

SDC 1 (Fundus examination pictures) legends:

1A : Day 13 of illness revealed active vitritis, optic nerve swelling, arteriolar sheathing and extensive circumferential peripheral necrotic retinitis in the left eye with a normal right eye.

1B: Day 21 of illness showed early features of focal retinitis and vasculitis (white arrow) in the previously healthy right eye. The left eye necrosis resolved but still showed significant inflammation and vitritis

1C: Day 34 of illness showed right eye retinitis lesion resolved. Left eye showed signs of tractional retinal detachment (black arrow) that necessitated surgery.
