

Supplementary Figure 1: Global age-standardized mortality rate of NTUIs among children and adolescents aged 5 – 24 years, 1990 – 2019. Group A represents the ASMR and number of deaths caused by NTUIs, while group B represents the rate and number for NTUIs excluded the death caused by “exposure to forces of nature” and “other unintentional injuries.” ASMR: Age-standardized mortality rate; NTUIs: Non-transport unintentional injuries.

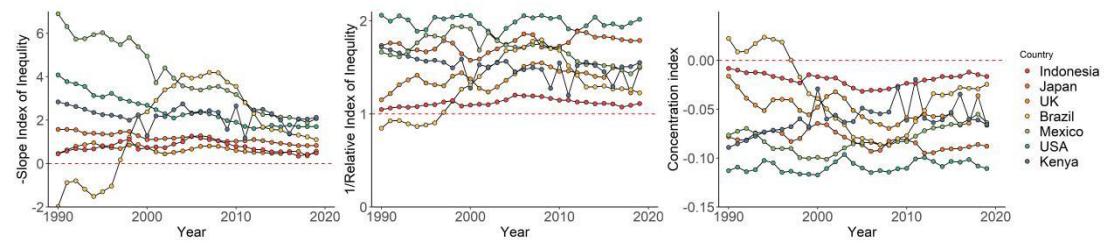

Supplementary Figure 2: Global gender-specific age-standardized mortality rate of NTUIs among children and adolescents aged 5 – 24 years, 1990 – 2019. Group A represents the ASMR and number of deaths caused by NTUIs among male children and adolescents, while group B represents the rate and number for NTUIs excluded the death caused by “exposure to forces of nature” and “other unintentional injuries” among male children and adolescents. Group C represents the ASMR and number of deaths caused by NTUIs among female children and adolescents, while group D

represents the rate and number for NTUIs excluded the death caused by “exposure to forces of nature” and “other unintentional injuries” among female children and adolescents. ASMR: Age-standardized mortality rate; NTUIs: Non-transport unintentional injuries.

