MIREC – Maternal–Infant Research on Environmental Chemicals Study, IQR – Interquartile range,

CRP-C-reactive protein, IL-6-Interluekin-6, IL-8-Interluekin-8, $TNF\alpha-Tumour$ necrosis factor-alpha, CI-confidence interval

^aPercent difference represents the percentage difference in biomarker levels compared to referent group (lowest category of exposure).

^bModel for CRP controlled for recruitment centre, alcohol, income, activity, body mass index.

^cModel for IL–6 controlled for recruitment centre, maternal age, outside time, body mass index, folic acid, main heating, furnace.

^dModel for IL-8 controlled for recruitment centre, maternal age, alcohol, income, activity, body mass index, folic acid

^eModel for TNFα controlled for recruitment centre, maternal age, body mass index.

Differing final counts in models due to differing availability of covariates selected for each biomarker.

Table S2. Multivariable linear regression analysis for the relationship between longer-term PM_{2.5} and NO₂ exposure

and biomarkers of inflammation in MIREC participants

Exposure	Biomarker and Percent Change ^a	95% CI	p-value
	CRP ^b (n=1,080)		
PM _{2.5} (per IQR increase)			
Trimester 3 average	20.9%	-1.0, 49.2	0.07
Pregnancy average	-5.8%	-27.4, 22.1	0.64
NO ₂ (per IQR increase)			
Trimester 3 average	9.4%	-12.2, 36.3	0.44
Pregnancy average	-3.9%	-25.9, 23.4	0.73
	IL-6° (n=1,003)		
PM _{2.5} (per IQR increase)			
Trimester 3 average	-0.1%	-16.5, 18.5	0.99

Pregancy average	0.1%	-18.9, 23.4	0.99
	IL-8 ^d (n=1,072)		
PM _{2.5} (per IQR increase)			
Trimester 3 average	8.3%	-3.9, 20.9	0.18
Pregancy average	6.2%	-7.7, 22.1	0.38
NO ₂ (per IQR increase)			
Trimester 3 average	0.5%	-10.4, 12.7	0.92
Pregancy average	2.0%	-10.4, 17.4	0.73
	TNF α ^e (n=1,083)		
PM _{2.5} (per IQR increase)			
Trimester 3 average	1.0%	-7.7, 11.6	0.79
Pregancy average	4.1%	-7.7, 16.2	0.53
NO ₂ (per IQR increase)			
Trimester 3 average	-1.9%	-10.4, 8.3	0.71
Pregnancy average	4.1%	-6.8, 16.2	0.49

MIREC - Maternal-Infant Research on Environmental Chemicals Study, IQR - Interquartile range, CRP - Creactive protein, IL-6 – Interluekin-6, IL-8 – Interleukin-8, TNFα – Tumour necrosis factor-alpha, CI – confidence interval

^aPercent difference represents the percentage increase in biomarkers per IQR difference in pollutant.

^bModel for CRP controlled for recruitment centre, alcohol, income, activity, body mass index.

^cModel for IL-6 controlled for recruitment centre, maternal age, outside time, body mass index, folic acid, main heating, furnace.

^dModel for IL-8 controlled for recruitment centre, maternal age, alcohol, income, activity, body mass index, folic

 $^{^{\}circ}$ Model for TNF α controlled for recruitment centre, maternal age, body mass index. Differing final counts in models due to differing availability of covariates selected for each biomarker.

Table S3. Sensitivity analyses for the relationships between short-term PM_{2.5} and NO₂ exposures, excluding women

with preeclampsia, IGT, and gestational diabetes in MIREC participants

Exposure	Biomarker and Percent Change ^a	95% CI	p-value
	CRP ^b (n=770)		
PM _{2.5} (per IQR increase)			
14 day average	19.7%	0.1, 39.1	0.02
30 day average	15.0%	0.0, 36.3	0.09
NO ₂ (per IQR increase)			
14 day average	18.5%	0.0, 44.8	0.11
30 day average	16.2%	0.0, 44.8	0.17
	IL–6 ^c (n=772)		
PM _{2.5} (per IQR increase)			
30 day average	-0.3%	-12.2, 12.7	0.96
14 day average	-0.1%	-13.1, 13.9	0.99
NO ₂ (per IQR increase)			
30 day average	5.1%	-12.2, 24.6	0.59
14 day average	10.5%	-7.7, 32.3	0.27
	IL-8 ^d (n=763)		
PM _{2.5} (per IQR increase)			
30 day average	3.1%	-3.9, 11.6	0.38
14 day average	-1.9%	-9.5, 7.3	0.70
NO ₂ (per IQR increase)			
30 day average	1.0%	-8.6, 12.7	0.81
14 day average	-0.1%	-11.3, 11.6	0.98
	$TNF\alpha^{e}$ (n=771)		
PM _{2.5} (per IQR increase)			
30 day average	1.0%	-9.5, 8.3	0.76
14 day average	2.0%	-4.9, 9.4	0.60
NO ₂ (per IQR increase)			
30 day average	-1.0%	-10.4, 8.3	0.81
14 day average	-0.9%	-9.5, 9.4	0.86

