

**Supplemental Table 1.** Unadjusted and adjusted associations between baseline target weight misses considered proportionate to body weight and all-cause and cardiovascular mortality.<sup>a</sup>

	All-cause mortality		Cardiovascular mortality	
	Unadjusted HR (95% CI)	Adjusted HR <sup>b</sup> (95% CI)	Unadjusted HR (95% CI)	Adjusted HR <sup>b</sup> (95% CI)
>2% body weight <u>above</u> EDW in <30% ses	1.00 (ref.)	1.00 (ref.)	1.00 (ref.)	1.00 (ref.)
>2% body weight <u>above</u> EDW in ≥30% ses	1.23 (1.13-1.35)	1.24 (1.13-1.36)	1.24 (1.08-1.43)	1.22 (1.05-1.41)
>2% body weight <u>below</u> EDW in <30% ses	1.00 (ref.)	1.00 (ref.)	1.00 (ref.)	1.00 (ref.)
>2% body weight <u>below</u> EDW in ≥30% ses	1.26 (1.12-1.42)	1.17 (1.04-1.33)	1.51 (1.27-1.81)	1.49 (1.23-1.81)

<sup>a</sup> The 2% cut-point was selected because the distribution of the differences between target weight and post-dialysis weight (above and below) were asymmetrically distributed. We thus considered above target weight miss and below target weight miss in quartiles and identified the 75<sup>th</sup> percentile (2% of body weight) as the cut-point.

<sup>b</sup> Multivariable models contained exposure terms for both above and below weight and were adjusted for age, sex, race (black, non-black), coronary artery disease, heart failure, diabetes, vascular access type (fistula, graft, catheter), albumin ( $\leq 2.9$ ,  $3-3.9$ ,  $\geq 4.0$  g/dL), phosphorus (mg/dL), hemoglobin (g/dL), equilibrated Kt/V, dialytic vintage ( $\leq 1.0$ ,  $1.1-1.9$ ,  $2.0-3.9$ ,  $\geq 4.0$  years), prescribed treatment time (minutes), interdialytic weight gain (kilograms), pre-dialysis systolic blood pressure ( $\leq 130$ ,  $131-150$ ,  $\geq 151$  mmHg), and missed dialysis treatments (0, 1, 2,  $\geq 3$ ). Since the exposures were indexed to post-dialysis weight, post-dialysis weight was excluded from the multivariable model.

**Supplemental Table 2.** Adjusted associations between baseline target weight misses considered proportionate to body weight and all-cause and cardiovascular mortality using varied thresholds to distinguish missed vs. achieved target weight.

	All-cause mortality Adjusted HR <sup>a</sup> (95% CI)	Cardiovascular mortality Adjusted HR <sup>a</sup> (95% CI)
>1% body weight <u>above</u> EDW in <30% ses	1.00 (ref.)	1.00 (ref.)
>1% body weight <u>above</u> EDW in ≥30% ses	1.13 (1.04-1.23)	1.17 (1.02-1.33)
>1% body weight <u>below</u> EDW in <30% ses	1.00 (ref.)	1.00 (ref.)
>1% body weight <u>below</u> EDW in ≥30% ses	1.17 (1.06-1.29)	1.43 (1.22-1.67)
>1.5% body weight <u>above</u> EDW in <30% ses	1.00 (ref.)	1.00 (ref.)
>1.5% body weight <u>above</u> EDW in ≥30% ses	1.24 (1.14-1.35)	1.27 (1.11-1.46)
>1.5% body weight <u>below</u> EDW in <30% ses	1.00 (ref.)	1.00 (ref.)
>1.5% body weight <u>below</u> EDW in ≥30% ses	1.15 (1.02-1.28)	1.42 (1.19-1.69)