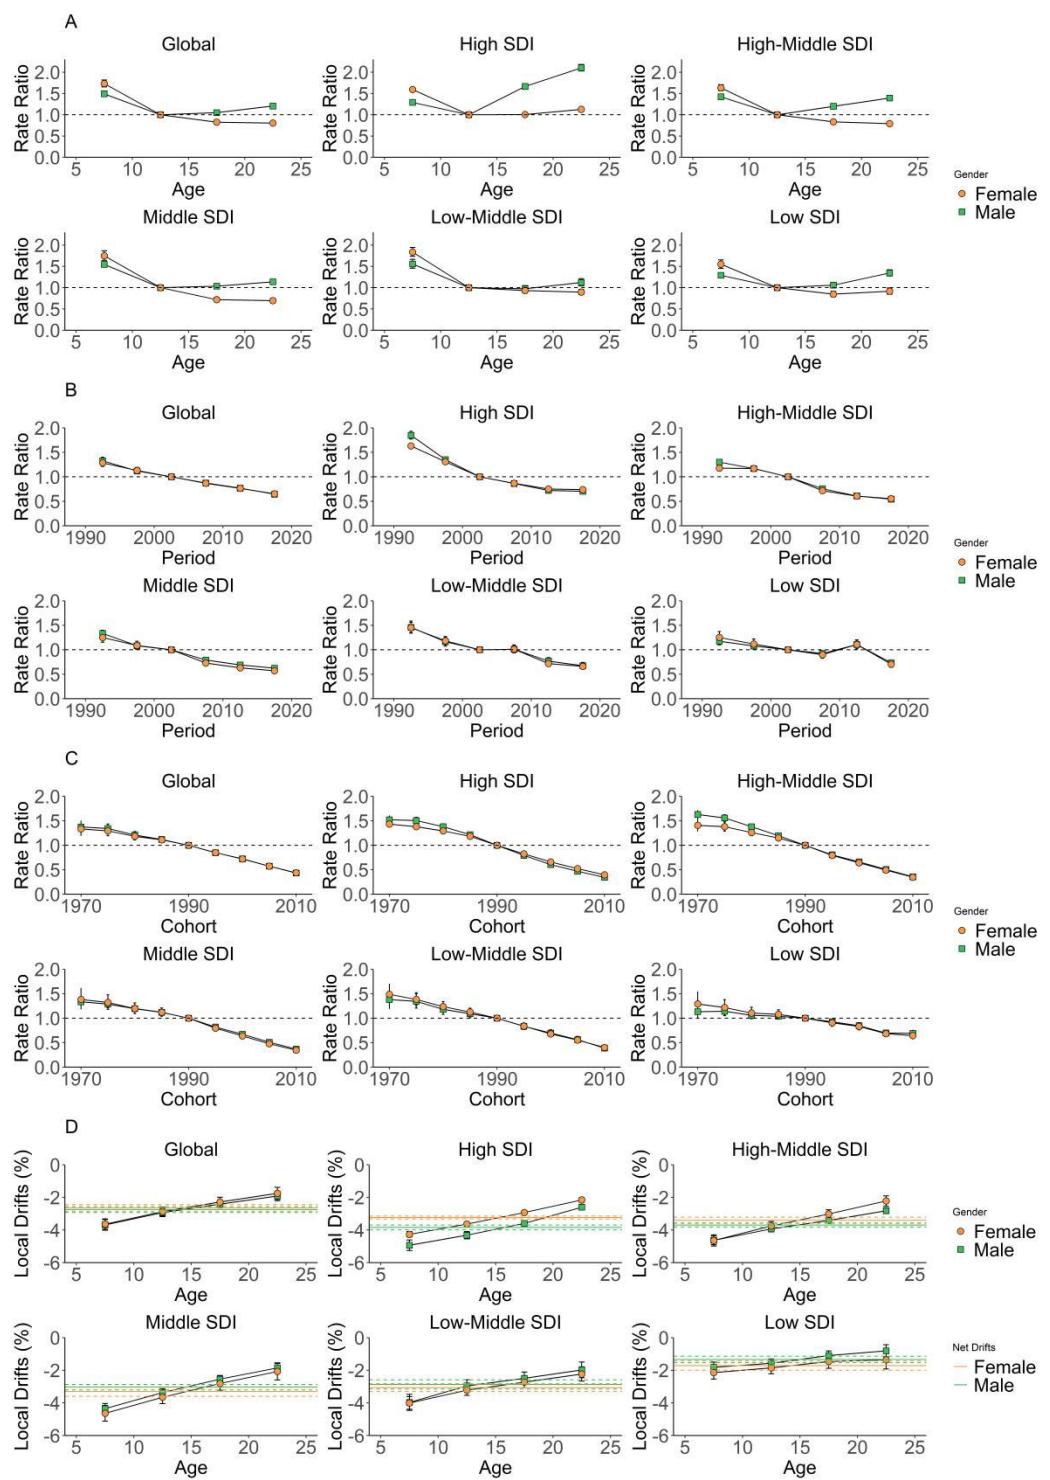

Supplementary Figure 3: Global concentration curve between death number of NTUIs and number of people in different SDI level, 1990 – 2019. Death caused by “exposure to forces of nature” and “other unintentional injuries” was excluded for

analysis. NTUIs: Non-transport unintentional injuries; SDI: Socio-demographic index.

