eTable 1. Hazard ratios (95\% confidence intervals) for bladder cancer according to coffee intake in the NIHAARP Diet and Health Study excluding participants who ever reported regularly smoking pipes or cigars ( $N=$ 377 040)

| Model adjustments | Coffee Intake (cups/day) |  |  |  | $P$-trend |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | None (ref.) ${ }^{\text {a }}$ | $\leq 1$ | 2 to 3 | $\geq 4$ |  |
| No. cases | 314 | 1216 | 1931 | 839 |  |
| Multivariable-adjusted ${ }^{\text {b }}$ | 1.00 | 1.01 (0.89-1.15) | 1.10 (0.97-1.24) | 1.12 (0.98-1.28) | 0.013 |

${ }^{\text {a }}$ Referent group was non-drinkers of coffee
${ }^{\mathrm{b}}$ Multivariable models additionally adjusted for age at study baseline (continuous), sex, smoking, race/ethnicity (non-Hispanic White, non-Hispanic Black, Hispanic, or Asian/Pacific Islander/American Indian/Alaskan Native), baseline cigarette smoking status (current, former, or never), number of cigarettes smoked per day (1-10, 11-20, 21-30, 31-40, 41-60, or $\geq 60$ ), time since quitting among former smokers ( $\geq 1$ to 4 , 5 to 9 , or $\geq 10$ years before baseline), body mass index ( $<18.5,18.5$ to $<25,25$ to $<30$, or $\geq 30 \mathrm{~kg} / \mathrm{m} 2$ ), level of education ( $\leq$ high school graduate, some college, or college graduate), alcohol consumption ( $0,<1,1-2$, or $\geq 3$ drinks/day), self-reported general health status (excellent/very good, good, or fair/poor), total energy intake (kcal/day, continuous), nutrient density-adjusted fruit intake (servings/day, continuous), nutrient-density-adjusted vegetable intake (servings/day, continuous), supplement use (yes or no), physical activity (never/rarely, 1-3 times/month, 1-2 times/week, 3-4 times/week, $\geq 5$ times/week), history of diabetes (yes or no), and family history of cancer (yes or no)
eTable 2. Hazard ratios (95\% confidence intervals) for bladder cancer according to coffee intake in the NIHAARP Diet and Health Study by caffeine-type ( $N=469$ 047)

| Model adjustments | Coffee Intake (cups/day) |  |  |  | $P$-trend |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | None (ref.) ${ }^{\text {a }}$ | $\leq 1$ | 2 to 3 | $\geq 4$ |  |
| Caffeinated ${ }^{\text {b }}$ |  |  |  |  |  |
| No. cases | 383 | 831 | 1831 | 962 |  |
| Age, sex | 1.00 | 1.20 (1.07-1.36) | 1.51 (1.36-1.69) | 1.96 (1.74-2.21) | <0.0001 |
| Age, sex, smoking ${ }^{\text {c }}$ | 1.00 | 1.04 (0.93-1.18) | 1.15 (1.03-1.28) | 1.22 (1.08-1.38) | 0.0004 |
| Multivariable-adjusted ${ }^{\text {d }}$ | 1.00 | 1.03 (0.91-1.16) | 1.11 (0.99-1.24) | 1.20 (1.06-1.35) | 0.001 |
| Decaffeinated ${ }^{\text {b }}$ |  |  |  |  |  |
| No. cases | 383 | 741 | 793 | 265 |  |
| Age, sex | 1.00 | 1.22 (1.07-1.37) | 1.55 (1.37-1.75) | 1.82 (1.56-2.13) | <0.0001 |
| Age, sex, smoking ${ }^{\text {c }}$ | 1.00 | 1.11 (0.98-1.25) | 1.21 (1.07-1.37) | 1.21 (1.04-1.42) | 0.0005 |
| Multivariable-adjusted ${ }^{\text {d }}$ | 1.00 | 1.09 (0.96-1.23) | 1.17 (1.03-1.33) | 1.18 (1.00-1.38) | 0.003 |

