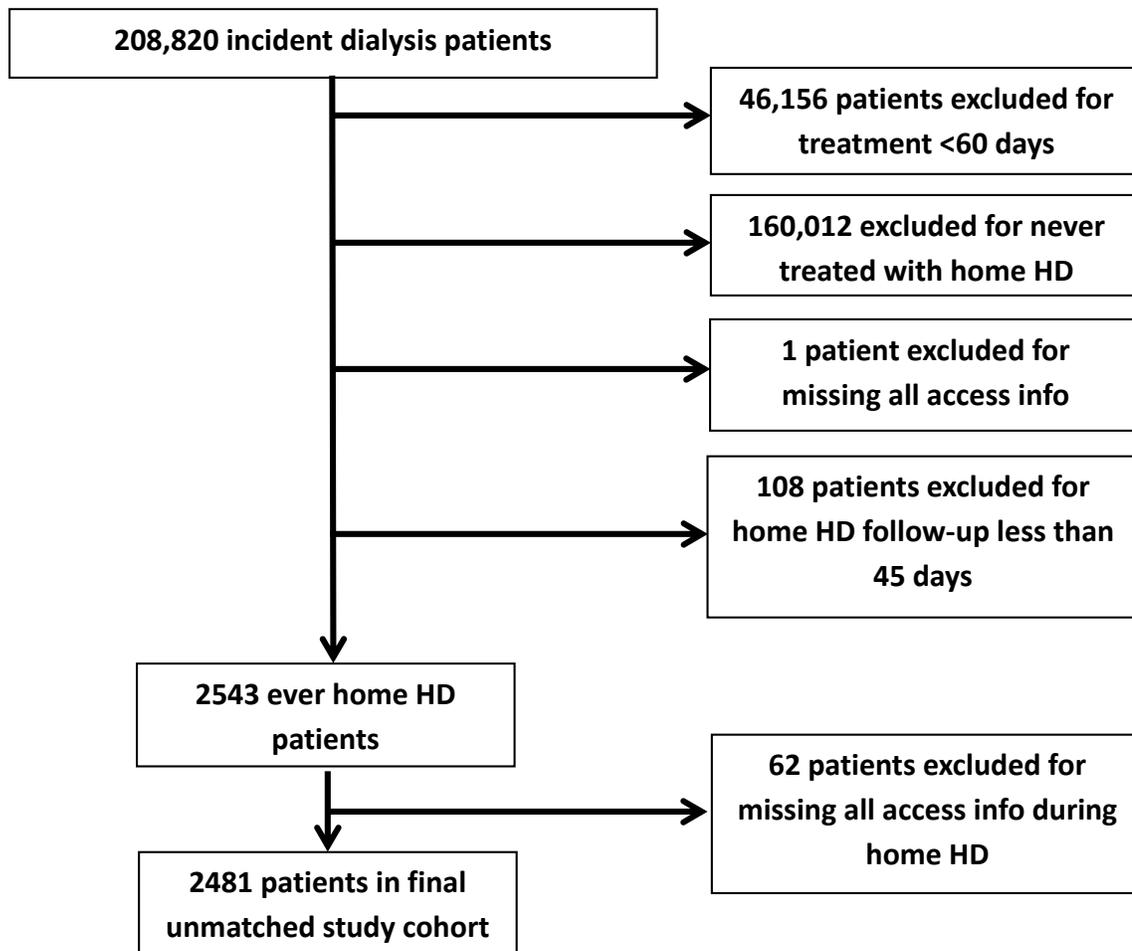

Figure S2. Construction of propensity score-matched conventional in-center HD cohort. Abbreviations: HD, hemodialysis; CVC, central venous catheter; AV, arteriovenous