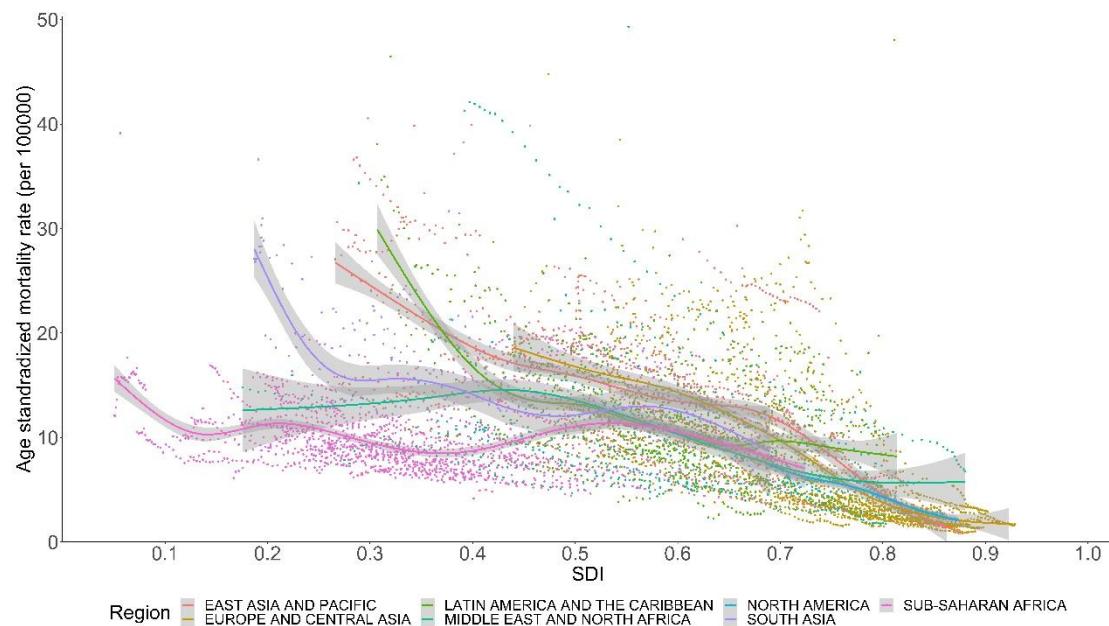

Supplementary Figure 4: The trends of slope index of inequality, relative index of inequality, and concentration index for seven countries, 1990 – 2019. Death caused by “exposure to forces of nature” and “other unintentional injuries” was excluded for analysis.