IGT – Impaired glucose tolerance, MIREC – Maternal–Infant Research on Environmental Chemicals Study, IQR – Interquartile range, CRP - C-reactive protein, IL-6 - Interluekin-6, IL-8 - Interleukin-8, TNFα - Tumour necrosis factor–alpha, CI – confidence interval

^aPercent difference represents the percentage increase in biomarkers per IQR difference in pollutant.

^bModel for CRP controlled for recruitment centre, alcohol, income, activity, body mass index.

^cModel for IL-6 controlled for recruitment centre, maternal age, outside time, body mass index, folic acid, main heating, furnace.

^dModel for IL-8 controlled for recruitment centre, maternal age, alcohol, income, activity, body mass index, folic

 $^{^{\}circ}$ Model for TNF α controlled for recruitment centre, maternal age, body mass index. Differing final counts in models due to differing availability of covariates selected for each biomarker.

Table S4. Sensitivity analyses for the relationships between short–term $PM_{2.5}$ and NO_2 exposures, excluding CRP levels > 100 mg/L in MIREC participants

Exposure	Biomarker and Beta Coefficient ^a	95% CI	p–value
	CRP ^b (n=1,028)		
PM _{2.5} (per IQR increase)			
14 day average	15.0%	1.0, 29.7	0.03
30 day average	8.3%	-4.9, 23.4	0.24
NO ₂ (per IQR increase)			
14 day average	3.1%	-12.2, 20.9	0.74
30 day average	3.1%	-13.1, 22.1	0.75

MIREC – Maternal–Infant Research on Environmental Chemicals Study, IQR – Interquartile range, CRP – C–reactive protein, CI – confidence interval

^aPercent difference represents the percentage increase in biomarkers per IQR difference in pollutant.

^bModel for CRP controlled for recruitment centre, alcohol, income, activity, body mass index.

Table S5. Sensitivity analyses for the relationships between short–term PM_{2.5} and NO₂ exposures, controlling for blood–lead levels in MIREC participants

Exposure	Biomarker and Percent Change ^a	95% CI	p-value
	CRP ^b (n=1,079)		
PM _{2.5} (per IQR increase)

MIREC - Maternal-Infant Research on Environmental Chemicals Study, IQR - Interquartile range, CRP - Creactive protein, IL-6 - Interluekin-6, IL-8 - Interleukin-8, TNFα - Tumour necrosis factor-alpha, CI confidence interval

^aPercent difference represents the percentage increase in biomarkers per IQR difference in pollutant.

^bModel for CRP controlled for recruitment centre, alcohol, income, activity, body mass index, and blood-lead levels.

^cModel for IL–6 controlled for recruitment centre, maternal age, outside time, body mass index, folic acid, main heating, furnace, and blood–lead levels.

^dModel for IL-8 controlled for recruitment centre, maternal age, alcohol, income, activity, body mass index, folic acid, and blood-lead levels.

 $^{^{}e}$ Model for TNF α controlled for recruitment centre, maternal age, body mass index, and blood–lead levels. Differing final counts in models due to differing availability of covariates selected for each biomarker.

Figures

Figure S1. DAG used to identify important covariates in relationships of interest.

Figure S2. Restricted cubic spline plot for relationship between average 14-day PM_{2.5} and C-reactive protein, adjusted for for recruitment centre, alcohol, income, activity, body mass index (3 knot placements at 5, 50, 95th percentiles).

Figure S3. Restricted cubic spline plot for relationship between average 30-day PM_{2.5} and C-reactive protein, adjusted for for recruitment centre, alcohol, income, activity, body mass index (3 knot placements at 5, 50, 95th percentiles).