${ }^{a}$ Referent group was non-drinkers of coffee (any type)
${ }^{\text {b }}$ Caffeinated ( $0, \leq 1,2-3$, or $\geq 4$ cups/day), decaffeinated ( $0, \leq 1,2-3$, or $\geq 4$ cups/day), and missing coffee intake (yes or no) were simultaneously adjusted for in a single model. Type of coffee consumed (caffeinated or decaffeinated) among coffee drinkers was based on the type of coffee the participant reported drinking more than half of the time over the past year; an indicator variable represented coffee drinkers who were missing data on caffeine type
${ }^{\text {c }}$ Smoking adjustment included baseline cigarette smoking status (current, former, or never), number of cigarettes smoked per day (1-10, 11-20, 21-30, 31-40, 41-60, or $\geq 60$ ), time since quitting among former smokers ( $\geq 1$ to 4,5 to 9 , or $\geq 10$ years before baseline), and having ever smoked pipes or cigars (yes or no) ${ }^{d}$ Multivariable models additionally adjusted for age at study baseline (continuous), sex, smoking, race/ethnicity (non-Hispanic White, non-Hispanic Black, Hispanic, or Asian/Pacific Islander/American Indian/Alaskan Native), body mass index ( $<18.5$, 18.5 to $<25,25$ to $<30$, or $\geq 30 \mathrm{~kg} / \mathrm{m} 2$ ), level of education ( $\leq$ high school graduate, some college, or college graduate), alcohol consumption ( $0,<1,1-2$, or $\geq 3$ drinks/day), self-reported general health status (excellent/very good, good, or fair/poor), total energy intake (kcal/day, continuous), nutrient density-adjusted fruit intake (servings/day, continuous), nutrient-density-adjusted vegetable intake (servings/day, continuous), supplement use (yes or no), physical activity (never/rarely, 1-3 times/month, 1-2 times/week, 3-4 times/week, $\geq 5$ times/week), history of diabetes (yes or no), and family history of cancer (yes or no)
eTable 3. Examination of homogeneity of associations between coffee drinking and bladder cancer over follow-up time in the NIHAARP Diet and Health Study

| Subgroup, years from <br> baseline to diagnosis ( $n$ ) | Coffee Intake (cups/day) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | None (ref.) ${ }^{\text {a }}$ | $\leq 1$ | 2 to 3 | $\geq 4$ | P-trend |
| $<5$ years ( $n=469$ 047) | No. cases | 75 | 406 | 618 | 304 |  |
|  | HR (95\% CI) ${ }^{\text {b }}$ | 1.00 | 1.28 (1.00-1.64) | 1.30 (1.01-1.65) | 1.43 (1.11-1.86) | 0.04 |
| 5 to $<10$ years ( $n=440361$ ) | No. cases | 128 | 530 | 849 | 432 |  |
|  | HR ( $95 \% \mathrm{Cl})^{\text {b }}$ | 1.00 | 0.99 (0.81-1.20) | 1.02 (0.84-1.23) | 1.15 (0.93-1.40) | 0.04 |
| $\geq 10$ years ( $n=393$ 475) | No. cases | 180 | 720 | 1253 | 517 |  |
|  | HR (95\% CI) ${ }^{\text {b }}$ | 1.00 | 1.01 (0.85-1.19) | 1.15 (0.98-1.35) | 1.09 (0.92-1.30) | 0.07 |

${ }^{\text {a }}$ Referent group was non-drinkers of coffee
${ }^{\mathrm{b}}$ All models were adjusted for age at study baseline (continuous), sex, cigarette smoking status (current, former, or never), number of cigarettes smoked per day (1-10, 11-20, 21-30, $31-40,41-60$, or $\geq 60$ ), time since quitting among former smokers ( $\geq 1$ to 4,5 to 9 , or $\geq 10$ years before baseline), and having ever smoked pipes or cigars (yes or no). Additional covariates in the multivariable models included race/ethnicity (non-Hispanic White, non-Hispanic Black, Hispanic, or Asian/Pacific Islander/American Indian/Alaskan Native), body mass index ( $<18.5,18.5$ to $<25,25$ to $<30$, or $\geq 30 \mathrm{~kg} / \mathrm{m} 2$ ), level of education ( $\leq$ high school graduate, some college, or college graduate), alcohol consumption ( $0,<1,1-2$, or $\geq 3$ drinks/day), self-reported general health status (excellent/very good, good, or fair/poor), total energy intake (kcal/day, continuous), nutrient density-adjusted fruit intake (servings/day, continuous), nutrient-density-adjusted vegetable intake (servings/day, continuous), supplement use (yes or no), physical activity (never/rarely, 1-3 times/month, 1-2 times/week, 3-4 times/week, $\geq 5$ times/week), history of diabetes (yes or no), and family history of cancer (yes or no)