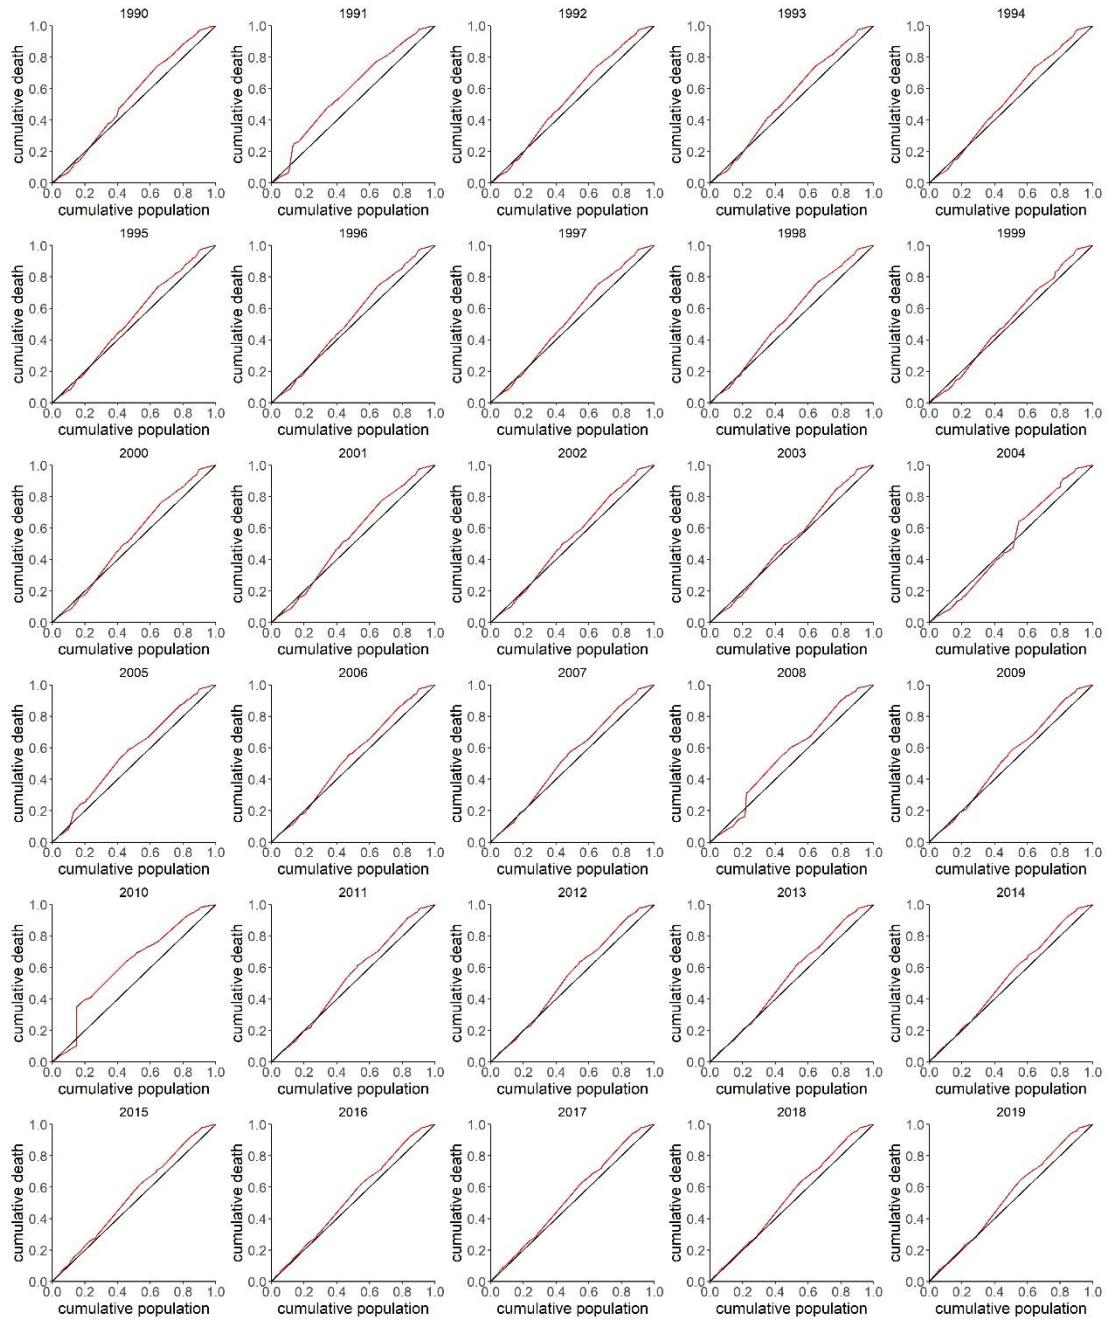

Supplementary Figure 5: Trends in NTUIs mortality by SDI quintiles, 1990 – 2019. (A) Age rate ratio of NTUIs in 1990 cohort by SDI levels, adjusted for period effect. (B) Mortality rate ratio of NTUIs by SDI levels and period from 1990 to 2020. (C) Mortality rate ratio of NTUIs by SDI levels and birth cohort from 1970 to 2010. (D) Age-specific annual percent change of NTUIs mortality rate by SDI levels, 1990 –