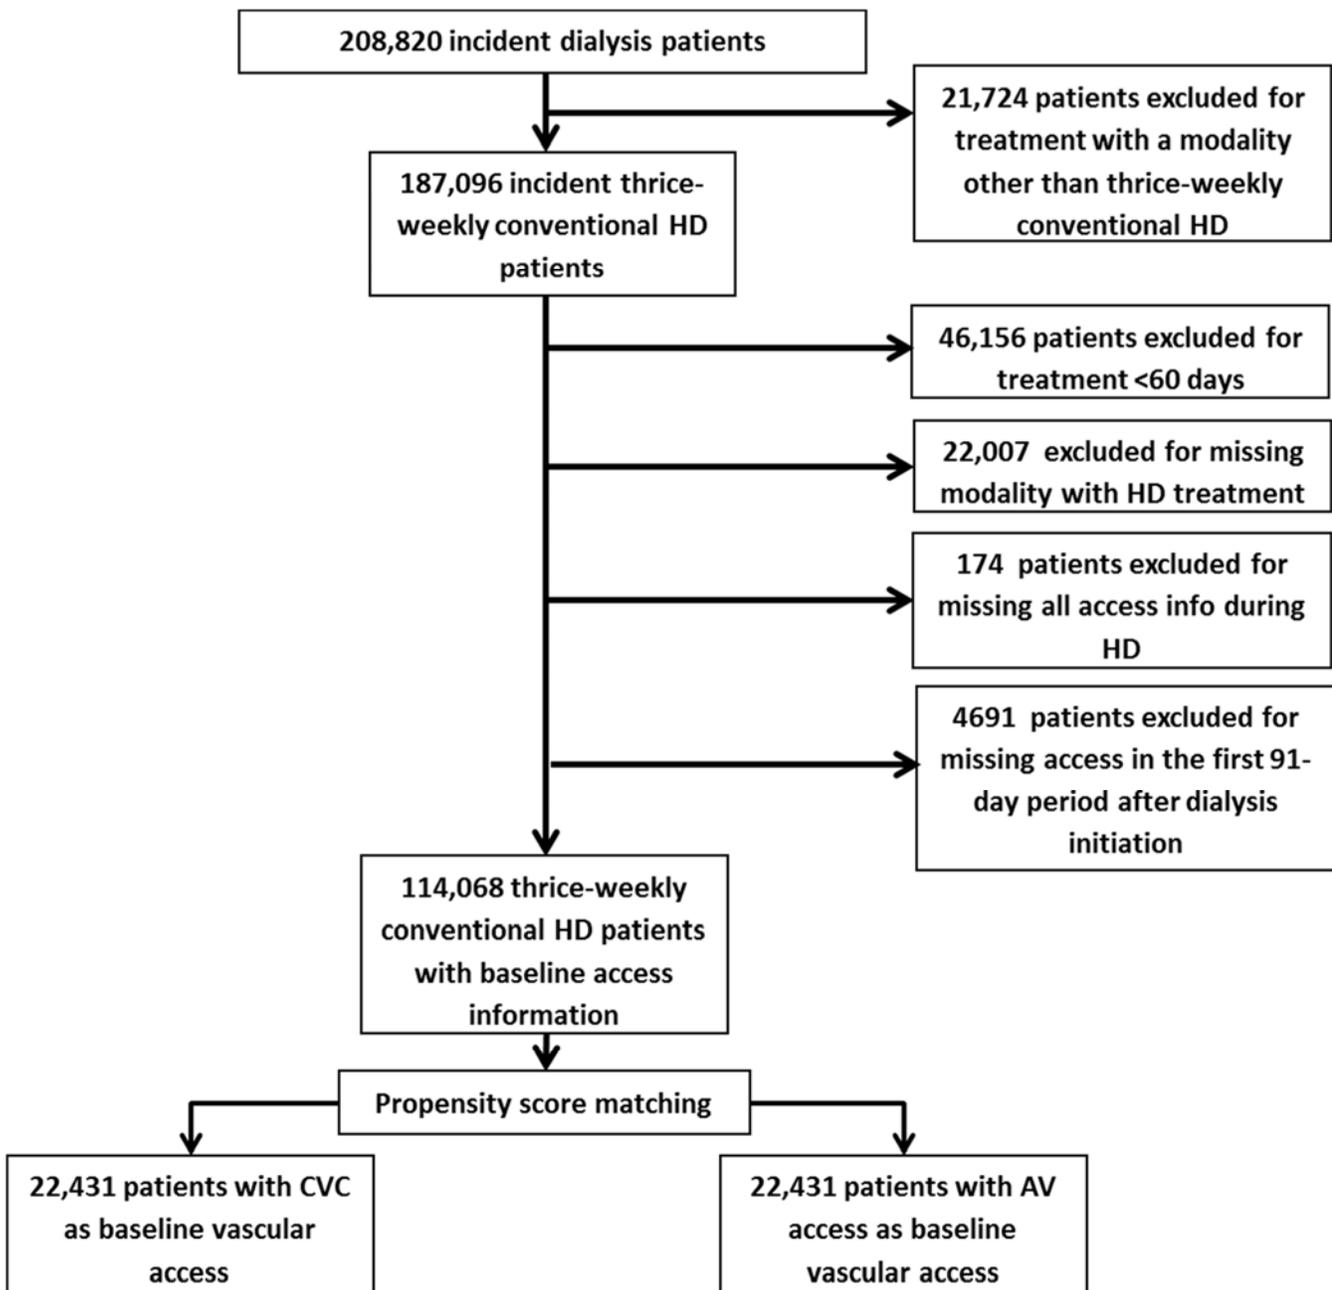

Figure S3. Association of vascular access type with adjusted risk of transfer to in-center hemodialysis in unmatched cohort of patients undergoing home hemodialysis, stratified by tertiles of dialysis facility central venous catheter experience. Reference group: arteriovenous access. Hazard ratios for unadjusted, minimally adjusted and fully adjusted models are sub-distribution hazard ratios. Abbreviations: HD, hemodialysis; CVC, central venous catheter