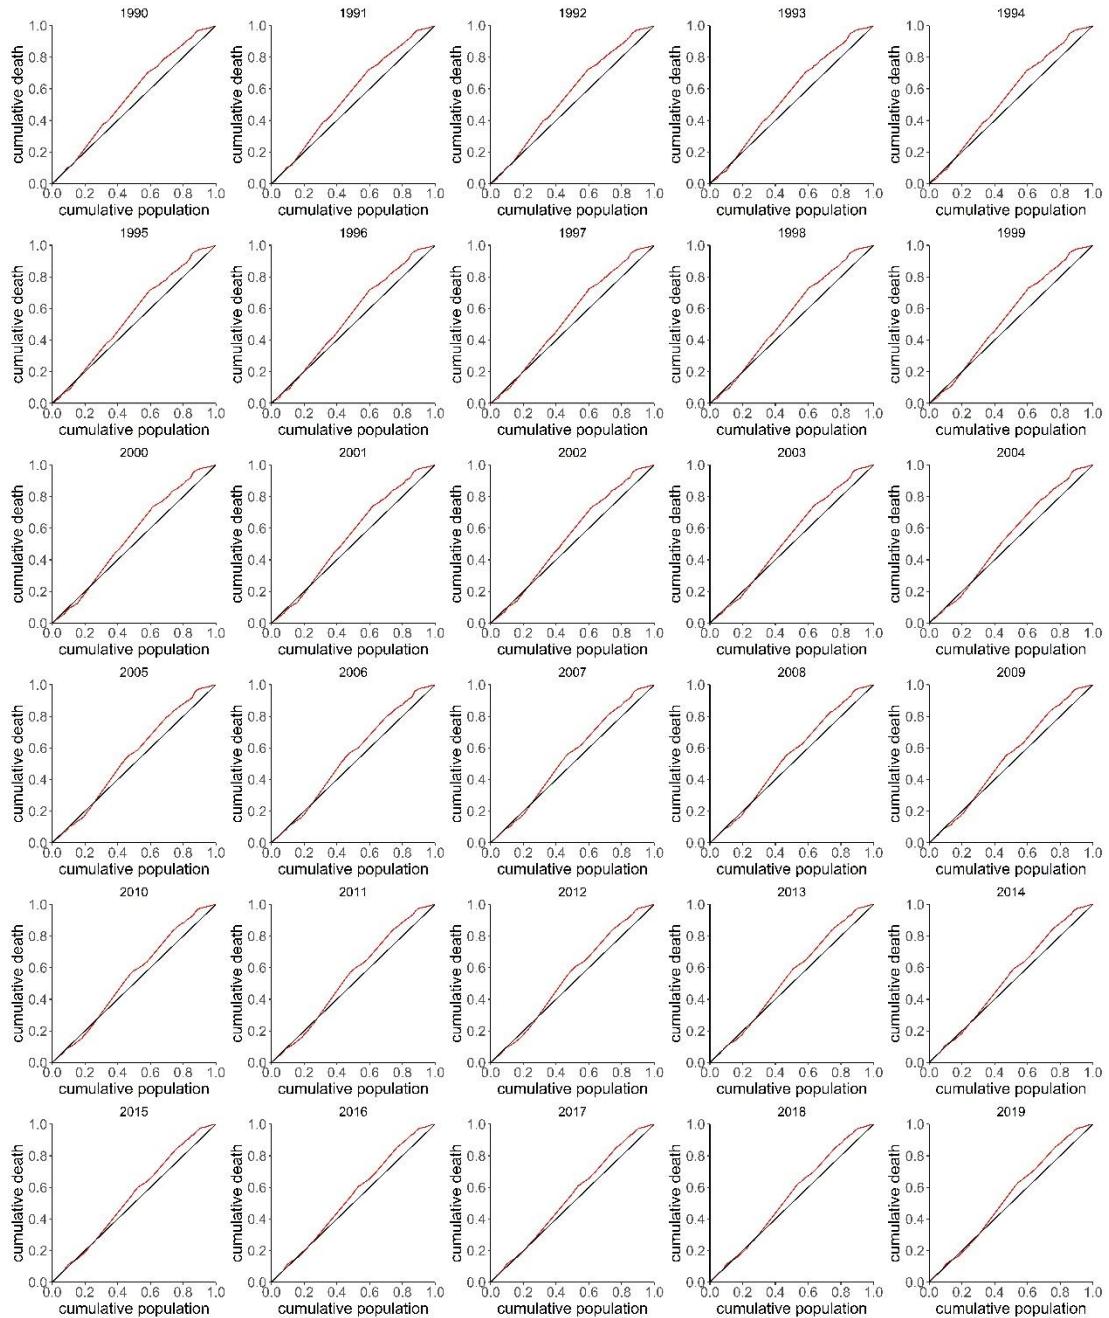

2019. NTUIs: Non-transport unintentional injuries; SDI: Socio-demographic index.

Supplementary Figure 6: Country-level association between ASMRs of NTUIs and SDI in 1990 – 2019, by region. We only plot the countries with NTUIs ASMRs of <50 per 100,000 for the beauty of the figure, and 18 points was not displayed in the figure due to this. ASMRs: Age-standardized mortality rates; NTUIs: Non-transport unintentional injuries; SDI: Socio-demographic index.

Supplementary Figure 7: Global concentration curve between death number of NTUIs and number of people in different SDI level, 1990 – 2019. NTUIs: Non-transport unintentional injuries; SDI: Socio-demographic index.

Supplementary Figure 8: Global concentration curve between death number of NTUIs and number of people in different HDI level, 1990 – 2019. Death caused by “exposure to forces of nature” and “other unintentional injuries” was excluded for analysis. HDI: Human development index; NTUIs: Non-transport unintentional injuries.

Supplementary Table 1: Overall NTUIs mortality among children and adolescents aged 5–24 in 2019 and annual change percentage of mortality during 1990–2019 by country and territory.

SDI 2019	SDI quintile	Country/territory	Age-standardized mortality rate per 100,000 population in 2019	Estimated annual change of mortality, % per year (95% CI)
0.343	Low SDI	Afghanistan	15.73	-2.44(-3.18, -1.71)
0.681	Middle SDI	Albania	7.45	-4.39(-5.23, -3.56)

Death due to “exposure to forces of nature” and “other unintentional injuries” was excluded. SDI: Socio-demographic index.

Supplementary Table 3: The association between mortality rate and SDI, by gender, age group, and region.

Group (n)	β-coefficient (95% CI)	SE	P-value
Global (6120)	-3.65 (-3.75 to -3.54)	0.055	<0.001
Global male (6120)	-3.66 (-3.76 to -3.55)	0.055	<0.001
Global female (6120)	-3.72 (-3.83 to -3.60)	0.059	<0.001
Age 5–9 years (6120)	-4.77 (-4.89 to -4.75)	0.063	<0.001
Age 10–14 years (6120)	-3.90 (-4.02 to -3.78)	0.061	<0.001
Age 15–19 years (6120)	-3.30 (-3.41 to -3.18)	0.059	<0.001
Age 20–24 years (6120)	-3.06 (-3.17 to -2.95)	0.056	<0.001
East Asia and Pacific* (1110)	-3.97 (-4.24 to -6.75)	0.141	<0.001
Europe and Central Asia (1560)	-7.79 (-8.02 to -7.57)	0.115	<0.001
Latin America and Caribbean (1050)	-3.66 (-4.01 to -3.31)	0.178	<0.001
Middle East and North Africa* (630)	-2.88 (-3.03 to -2.72)	0.078	<0.001
North America* (90)	-7.08 (-7.82 to -6.34)	0.377	<0.001
South Asia (240)	-3.35 (-3.92 to -2.78)	0.293	<0.001
Sub-Saharan Africa (1440)	-1.91 (-2.03 to -1.80)	0.058	<0.001

The β-coefficient represents that the ASMR will decline for $(1 - e^{0.1 \times \beta\text{-coefficient}}) \times 100\%$ for every 0.1 increase in SDI. *In East Asia and Pacific, Middle East and North Africa, and North America, we choose the random-effect model because the P-value of the Hausman test >0.05, while in the remaining groups we choose the fix effect model. ASMR: Age-standardized mortality rate; CI: Concentration index; SDI: Socio-demographic index.

Supplementary Table 4: The changes of SII, RII, and CI, by gender, age group, and region, in 1990 and 2019.

Group	1990		2019			CI*
	–SII (95% CI) (1/100,000)	1/RII CI	–SII (95% CI) (1/100,000)	1/RII
